

**Clarification One**

Chapter 4 of the *Congestion Management Process* shows vehicle miles traveled (VMT) and vehicle hours traveled (VHT) for 2003, 2006, and 2030. The 2006 and 2030 values were based on the current travel demand model, which includes a greater level of detail than the previous travel demand model used to calculate 2003 values. Given that two different models were used for calculations, the values from 2003 are not directly comparable to those from 2006 and 2030 as suggested in Table 4-1.

**Clarification Two**

VMT and VHT are defined on page 23 of the *Congestion Management Process*. For clarification purposes, the formulas used to calculate VMT and VHT are shown below:

$$\Sigma \text{ VMT} = \Sigma (\text{24-hour segment volume} * \text{segment distance})$$

$$\Sigma \text{ VHT} = \Sigma (\text{24-hour segment volume} * (\text{segment distance} / \text{running speed}))$$
