**Akron Metropolitan Area Transportation Study
Citizens Involvement Committee
Virtual Meeting**

Thursday, May 8, 2025
6:30 p.m.

Agenda

1. **Welcome**
2. **Introductions**
3. **Items**
 - A. Discussion of Attachment 6A – Approving the Transportation Improvement Program for FY 2026-2029.
 - B. Discussion of Attachment 6B – Adopting *Transportation Outlook 2050* – The AMATS Regional Transportation Plan.
 - C. Transportation Management Area Certification Process Presentation by Federal Certification Team.
4. **Open Discussion**
5. **Adjournment 7:45 P.M.**

Next Regular Meeting:
Thursday, August 7, 2025 - 6:30 p.m.

All mailout material is available on the AMATS Web Site at www.amatsplanning.org

**Akron Metropolitan Area Transportation Study
Policy Committee
Thursday, March 27, 2025 – 1:30 p.m.**

Minutes of Meeting

Recordings of AMATS committee meetings are available in the *Past Meetings* page of the agency web site at <https://www.amatsplanning.org/past-meetings>.

I. Call to Order

- A. Chairman Jenkins** called the meeting to order. The attending members constituted a quorum.
- B. Chairman Jenkins** praised Mayor Judge for presiding over the February 13, 2025 meeting of the AMATS Policy Committee in his role as vice chairman.
- C. Audience Participation**

None.

II. Minutes – Motion Required

A. Approval of Minutes

Members were asked to approve the minutes of the February 13, 2025 meeting.

Motion

Bobbie Beshara made a motion to approve the minutes and it was seconded by William B. Judge. The motion was approved by a voice vote.

III. Staff Reports

A. Financial Progress Report

Curtis Baker presented Attachment 3A.

Motion

Rocco Yeargin made a motion to approve the Financial Progress Report and it was seconded by Caitlin Elrad. The motion was approved by a voice vote.

B. Technical Progress Report

Matt Stewart said that AMATS continues to follow developments regarding federal funding. **Mr. Stewart** said that AMATS' suballocated funds, such as STBG, CRP, CMAQ, and TASA funds, remain available. A number of

discretionary federal funding programs, which were paused, have resumed. **Mr. Stewart** noted that federal transportation funding is authorized through September 2026.

The Ohio General Assembly recently unanimously approved a two-year state transportation bill totaling \$11.5 billion. Gov. DeWine is expected to sign the bill.

The ODOT Transportation Review Advisory Council (TRAC) released its list of Major/New Improvement Projects. The TRAC recommended 14 projects for funding out of 26 applications totaling \$319 million. One of the projects – the Interstate 77/state Route 8 Corridor Improvement Project (PID 114865) - is in Summit County.

The Ohio Active Transportation Conference hosted by ODOT is scheduled for late April.

AMATS has been developing the Draft FY 2026-2029 TIP and the Draft *Transportation Outlook 2050*.

C. AMATS Federal Funds Report

Amy Prater presented Attachment 3C.

Ms. Prater presented tables concerning STBG, CRP, CMAQ, and TASA Funding Program and Balances dated March 11, 2025.

IV. Old Business

A. Draft Transportation Improvement Program FY 2026-2029.

Ms. Prater presented Attachment 4A.

Motion

Jim Bowling made a motion to approve the Draft Transportation Improvement Program FY 2026-2029 and it was seconded by **Carol Siciliano-Kilway**. The motion was approved.

B. Draft Transportation Outlook 2050.

Mr. Stewart presented Attachment 4B.

Motion

Carol Siciliano-Kilway made a motion to approve the Draft Transportation Outlook 2050 and it was seconded by **Bobbie Beshara**. The motion was approved.

V. New Business

None.

VI. Resolutions

- A. **Resolution 2025-04 – Approving Amendment #12 to the FY 2024-2027 Transportation Improvement Program to delete three projects.**

Ms. Prater presented Attachment 6A.

Motion

Thomas Sheridan made a motion to approve Resolution 2025-04 and it was seconded by Jim Bowling. The motion was approved.

VII. Other Business

- A. **Access Ohio 2050 Update – Randy Lane, ODOT Statewide Planning Manager.**

Chairman Jenkins and Mr. Baker introduced Randy Lane, the statewide planning manager with the ODOT Statewide Planning Research Office. Mr. Baker explained that *Access Ohio 2050* is the state equivalent of the draft long-range regional transportation plan. ODOT is seeking public feedback from local officials regarding the state planning process for future projects contained in *Access Ohio 2050*.

Randy Lane made a presentation regarding the *Access Ohio 2050* Update.

Mr. Lane said that the department will host a 1-3 p.m. stakeholder engagement meeting and a 5-6:30 p.m. public engagement meeting regarding the *Access Ohio 2050* Update at the ODOT District 4 office on May 21.

Chairman Jenkins thanked Mr. Lane for his presentation.

VIII. Adjournment

- A. The next regularly scheduled Policy Committee meeting is scheduled for **1:30 p.m. on Thursday, May 15, 2025.**

Motion

Carol Siciliano-Kilway made a motion to adjourn the meeting and it was seconded by Caitlin Elrad. The motion was approved.

There being no other business, the meeting was adjourned.

**Akron Metropolitan Area Transportation Study
Technical Advisory Committee
Thursday, March 20, 2025 – 1:30 p.m.**

Minutes of Meeting

Recordings of AMATS committee meetings are available in the *Past Meetings* page of the agency web site at <https://www.amatsplanning.org/past-meetings>.

I. Call to Order

- A. **Chairman Finney** called the meeting to order. The attending members constituted a quorum.

II. Minutes – Motion Required

A. **Approval of Minutes**

Members were asked to approve the minutes of the February 6, 2025 meeting.

Motion

Tony Demasi made a motion to approve the minutes and it was seconded by Wayne Wiethe. The motion was approved by a voice vote.

III. Staff Reports

A. **Financial Progress Report**

Curtis Baker presented Attachment 3A.

Motion

*Wayne Wiethe made a motion to approve the Financial Progress Report and it was seconded by **Bobbie Beshara**. The motion was approved by a voice vote.*

B. **Technical Progress Report**

Matt Stewart said that AMATS has been developing the Draft FY 2026-2029 TIP and the Draft *Transportation Outlook 2050*.

Mr. Stewart said that most federal funding is authorized through September 2026, but noted that discretionary federal funding programs have been paused and are being reviewed. **Mr. Stewart** said that the Ohio Senate approved a state transportation budget bill recently.

ODOT Safety Program funding applications are due March 31.

C. **AMATS Federal Funds Report**

Amy Prater presented Attachment 3C.

Ms. Prater presented tables concerning STBG, CRP, CMAQ, and TASA Funding Program and Balances dated March 11, 2025.

Chairman Finney asked where AMATS secured the \$2.1 million STBG loan.

Ms. Prater said that OKI made the loan to AMATS which will be returned next year.

IV. **Old Business**

A. **Draft Transportation Improvement Program FY 2026-2029.**

Ms. Prater presented Attachment 4A.

Motion

Bobbie Beshara made a motion to approve the Draft Transportation Improvement Program FY 2026-2029 and it was seconded by **Mike Jones**. The motion was approved.

B. **Draft Transportation Outlook 2050.**

Mr. Stewart presented Attachment 4B.

Joe Hadley asked whether AMATS was required to list the public comments received regarding the Draft *Transportation Outlook 2050* and the agency's responses to comments received. **Mr. Stewart** responded that the agency may not be required to present comments and responses, but it is the agency's practice to do so.

Motion

Joe Hadley made a motion to approve the Draft Transportation Outlook 2050 and it was seconded by **Jim McCleary**. The motion was approved.

V. **New Business**

None.

VI. **Resolutions**

A. **Resolution 2025-04 – Approving Amendment #12 to the FY 2024-2027 Transportation Improvement Program to delete three projects.**

Ms. Prater presented Attachment 6A.

Mr. Demasi asked whether the three projects listed in Resolution 2025-04 were in the Draft FY 2026-2029 TIP approved by the TAC under Item 4A. **Ms. Prater** explained that state Route 43 project (PID 121376) in Kent listed in Resolution

2025-04 is being rescheduled to FY 2029, which will be in the next TIP, while the Stow Hike & Bike Trail (PID 113016) and the Hudson Veterans Rails to Trail (PID 116868) projects are being rescheduled to FY 2030, which is beyond the next TIP. **Ms. Prater** explained that these changes were necessary to demonstrate fiscal constraint in the Draft FY 2026-2029 TIP and were the easiest to reschedule.

Mr. Wiethe noted that the changes were deemed acceptable by the sponsoring communities during a recent TAC TIP Subcommittee meeting.

Motion

*Wayne Wiethe made a motion to approve Resolution 2025-04 and it was seconded by **Tony Demasi**. The motion was approved.*

VII. Other Business

None.

VIII. Adjournment

The next regularly scheduled TAC meeting will be at **1:30 p.m. on Thursday, May 8, 2025.**

Motion

***Bobbie Beshara** made a motion to adjourn the meeting and it was seconded by **Wayne Wiethe**. The motion was approved.*

There being no other business, the meeting was adjourned.

**Akron Metropolitan Area Transportation Study
Citizens Involvement Committee
Thursday, March 20, 2025 – 6:30 p.m.**

Meeting Summary

Attendees:

Pete Mohan
Nick Muffet

Staff:

Curtis Baker, AMATS Planning Director
Seth Bush, Geographic Information Systems (GIS) Coordinator
Jeff Gardner, Transportation Planner
Amelia Hoffmeier, GIS Planner
Matt Mullen, Transportation Planner
Matt Stewart, Planning Administrator

I. Welcome

Matt Stewart welcomed the AMATS Citizens Involvement Committee (CIC) meeting attendees.

II. Discussion Items

- A. Mr. Stewart** presented Attachment 4A – Draft Transportation Improvement Program FY 2026-2029.

Nick Muffet asked whether the PowerPoint Presentation slides that Mr. Stewart used for his presentation regarding the Draft Transportation Improvement Program (TIP) could be made available to the public. **Mr. Stewart** said that the slides could be made available to the public through the agency’s website – **amatsplanning.org** – or he could email them to Mr. Muffet.

- B. Mr. Stewart** presented Attachment 4B – Draft Transportation Outlook 2050.

- C. Pete Mohan** introduced himself to the meeting attendees as a trail analyst and volunteer for the Portage Parks District. **Mr. Mohan** added that he has a website – **bikeportage.com**.

Mr. Mohan asked what the next steps are related to the development of the Rubber City Trail. **Mr. Stewart** said that Phase II construction of the trail is scheduled for next year. **Mr. Stewart** noted that several phases of construction must occur before the trail is connected to the Ohio & Erie Towpath Trail. **Mr. Stewart** said that approximately one mile of the trail is completed, and that Phase II is expected to complete an additional three-quarters of a mile.

Mr. Mohan asked if Phase II would extend south from the current trail segment. **Mr. Stewart** said no and described the next segment's terminus.

Mr. Mohan asked when the Ravenna Road bridge reconstruction project is scheduled. **Mr. Stewart** said that the project has been rescheduled to 2026 due to railroad issues.

The attendees discussed the proposed Lake Rockwell Trail Project in Portage County.

- D. Mr. Muffet** said that he was covering the meeting on behalf of *Signal Akron*.
- E. Mr. Stewart** invited the attendees to the upcoming April 2 and April 3 public meetings regarding the Draft *Transportation Outlook 2050*.

III. Adjournment

There being no other business, the meeting was adjourned.

The next meeting of the CIC is scheduled for **6:30 p.m.** on **Thursday, May 8, 2025**.

FROM: AMATS Staff

RE: AMATS Federal Funds Report

DATE: May 1, 2025

AMATS is officially in the 4th quarter of Fiscal Year 2024. Most of the AMATS projects have been encumbered or have been bid and should encumber soon. Please see below for updates for the remainder of this fiscal year by funding source.

STBG

One remaining project received good bids and will award/encumber soon.

CRP

The remaining project has bid opening on May 7th.

CMAQ

Two projects are accepting bids and should encumber soon. The other remaining project has a bid opening on May 7th. OSUCC, the statewide CMAQ committee, has agreed to cover the approximately \$3.8 million deficit that AMATS has this year.

TASA

Three preliminary engineering phase projects are expected to encumber soon. Two construction phase projects have opening bids on May 6th and May 7th and plan to encumber funds this fiscal year. AMATS must secure a loan for TASA; however, the amount will be based on what projects are actually going to encumber this fiscal year. Currently, we need just over \$600,000.

The Final Draft AMATS Transportation Improvement Program FY 2026-2029 will be presented later in this meeting. No projects are expected to slip into FY 2026, but if they do they will be added as amendments to this TIP, once it is approved in July 2025. Also, later in calendar year 2025, AMATS will be accepting applications for another round of funding. The TAC-TIP Subcommittee will review the Funding Policy Guidelines for potential changes soon.

AKRON METROPOLITAN AREA TRANSPORTATION STUDY

MEMORANDUM

TO: Policy Committee
Technical Advisory Committee
Citizens Involvement Committee

FROM: AMATS Staff

RE: Resolution 2025-05 - Adopting the AMATS Transportation Improvement Program FY 2026-2029

DATE: May 1, 2025

The Transportation Improvement Program Fiscal Years 2026 through 2029 (TIP FY 2026-2029) contains a comprehensive listing of regional transportation improvement projects scheduled for implementation with federal or state funds within the next four years. The *TIP FY 2026-2029* was developed by the AMATS staff in conjunction with all AMATS committees, area transit operators, the Ohio Department of Transportation (ODOT) and US DOT.

The *AMATS TIP FY 2026-2029* incorporates just under \$1.07 billion in funding throughout the AMATS area. The program includes approximately \$416.7 million for highway projects, \$526.0 million for public transit needs, and \$8.4 million for bike and pedestrian projects. The remaining funds are reserved for debt services totaling \$65.0 million and other miscellaneous expenditures totaling \$56.7 million.

The AMATS area includes Summit and Portage counties and the Chippewa and Milton townships in Wayne County. The full TIP document follows ODOT's *Ohio TIP Guidance Template* and contains the following chapters and appendices:

Chapters

1. Introduction
2. Performance Based Planning and Programming
3. Air Quality Conformity
4. Demographics
5. Title VI and ADA Compliance
6. Public Involvement
7. Previous TIP Accomplishments
8. Projects
9. Fiscal Constraint Analysis
10. Approval Resolution

Appendices

- A. Air Quality Conformity
- B. Public Outreach
- C. Self Certification Resolution
- D. Funding Policy Guidelines
- E. Ohio STIP Revision Guidelines

In addition to listing projects to be funded, federal regulations derived from the *Infrastructure Investment and Jobs Act (IIJA)* require that the TIP demonstrate financial balance, air quality conformity, performance measures and include opportunities for public comment. A summary of each of these activities follows:

Financial Balance

The *IIJA* requires that a financial plan be included, demonstrating that the TIP can be implemented with the financial resources expected to be available over the next four years. For this purpose, *Chapter 9 - Fiscal Constraint Analysis* is included in the TIP. This chapter summarizes highway and transit revenues and project costs. Highway and transit cost information were drawn from *Chapter 8 - Projects*.

The fiscal constraint analysis indicates that sufficient federal, state and local funds are expected to be available to support the projects included in the TIP for FY 2026-2029.

Air Quality Conformity

The Air Quality Conformity Analysis forecasts the mobile emissions generated by vehicles using the transportation system recommended in the upcoming *Transportation Outlook 2050*, the area's next Regional Transportation Plan. The analysis is required to forecast emissions relating to ozone and PM_{2.5} pollutants. The results of the analysis demonstrate that the emissions of ozone and PM_{2.5} do not exceed the level of emissions established by the Ohio EPA in the State Implementation Plan (SIP).

All of the projects in the TIP that require air quality analysis were included in *Appendix A - Air Quality Analysis*. This analysis confirms that the TIP FY 2026-2029 is in conformity with the SIP.

Performance Measures

Performance measures are central to implementing a performance-based planning process that guides decision making. Federal regulations require agencies such as AMATS to consider safety, infrastructure condition, congestion reduction, system reliability, freight movement and economic vitality to prioritize the programming of transportation projects. AMATS is also required to consider Transit Asset Management (TAM) planning as part of its efforts to maintain the area's transit capital resources in a state of good repair. Performance measures are discussed in greater detail in *Chapter 2 – Performance Based Planning and Programming*.

Public Comment

The public was given the opportunity to review and comment on the second draft of the TIP FY 2026-2029 from March 11 through April 11. A virtual public meeting occurred at the Citizens Involvement Committee meeting on March 20, 2025 at 6:30p.m. A press release, written notices, newspaper advertisements and social media were utilized to notify the public of the TIP public involvement period and meeting. Public Involvement is discussed in *Chapter 6 – Public Involvement* and additional information can be found in *Appendix B – Public Outreach*.

Staff Recommendation

Currently, the final draft *AMATS TIP FY 2026-2029* is available on the “Funding” and “Reports & Data” sections of AMATS website located at amatsplanning.org. It is expected that the Federal Highway Administration and Federal Transit Administration will approve this document by the end of June. On July 1, 2025, the new TIP is expected to become official. With federal approval, the Final *AMATS TIP FY 2026-2029* will be available on the same pages of the AMATS website.

The Staff recommends approval of the final draft *AMATS TIP FY 2026-2029*.

RESOLUTION NUMBER 2025-05

**OF THE METROPOLITAN TRANSPORTATION POLICY COMMITTEE
OF THE AKRON METROPOLITAN AREA TRANSPORTATION STUDY**

**ADOPTING THE AMATS TRANSPORTATION IMPROVEMENT PROGRAM FY
2026-2029**

WHEREAS, the Akron Metropolitan Area Transportation Study (AMATS) is designated as the Metropolitan Planning Organization (MPO) by the Governor, acting through the Ohio Department of Transportation (ODOT) and in cooperation with locally elected officials in Summit and Portage counties and the Chippewa Township and Milton Township areas of Wayne County; and

WHEREAS, AMATS has, pursuant to 23 United States Code 134, and relevant federal regulations, prepared a Transportation Improvement Program for Fiscal Years 2026 through 2029 (TIP FY 2026-2029); and

WHEREAS, AMATS has carried out public involvement activities consistent with the AMATS Public Participation Plan during the period of March 11 through April 11 and conducted a public meeting on March 20, 2025; and

WHEREAS, a fiscal constraint analysis was conducted demonstrating that adequate funding is available to finance the projects programmed in the Transportation Improvement Program; and

WHEREAS, the Clean Air Act Amendments of 1990 require that AMATS make a determination, in cooperation with NOACA, ERPC and ODOT, that Transportation Outlook 2050 is in conformity with respect to Ohio's State Implementation Plan (SIP) for attainment of the 2008 and 2015 8-hour ozone standards and the 2006 and 2012 fine particulate matter standards; and

WHEREAS, a quantitative air quality analysis of the *AMATS TIP FY 2026-2029* and *Transportation Outlook 2050*, the area's regional transportation plan, has been completed in accordance with the requirements specified by *Infrastructure Investment and Jobs Act (IIJA)*; and

WHEREAS, the projects programmed in the *AMATS TIP FY 2026-2029* are consistent with *Transportation Outlook 2050*, the area's regional transportation plan, and were included in the air quality analysis completed for the 2050 Plan and found to be in conformity with the State Implementation Plan; and

WHEREAS, the development of performance measures is required in order to foster transparency and accountability, and help track transportation system improvement at regional, state, and national levels; and

RESOLUTION NUMBER 2025-05 (Continued)

WHEREAS, the Ohio Department of Transportation (ODOT) has established performance targets for safety, infrastructure condition, congestion reduction and system reliability according to federal guidance and timetables; and

WHEREAS, AMATS supports ODOT efforts and targets for these performance measures as further discussed in Chapter 2 - *Performance Based Planning and Programming* in the *AMATS TIP FY 2026-2029*.

NOW THEREFORE BE IT RESOLVED:

1. That this Committee adopts the *AMATS TIP FY 2026-2029* and recommends that its members incorporate these improvements into their transportation improvement programming for their governmental units.
2. That this Committee affirms that the public had adequate opportunity to comment on the *AMATS TIP FY 2026-2029*.
3. That this Committee affirms the consistency of the Transportation Improvement Program with available federal, state and local funding sources.
4. That this Committee approves supporting the Ohio Department of Transportation's statewide targets for all applicable transportation performance measures as described in the attached memorandum and *Chapter 2 – Performance Based Planning and Programming* of the TIP: safety, National Highway System (NHS) pavement conditions, interstate bridge conditions, level of travel time reliability and level of truck time reliability.
5. That this Committee agrees to plan and program projects so that they contribute toward the achievement of ODOT's current targets for each performance measure as described in *Chapter 2 – Performance Based Planning and Programming*, of the *AMATS TIP FY 2026-2029*.
6. That this Committee agrees to plan and program projects in support of air quality goals in coordination with ODOT, NOACA and ERPC.
7. That this Committee agrees to plan and program projects in support of METRO RTA and PARTA Transit Asset Management (TAM) plans.
8. That this Committee affirms the consistency between the *AMATS TIP FY 2026-2029*, the area's regional transportation plan (*Transportation Outlook 2050*) and the State Implementation Plan for air quality.

RESOLUTION NUMBER 2025-05 (Continued)

10. That this Committee authorizes the Staff to provide copies of this Resolution to the appropriate agencies as evidence of action by the Metropolitan Transportation Policy Committee.

Larry D. Jenkins, Jr., P.E., P.S., 2025 Chairman
Metropolitan Transportation Policy Committee

Chapter 1 | Introduction

What is the Transportation Improvement Program?

A Transportation Improvement Program (TIP) is a four-year program outlining all federally funded transportation improvements within a region. The TIP includes several components, but central to the TIP is a list of prioritized projects that are fiscally constrained based on the federal transportation funding coming into the region.

TIPs are developed throughout the United States, and federal laws require Metropolitan Planning Organizations (MPOs) to oversee the responsibility of developing the TIP within each of the nation's urbanized areas. The Akron Metropolitan Area Transportation Study (AMATS) is the designated MPO for Summit and Portage counties and Northeastern Wayne County. AMATS is tasked with developing the TIP in a continuing, cooperative and comprehensive (3C) manner with the Ohio Department of Transportation (ODOT) and area transit operators.

This TIP covers State Fiscal Years 2026 through 2029. AMATS' TIP was developed in concert with ODOT, which oversees each region's concurrent TIP development. ODOT compiles each regional TIP into a statewide TIP—also called a STIP—which is then reviewed and approved by the Federal Highway Administration (FHWA) and the Federal Transit Administration (FTA).

The projects identified in the TIP are prioritized with funding through federal, state and local revenues. The program maintains a balance of local and regional needs and includes projects from all modes of ground transportation including highways, public transportation or transit, bicycles and pedestrians.

The TIP provides a schedule by which to coordinate projects among jurisdictions and transportation agencies and serves as a guide for implementation of short-and-medium range transportation planning. The TIP also serves as a source of information for the public and any transportation stakeholders curious about the region's program of projects.

Any regional transportation project that will utilize federal transportation funds must be included on the AMATS TIP. Because of this provision, the AMATS Policy Committee has considerable control on the use of federal transportation funds in the AMATS study area.

Federal Funding

The Infrastructure Investment and Jobs Act, also known as IIJA, was enacted into law on November 15, 2021. This transportation bill guarantees funding for highway, highway safety, pedestrian and bicycle, freight, EV and transit and bridge projects through the end of Fiscal Year 2026. The IIJA contains almost 100 programs and grants, including many new discretionary/competitive sources of funding. Some of the suballocated programs that AMATS directly administers are Surface Transportation Block Grant Program (STBG), Congestion Mitigation/Air Quality program (CMAQ), Transportation Alternatives Set Aside (TASA), Carbon Reduction Program (CRP), and metropolitan planning (PL). AMATS works closely with the region's two transit partners—METRO RTA and PARTA—who oversee federal transit-related funds including the 5307, 5310, and 5339 programs.

TIP Development Process

Although the TIP is typically developed on a biennial basis, several other events occur within the continuing, cooperative and comprehensive transportation planning cycle. The TIP's submittal is a significant action formally setting into motion a project's financial commitment, but the programming and management of future projects is something that occurs long before and long after a TIP is finalized.

Before a project becomes programmed into a TIP, substantial work takes place at AMATS to understand trends, needs and issues within the regional transportation system. AMATS produces a variety of reports to this effect, most of which directly feed into the development of the Region's Transportation Plan. AMATS' Plan is referred to as *Transportation Outlook*, and it forecasts more than 20 years into the future. AMATS is currently preparing a Plan update to the year 2050 (TO2050). Prior to the TO2050 planning process, these input documents provide valuable information for AMATS members, transportation stakeholders, and interested citizens. All of this work is developed and shared with these groups, and easily accessible on the AMATS website. Some of these documents include:

Report/Plan	Summary Description
Congestion Management Process	Assessment of where and to what degree the region's roadway congestion occurs and strategies to manage and reduce congestion without causing other issues
Planning Data Forecast	A report that lays out current population and employment trends and seeks to forecast what the Greater Akron Region could look like into the future
Annual Crash Report	A three-year examination of crash data and trends within the region and development of a high-crash list ranking the sections and intersections of concern
Safe Streets for All Action Plan	A comprehensive safety plan that includes a five-year examination of crash data and trends, development of a high-injury network of fatal and serious injury crash hotspots, and development of strategy, project, and transit recommendations for eliminating the most serious crashes.
Freight Plan	Examination of the current truck and rail freight networks, areas of heavy freight activity, and recommendations to improve the movement of freight into and through the region
Transit Plan	Examination of the current transit coverage within the region and recommendations for goals and strategies to improve and sustain transit coverage
Public Participation Plan	A plan that outlines ways the agency seeks to encourage an open planning process that supports early and sustained public involvement, timely public notice, and full public access to information regarding key transportation decisions within the Greater Akron area.
Active Transportation Plan	A plan that shows existing and future/desired active transportation connections (e.g. trails, bike lanes) and identification of additional recommendations for improving the active transportation network
Highway Preservation Needs Report	An overview of the current and forecasted roadway and bridge preservation needs for the region and a forecast of the funding necessary to maintain the highway system in a state of decent repair.

The findings and recommendations of these input documents feed directly into the fiscally constrained TO2050. TO2050's development is an intensive process that directly involves public and stakeholder input.

Needs and issues identified through these myriad plans, in many cases, eventually lead to project ideas that seek funding for implementation. Ultimately, both TO2050 and its input documents directly influence communities'

and agencies' decisions on what future projects get developed and help stakeholders understand the most pressing needs and priorities for the region. Potential project sponsors consider all the data and recommendations from these plans, often also undergoing their own supplemental planning processes and community input.

AMATS, being the agency tasked with planning and funding transportation projects for Greater Akron, has an exceptionally important role to play in this continuing process. Specifically, AMATS announces open calls for project applications.

Project selection typically occurs on a biennial basis, often in the "off years," or years when a TIP is not updated and submitted. Working alongside ODOT, AMATS typically awards funding several fiscal years into the future based on existing allocations. Project development usually takes several years and so it is necessary to have a pipeline of funded projects further into the future.

AMATS is the agency responsible for program management for several federal funding programs in which sponsors apply for project funding. To provide a systematic method for developing and modifying the TIP for projects that utilize AMATS suballocated federal funds, the AMATS Policy Committee has adopted the *AMATS Funding Policy Guidelines, attached in Appendix D*. These guidelines define the criteria to be used in scoring and selecting projects that will eventually be included in the TIP. The *AMATS Funding Policy Guidelines* are typically updated before each call for projects, and decisions about scoring criteria are based on the decisions made by AMATS' committee members. Their decisions are based on the technical recommendations from AMATS staff and the result of comprehensive conversations between staff and AMATS members. Perhaps more importantly, these recommendations and conversations are based directly on guidance from all of the planning documents outlined earlier in this section.

The current funding policy was adopted in September 2023 and establishes the criteria to be used in selecting projects to be included in the TIP. The policy:

- establishes a standing subcommittee of the Technical Advisory Committee (TAC) that is responsible for monitoring TIP funding, reviewing project applications, and making recommendations to the Policy Committee,
- determines the criteria by which projects are evaluated and scored,
- establishes the maximum amount of STBG, CRP, and TASA funding that can be allocated to any project via AMATS for preliminary engineering, right-of-way or construction,
- defines and describes eligibility and program policies for various Federal Transit Administration funding programs (Sections 5307, 5310 and 5339 Funding), and
- requires a minimum of 20% local funding for most programs, unless using toll revenue credit.

Decisions about how most of AMATS' Highway funding sources (STBG, STBG-Resurfacing, CRP, TASA) are allocated to applicants are based on *AMATS Funding Policy Guidelines* and the input of AMATS TAC TIP Subcommittee and the AMATS Policy Committee. One exception is the Congestion Management and Air Quality (CMAQ) program. Since 2014, CMAQ projects have been awarded via a statewide CMAQ Program Committee—of which AMATS is a member—which also sets the program's policies, procedures, and project selection criteria.

The most competitive project applications are selected for funding, for both AMATS-controlled funding programs and the statewide committee-selected CMAQ program. These projects get programmed into further-out years, and then typically are placed onto the new TIP when development begins. AMATS staff works closely with both highway and transit project sponsors to ensure that projects continue to advance. The AMATS' TIP Coordinator matches projects to available funding for each source per fiscal year.

A TIP is much more than its project listings. Several other components account for other important planning considerations. Developing a program of projects necessitates consideration of how projects satisfy federal performance measures, public input and Title VI requirements, and many other important considerations. The chapters listed on the following page outline these various other components of the TIP.

Development of the 2026-2029 TIP—both the project listings and the other considerations outlined above—began in the fall of 2024, after ODOT directed MPOs such as AMATS to begin developing a program of projects. This work was fine-tuned, and the first draft of the TIP was submitted to ODOT at the end of January 2025. AMATS then shared the draft project listing with its Technical Advisory, Policy, and Citizens Involvement Committees and discussed the draft TIP at a high level. ODOT and USDOT provided review comments in early March, which AMATS staff incorporated into a second draft document. AMATS prepared this document for a public involvement period that began on March 11, 2025 and concluded on April 11, 2025.

During the public involvement period, citizens and other transportation stakeholders were encouraged to comment on the draft TIP. AMATS presented the TIP during the Citizens Involvement Committee meeting on March 20. Online comment forms were available on the AMATS website and options to provide comments in person at the AMATS office or call staff directly to discuss comments were also advertised. Further details about the public comment period can be found in Chapter 6 and Appendix B.

AMATS continued to make minor modifications to the TIP based on the advancement of previously programmed projects. The final TIP was submitted to ODOT by the April 30 deadline and is planned for approval by the AMATS Policy Committee on May 15, 2025.

Upon the submission of the AMATS TIP to ODOT, it will be combined with other Ohio regions' TIPs, packaged into a Statewide TIP (STIP). The STIP will be reviewed by the United States Department of Transportation (USDOT) between May 1 and June 30 in order to be officially approved on July 1, 2025.

Even after final submittal and approval of the STIP, it continues as a dynamic, living document. Periodically, it is necessary to revise the allocated funds originally laid out in the TIP. Common issues that occur include projects not advancing according to schedule, projects requiring additional funds because a project phase estimate may increase, or projects not utilizing all programmed TIP funds because a bid comes in lower than the estimated amount. Occasionally, entire projects are cancelled and then that funding must be allocated elsewhere. All changes to TIP projects are regularly monitored and updated to reflect such changes. Small movements of funds are called Administrative Modifications while larger, more impactful changes to the TIP are classified as Amendments, which require concurrence from AMATS' Policy Committee. All TIP Modifications are required to be shared with an MPO's decision-making body.

TIP Document Summary

AMATS 2026-2029 TIP follows the format recommended in ODOT's *Ohio TIP Guidance Template*. The following pages contain nine more chapters and a set of appendices.

Chapter 1 —	Introduction
Chapter 2 —	Performance Based Planning and Programming
Chapter 3 —	AQ Conformity
Chapter 4 —	Demographics
Chapter 5 —	Title VI and ADA Compliance
Chapter 6 —	Public Involvement
Chapter 7 —	Previous TIP Accomplishments
Chapter 8 —	Projects
Chapter 9 —	Fiscal Constraint Analysis
Chapter 10 —	Approval Resolution

The appendices focus on documenting that the AMATS TIP conforms to federal requirements and includes supporting information:

Appendix A —	Air Quality Analysis
Appendix B —	Public Outreach
Appendix C —	Self-Certification Resolution
Appendix D —	Funding Policy Guidelines
Appendix E —	Ohio STIP Revisions Guidelines

Chapter 2 | Performance Based Planning and Programming

Introduction

Current federal legislation and guidance feature an emphasis on performance measurement. This focus is consistent with AMATS goals and objectives, which promote the transparency of public data and decision-making and seeks to improve the accountability of public spending by better linking investments to outcomes.

Performance measures are central to implementing a Performance Based Planning Process (PBPP) that guides decision making. How performance is defined and measured can significantly affect the types of projects and strategies that are advanced by decision makers. Moreover, performance results inform agencies whether the types of projects and strategies they are implementing are in fact helping them achieve their goals. Performance measures aim to answer questions about whether the performance of the transportation system is getting better or worse over time. Performance measures also aim to demonstrate whether transportation investments are correlated or linked to stated goals and whether they produce desired outcomes.

Introducing a performance management approach to planning is intended to improve project and program delivery, inform investment decision making, focus staff efforts on priorities, and provide greater transparency and accountability to the public. Current federal guidelines apply performance measurements at the programmatic, rather than project level and link performance measures and targets to funding decisions by way of performance-based funding. The purpose of this approach is to move towards performance-based decision-making for project selection in the future.

The US DOT and ODOT continue to develop performance targets in consultation with MPOs like AMATS, and others. State investments must make progress toward these performance targets, and MPOs must incorporate these performance measures and targets into their Transportation Improvement Programs (TIPs) and long-range Regional Transportation Plans. Federal guidance imposes financial penalties on states that fail to make progress toward these performance goals.

There are seven areas for which the US DOT has established national performance goals. These areas are:

- Safety
- Infrastructure Conditions
- Congestion Reduction
- System Reliability
- Freight Movement and Economic Vitality
- Environmental Sustainability
- Reduced Project Delivery Delays

To implement performance measure goals, US DOT has developed measures and minimum standards for states to follow. In the transportation planning process, the public and other stakeholders articulate a strategic direction that is based on a shared vision for the future.

Goals and Objectives stem from the area's vision and goals, and they address key desired outcomes. Agencies like AMATS create objectives—which are specific, measurable statements—that shape planning priorities.

Performance Measures support objectives and are the basis for comparing alternative improvement strategies, investment and policy strategies, and tracking results.

Driven by data on performance, along with public involvement and policy considerations, AMATS conducts analyses that inform investment and policy priorities.

- **Identify Trends and Targets** – Trends and targets let agencies compare alternative strategies. This step relies on baseline data from past trends, tools to forecast future performance, and information on possible strategies, available funding, and other constraints.
- **Identify Strategies and Analyze Alternatives** – Scenario analysis may also be used to compare alternative strategies and funding levels, or to explore funding levels required to achieve certain performance goals.
- **Develop Investment Priorities** – To reach investment targets, AMATS will create a TIP and a Regional Transportation Plan that consider priorities and tradeoffs.

Programming involves selecting specific projects to include in the TIP. In a performance-based planning approach, agencies make programming decisions based on whether those decisions support performance targets or contribute to desired trends.

Performance based planning is founded on evidence that the process leads agencies to their goals. The following evaluation activities happen throughout implementation and when needed throughout performance-based planning.

- **Monitoring** – Gathering information on actual conditions.
- **Evaluation** – Conducting analysis to understand whether implemented strategies have been effective.
- **Reporting** – Communicating information about system performance and whether policymakers, stakeholders, and the public think plans and programs are effective.

In a performance-based planning approach, each step in the process is clearly connected to the next so that goals translate into specific measures. Those measures then become the basis for selecting and analyzing strategies for the long-range plan. Ultimately, project selection decisions are influenced by expected performance returns. Keeping the next step in the process in mind is critical to each step along the way.

The Ohio Department of Transportation (ODOT) has provided a complete overview of performance measures, data and progress with its report, *The State of Ohio Transportation System Performance*:

www.transportation.ohio.gov/programs/statewide-planning-research/statewide-transportation-planning/01-transportation-system-performance-report

Safety – PM1

23 CFR 490.207 requires states to establish five safety performance measures and set targets for those measures to demonstrate fatal and serious injury reductions on all public roads. The figure below shows the safety performance measures, baselines, and targets. These measures are evaluated on a 5-year rolling average. Safety performance measures are designated as category 1: PM1.

Federal legislation requires MPOs like AMATS to establish performance targets and set targets that demonstrate fatal and serious injury reductions on all public roads. The required performance measures for safety are:

- Number of fatalities
- Fatality rate
- Number of serious injuries
- Serious injury rate
- Number of non-motorized fatalities and serious injuries

In accordance with federal legislation, ODOT used a five-year average to calculate baseline safety statistics. These baseline figures are the benchmarks to which all future calculations will be compared. All future values will also be calculated using five years of data. This five-year rolling average is used to smooth out short-term year-to-year fluctuations. A full discussion of safety planning and the identification of safety needs for the AMATS area can be found in the current traffic crash technical memorandum. This memorandum also includes analyses of bicycle and pedestrian safety data. The memorandum is updated annually.

After reviewing historical crash trends, external factors and through consultation with the state's MPOs, ODOT established a 2 percent annual reduction target across all five safety categories statewide. ODOT developed a baseline using calendar year (CY) 2019-2023 for setting the CY 2025 safety targets. A state is considered to have met or made significant progress if at least four of the five targets are better than the baseline performance. AMATS Policy Resolution 2024-18 (September 2024) affirms support for ODOT's statewide safety targets for calendar year (CY) 2025.

The baselines used to set the targets are (CY 2019-2023):

- 1,228.2 fatalities
- 7,790.5 serious injuries
- 1.12 fatality rate (per 100 million vehicle miles traveled (VMT))
- 6.77 serious injury rate (per 100 million VMT)
- 842.4 non-motorized fatalities and non-motorized serious injuries

CY 2025 Targets for Ohio are:

- 1,180 fatalities
- 7,482 serious injuries
- 1.08 fatality rate
- 6.51 serious injury rate
- 809 non-motorized fatalities and non-motorized serious injuries

Crash data specific to the AMATS area can be found in the *Traffic Crashes and Safety Performance Measures (2021-2023) Report*, approved in December 2024. For statewide and regional data, ODOT provides a full safety analysis on its dashboard website:

<https://app.powerbigov.us/view?r=eyJrljoiNDJiMjhlMDEtOTU2OC00YjBmLWlxNzgtY2Y3ZTMwZTE0MDI3liwidCI6ljUwZjhmY2M0LTk0ZDgtNGYwNy04NGViLTM2ZWQ1N2M3YzhhMij9>

The table below shows the current status of safety target performance statewide.

Ohio Statewide Safety Performance				
Performance Measure	2023 Performance	2023 Target	Target Met?	2025 Target
Fatalities	1,228	< 1,173	No	< 1,180
Fatality Rate	1.12	< 1.04	No	< 1.08
Serious Injuries	7,791	< 7,649	No	< 7,482
Serious Injury Rate	6.77	< 6.77	No	< 6.51
Non-Motorized Fatalities & Serious Injuries	842.4	< 824	No	< 809

Notes:

1. All safety measures are rolling 5-year averages.
2. Rates are expressed as events per 100 million vehicle miles traveled (VMT).
3. Targets for 2023 and 2025 are a 2% annual reduction from the baseline performance (for 2021 and 2023, respectively).

The table below shows the total projects and amount of money that is being invested to improve the safety of the AMATS area transportation system. Funding costs are for the TIP period FY 2026-2029, for projects categorized as safety-related. Projects costs include multiple funding sources in addition to safety program (HSIP) funds. The following project list is derived from the specific Individual list of projects and does not include the non-specific Group listing.

FY 2026-2029 Safety-Related Projects					
PID	Project Name	Work Type	Project Termini	Project Description	Total Project Estimate
112869	SUM East Ave Ph 1 (Tallmadge)	Roadway Improvement (Safety)	Community Rd (2.37) to Portage County Line (4.56)	Widen East Avenue (CR 630), a center two-way left turn lane, sidewalks. Identified as a high priority segment in ODOT's HSIP. Phase 1 (Recreation Center Dr. to Parliament Dr.)	\$14,218,294
116917	SUM S Arlington Rd (Green)	Add Through Lane(s)	S Arlington Rd just south of Boettler Rd to just north of September Dr	Widening S Arlington Rd from 2 to 4 lanes and includes new roundabouts at Boettler Rd and Southwood Dr, includes new sidewalks.	\$21,922,841
116929	SUM SR 91/Terex Rd (Hudson)	Intersection Improvement (Safety)	SR 91/Terex Rd	Intersection improvement at SR 91 and Terex Rd, improves left turn lanes	\$570,022
118500	POR SR 59 02.93 (Kent)	Roadway Improvement (Safety)	POR SR 59 from 2.925 to 3.797	Roadway improvements to SR 59 in the Kent area, reducing lane widths, improving sidewalks, ADA curb ramps, mid-block pedestrian crossings, new ADA accessible bus stops and shelters and upgrading pedestrian signals.	\$7,438,234
120949	SUM SR 0532 00.80 (Mogadore)	Traffic Control (Safety)	SUM SR 532 and Albrecht Ave	Install new signal at SUM SR 532 and Albrecht Ave in the Village of Mogadore.	\$358,113
121067	SUM Highland Rd (Macedonia)	Intersection Improvement (Safety)	Highland Rd between I-271 and S Bedford Rd, and S Bedford Rd between Highland Rd and Blue Jay Trl	Intersection improvement at Highland Rd and SR 8, new signal, new turn lanes along Highland Rd, new right turn lane on S Bedford Rd, new sidewalk on S Bedford Rd, and new signal at the Highland/S Bedford Rd intersection.	\$2,950,600
121287	SUM CR 0135 02.60 (Killian Rd)	Intersection Improvement (Safety)	Intersection of Killian Rd and Pickle Rd	New roundabout at Killian Rd (CR 135) and Pickle Rd (CR 70) in Springfield Township, improved sight distance, curb ramps, sidewalks, ADA curb ramps, etc.	\$2,640,600
121457	SUM Graham Rd Signals (Stow)	Traffic Control (Safety)	Graham Rd from Bailey Rd to Newcomer Rd	Replace and upgrade signals on Graham Rd between Bailey Rd and Newcomer Rd.	\$3,575,000
121598	SUM Wooster Rd/Hopocan Ave (Barberton)	Intersection Improvement (Safety)	Wooster Rd N and W Hopocan Ave	Construct a roundabout at the intersection of Wooster Rd N and W Hopocan Ave in the City of Barberton.	\$2,634,715
121863	SUM State Rd Ph 2 (Cuy. Falls)	Roadway Minor Rehab	Quick Rd to Wyoga Lake Rd	State Rd between Quick Rd and Wyoga Lake Rd, pavement replacement, new center two way left turn lane, new roundabout at the State Rd/Quick Rd intersection, new sidewalk on State Rd.	\$15,000,000
Total					\$71,308,418

The following table summarizes all safety-related project spending over the FY 2026-2029 TIP period. The figures include ODOT Group projects programmed in the AMATS area.

Summary – TIP Projects Improving Safety ¹			
Total Safety Projects	Total Safety \$ (Millions)	Projects with HSIP \$	HSIP \$ (Millions)
39	\$64.9	10	\$21.9

1a Projects that have safety program funding; or

1b Projects containing funding with one of the following federal improvement codes (Safety, Safety & Education of Pedestrians/Bicycles).

Projects include ODOT Line Item listed projects. Note: HSIP funding is coded as SAC 4HJ7.

Infrastructure Conditions – PM2

23 CFR 490.307 and 23 CFR 490.407 establish performance measures to evaluate the condition of Ohio's National Highway System (NHS) pavements and bridges. The table below shows these performance measures along with their baselines, 2-year targets, and 4-year targets. Infrastructure condition performance measures are designated as category 2: PM2. The table also shows that AMATS is assisting in meeting statewide infrastructure conditions targets.

Infrastructure Condition Measures and Targets - PM2						
Performance Measure	Baseline (2021)	2-Year Performance (2023)	2-Year Target (2023)	4-Year Target (2025)	2-Year Target Met?	Trend
Interstate Pavement Condition						
% Good	72.9%	75.4%	> 55%	> 55%	Yes	
% Poor	0.1%	0.1%	< 1%	< 1%	Yes	
Non-Interstate NHS Pavement Condition						
% Good	46.4%	50.4%	> 40%	> 40%	Yes	
% Poor	1.9%	1.3%	< 2%	< 2%	Yes	
NHS Bridge Conditions						
% Good	60.9%	60.8%	> 55%	> 55%	Yes	
% Poor	2.0%	2.0%	< 3%	< 3%	Yes	

The tables below show the projects and amount of money that is being invested to maintain and improve pavement and bridge conditions in the AMATS area during the FY 2026-2029 TIP period. The projects listed are derived from the Individual project list and does not include Group project listing. Group projects are usually sponsored by ODOT; or they are sponsored at 100 percent local funding by AMATS members in the area.

TIP Projects Improving Pavements			
Road Type	Number of Projects	Lane Miles Improved	Construction \$ (Millions)
Interstate	7	89	\$49.5
Non-Interstate NHS	16	126	\$40.2

TIP Projects Improving NHS Bridges		
Number of Projects	Bridges Improved	Construction \$ (Millions)
17	62	\$56.4

The AMATS Policy Committee has previously approved support for ODOT's statewide goals for pavement and bridge conditions. (See AMATS Policy Resolution 2022-14, approved August 2022). AMATS continues to support these targets and programs its projects with the goal of assisting ODOT in meeting these goals.

Travel Time Reliability, Congestion and Air Quality Measures – PM3

Travel Time Reliability

Level of Travel Time Reliability (LOTR) is defined as the ratio of the longer travel times (80th percentile) to a "normal" travel time (50th percentile). The measures are the percent of person-miles traveled on the relevant portion of the NHS that are reliable.

Truck Travel Time Reliability (TTTR) is the ratio generated by dividing the 95th percentile travel time by the normal time (50th percentile) for each Interstate segment. The TTTR Index is established by multiplying each segment's largest reliability ratio of five reporting periods by its length then dividing the sum of all length-weighted segments by the total length of Interstate.

The data to assess travel time reliability and establish targets is sourced from FHWA's National Performance Management Research Data Set (NPMRDS).

23 CFR 490.507 and 23 CFR 490.607 established performance measures for the Level of Travel Time Reliability on Ohio's NHS system. The table below shows these performance measures along with their baselines, 2-year targets, and 4-year targets.

System Reliability Measures and Targets - PM3					
Performance Measure	Baseline (2021)	2-Year Performance (2023)	2-Year Target (2023)	4-Year Target (2025)	2-Year Target Met?
Travel Time Reliability (TTR) - Interstates	98.8%	97.1%	> 85.0%	> 85.0%	Yes
Travel Time Reliability (TTR) - Non-Interstates	96.4%	95.9%	> 80.0%	> 80.0%	Yes
Truck Travel Time Reliability (TTTR) Index	1.19	1.22	< 1.50	< 1.50	Yes

The table below shows the total projects and amount of money that is being invested to improve travel time reliability on the NHS system in the AMATS area during the TIP period.

TIP Projects Improving Travel Time Reliability		
Road Type	Number of Projects	Construction \$ (Millions)
Interstate	1	\$13.8
Non-Interstate NHS	0	\$0

CMAQ Traffic Congestion Measures – PHED and Non-SOV Travel

23 CFR 490.707 established the national performance measures for assessing traffic congestion. These measures are applicable to all urbanized areas that include NHS mileage and have populations of over 200,000 (also known as Transportation Management Areas, or TMAs). In addition, these two measures are only applicable in

regions that are designated as non-attainment or maintenance areas for ozone (O₃), carbon monoxide (CO) or particulate matter (PM₁₀ and PM_{2.5}), based upon the National Ambient Air Quality Standards (NAAQS).

The two congestion performance measures are as follows:

- Annual Hours of Peak Hour Excessive Delay (PHED)

Peak Hour Excessive Delay (PHED) is based on the calculation of all segments of the National Highway System. PHED is defined as the extra amount of time spent in congested conditions defined by speed thresholds that are lower than a normal delay threshold. For this measure, the speed threshold is 20 mph or 60% of the posted speed limit, or whichever is greater. The FHWA requires that the data collected must occur during weekdays (Monday through Friday), with a required morning peak timeframe of 6:00am-10:00am, and a variable evening peak timeframe. This metric measures the number of hours of excessive traffic delay (per capita) each year.

The PHED measure formerly only applied to metropolitan areas with one million or more in population. However, as of 2022, urbanized areas of 200,000 or greater are now subject to the PHED measure. For this metric, excess delay is defined as travel time at 20 mph or 60% of the posted speed limit, whichever is greater, measured in 15-minute intervals during key travel windows.

- Percent of Non-Single Occupant Vehicle (Non-SOV) Travel

Mode share is a measure of the percentage by mode of all surface transportation occurring in the urbanized area. Modes of surface transportation include driving alone in a motorized vehicle (Single Occupancy Vehicle), car or van pooling, public transportation, commuter rail, walking, or bicycling, as well as travel that is avoided by telecommuting. Non-SOV travel, defined by the FHWA, applies to any travel occurring on modes other than driving alone in a motorized vehicle. An analysis of mode share includes a calculation of the percent of Non-SOV travel within the urbanized area. This metric, which is derived from the U.S. Census Bureau's American Community Survey (ACS) data, illustrates the percentage of an urbanized area's traffic in which multiple people are in a vehicle. Higher levels of Non-SOV travel can reduce an area's traffic congestion by removing additional vehicles from the roadways, and also lowering the amount of mobile emissions.

The table below shows the two-year, and four-year targets for peak hours of excessive delay (PHED) and non-single occupancy vehicle travel (Non-SOV) in the Ohio air quality urbanized areas. The data for this metric was derived from the American Community Survey Economic Characteristics table. The table shows the progress made toward achieving the PHED and Non-SOV targets. Note that the targets are being met over the last two years in the Northeast Ohio region.

Congestion Reduction Measures and Targets					
Performance Measure	Baseline (2021)	2-Year Performance (2023)	2-Year Target (2023)	4-Year Target (2025)	2-Year Target Met?
Annual Peak Hours of Excessive Delay (PHED) per Capita					
Akron Region	5.6	4.8	< 5.0	< 5.0	Yes
Canton Region	1.6	1.9	< 3.0	< 3.0	Yes
Cincinnati Region	7.1	6.1	< 9.0	< 9.0	Yes
Cleveland Region	6.8	6.5	< 21.0	< 21.0	Yes
Columbus Region	5.1	5.9	< 10.0	< 10.0	Yes
Dayton Region	6.3	6.9	< 7.2	< 7.2	Yes
Toledo Region	6.1	7.1	< 7.0	< 7.0	No
Percent of Non-Single Occupancy Vehicle (Non-SOV) Travel					
Akron Region	17.3%	19.4%	> 16.0%	> 16.0%	Yes
Canton Region	16.3%	17.7%	> 15.0%	> 15.0%	Yes
Cincinnati Region	20.0%	22.2%	> 18.5%	> 18.5%	Yes
Cleveland Region	20.6%	22.7%	> 18.5%	> 19.0%	Yes
Columbus Region	20.8%	24.0%	> 18.5%	> 19.0%	Yes
Dayton Region	18.1%	19.6%	> 16.1%	> 16.1%	Yes
Toledo Region	16.1%	17.6%	> 15.0%	> 15.0%	Yes

Projects that reduce the total number of vehicles on Ohio's roadways and those which improve traffic flow/reduce vehicle idling also contribute to the reduction in these mobile source pollutants. The tables below show projects and investments in the AMATS area that will assist in increasing Non-Single Occupancy Vehicle (Non-SOV) travel and reduce Peak Hour Excessive Delay (PHED). AMATS continues to support the two-year and four-year statewide targets which have been set by ODOT (AMATS Resolution 2022-14).

TIP Projects Improving Non-SOV Travel			
Total Non-SOV Projects	Total Non-SOV \$ (Millions)	Non-SOV Projects Using CMAQ	Non-SOV CMAQ Funds \$ M
12	\$8.4	4	\$0.3

TIP Projects Improving Peak Hour Excessive Delay			
Total PHED-Related Projects	PHED-Related \$ (Millions)	PHED Projects Using CMAQ	PHED CMAQ Funds \$ M

Past progress towards air quality improvements:

AMATS Area FY 2022 – 2025 CMAQ Projects Summary Emissions Benefits			
Fiscal Years	Nox Benefit (kg/day)	VOC Benefit (kg/day)	PM _{2.5} Benefit (kg/day)
2022 - 2023	11.9777	8.5831	0.9695
2024 - 2025	14.1348	8.4597	1.1183
Total	26.1125	17.0428	2.0878
AMATS Benchmark Contribution	25.00	15.00	2.00

Air Quality Measures

23 CFR 490.807 established the Total CMAQ Emission Reduction Performance Measures. These performance measures affect Ohio's U.S. EPA designated air quality nonattainment and maintenance areas. Ohio was required to set targets for its nonattainment and maintenance areas for the pollutants of Volatile Organic Compounds (VOCs), Nitrous Oxide (NOx), and Particulate Matter at 2.5 Micrometers in Diameter (PM2.5). The table below shows these performance measures along with their baselines, 2-year targets, and 4-year targets.

Air quality emissions reduction analyses calculate the total reduction in three mobile source (i.e. vehicle-based) pollutants: Volatile Organic Compounds (VOC), Oxides of Nitrogen (NOx), and Particulate Matter having a diameter of less than 2.5 micrometers (PM2.5).

The table below shows the on-road baseline, two-year, and four-year quantitative emissions targets for Volatile Organic Compounds (VOC), Oxides of Nitrogen (NOx), and Particulate Matter having a diameter of less than 2.5 micrometers (PM2.5). The baseline data was derived from the CMAQ Public Access System and aggregated by state and pollutant type for the years 2018-2021. The 2018-2022 baseline data listed below is for the AMATS area. The data for the two and four-year targets was estimated from CMAQ projects in the TIP for the years 2022-2025; however, AMATS chose to support the two-year and four-year statewide targets which have been set by ODOT. Data is expressed in kilograms of pollutant per day.

Statewide – CMAQ Funded Projects – Emissions Reduction Benefit					
2022 – 2023 Evaluation					
Environmental Sustainability Measures and Targets					
Performance Measure	Baseline (2018 – 2021)	2-Year Performance (2022 – 2023)	2-Year Target (2022 – 2023)	4-Year Target (2022 – 2025)	2-Year Target Met?
Total Emissions Reduction – VOC (kg/day)	320.195	144.106	> 60.000	> 60.000	Yes
Total Emissions Reduction – NOx (kg/day)	1018.130	222.595	> 250.000	> 250.000	No
Total Emissions Reduction – PM _{2.5} (kg/day)	246.405	18.78	> 30.000	> 18.200	No

The CMAQ program funds projects based on their estimated contribution toward the reduction of these mobile source pollutants. The table below shows the CMAQ funded projects for the FY 2026-2029 TIP period for the AMATS area. The projects listed below contribute to the Ohio statewide CMAQ mobile source emissions goals.

AMATS CMAQ Mobile Source Emissions Projects				
PID	Project Name	Work Group	Fiscal Year	Total Project Cost
118568	Rideshare Program	Miscellaneous	2026	\$100,000
117253	METRO Bus Purchase - Electric	Transit	2026	\$1,818,438
116416	PARTA Bus Purchase - Clean Diesel	Transit	2026	\$2,000,000
118569	Rideshare Program	Miscellaneous	2027	\$100,000
123138	Rideshare Program	Miscellaneous	2028	\$100,000
123139	Rideshare Program	Miscellaneous	2029	\$100,000
				\$4,218,438

Cleveland-Akron-Lorain Air Quality Non-Attainment Area

Summit County and Portage County are part of the U.S. Census-designated eight-county Cleveland-Akron-Lorain Combined Statistical Area (CSA). This area includes: Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, and Summit counties. Based on air quality readings, the United States Environmental Protection Agency (USEPA) designated this area as marginal non-attainment for the 2015 8-hour ozone standard, excluding Ashtabula County which is a maintenance area. The US EPA designated the entire eight-county area as a maintenance area for the 2008 8-hour ozone standard.

USEPA also designated seven counties and a township in this area (including Summit and Portage) as maintenance for PM_{2.5} (particulate matter) under the 2006 standard. These areas include Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, and Summit Counties, and Ashtabula Township in Ashtabula County.

Three Metropolitan Planning Organizations (MPOs) serve seven of these counties. The Northeast Ohio Areawide Coordinating Agency (NOACA) serves Cuyahoga, Geauga, Lake, Lorain, and Medina counties. AMATS serves Summit and Portage counties. The Erie Regional Planning Commission (ERPC) serves the City of Vermilion in Lorain County. Ashtabula County is not part of a Metropolitan Planning Organization.

The USDOT requires air quality conformity determinations every time a new TIP or Regional Transportation Plan is completed. This conformity analysis reflects the aggregate regional mobile emissions generated by vehicles using the transportation system recommended in the TIP and Regional Transportation Plan. Conformity is demonstrated when the forecasted regional emissions are below the applicable State Implementation Plan (SIP) budgets that have been established by Ohio EPA.

AMATS, NOACA and ERPC manage the transportation planning process in this non-attainment area and coordinate on air quality issues. Consequently, AMATS has coordinated with ODOT, NOACA and ERPC in developing the Cleveland urbanized area traffic congestion (PHED and Non-SOV) targets shown above.

Federal Requirements for CMAQ Project Funding

The Congestion Mitigation and Air Quality (CMAQ) program supports two important goals of the U.S. Department of Transportation: improving air quality and relieving congestion. Reducing congestion is a key objective of federal surface transportation policy. The costs of congestion can be an obstacle to economic activity. In addition, congestion can hamper quality of life through diminished air quality, lost personal time, and other negative factors. Accordingly, the CMAQ Program includes federal funds programmatically allocated to each state for funding applicable projects.

A CMAQ project must meet three basic criteria: it must be a transportation project, it must generate an emissions reduction, and it must be in or benefit a nonattainment or maintenance area. Additionally, as with all federal-aid projects, CMAQ projects must be included in the MPO's current transportation plan and Transportation Improvement Program (TIP), or the current Statewide Transportation Improvement Program (STIP) in areas without an MPO. In nonattainment and maintenance areas, the project also must meet the conformity provisions contained in section 176(c) of the Clean Air Act (CAA) and the transportation conformity regulations. Lastly, all CMAQ-funded projects need to complete National Environmental Policy Act (42 U.S.C. 4321 et seq.) (NEPA) requirements and satisfy the basic eligibility requirements under titles 23 and 49 of the United States Code.

AMATS and ODOT each receive CMAQ funding and allocate it annually to fund applicable projects. In 2012, ODOT created the Ohio Statewide Urban Congestion Mitigation and Air Quality CMAQ Program (OSUCC). The intent of the program is to more quickly advance eligible projects that improve air quality, reduce congestion, and eliminate delay/improve safety, in addition to utilizing statewide CMAQ funding in the year funds are allocated. OSUCC is administered as a subcommittee of the Ohio Association of Regional Councils (OARC) Executive Directors. OSUCC is charged with developing protocols for managing the program, along with project selection. The CMAQ Program provides approximately \$70 plus million annually, to Ohio's eight largest Metropolitan Planning Organizations (MPOs) with populations larger than 200,000.

OSUCC/AMATS opens the program for applications once every two years. The next project solicitation will most likely occur in spring of 2025. Projects are selected on various criteria, only one of which is estimated emissions reduction benefits. Projects are not required to have quantifiable emissions reduction benefits; a criteria-based assessment is sufficient. All projects awarded annually must be entered into the FHWA's CMAQ Public Access System (PAS). Data for the CMAQ Emissions Reduction performance measure for the region is taken from the quantified benefits included in the projects listed in the PAS that have been funded in the region. The Table above lists the quantified benefits included in the PAS for the AMATS area for recent years (2022 to 2025). Further information on the joint MPO/ODOT CMAQ project process can be found in the *AMATS Funding Policy Guidelines*.

Transit Asset Management (TAM)

Transit asset management (TAM) is a business model that prioritizes funding based on the condition of transit assets to achieve and maintain a state of good repair (SGR) for public transit assets. FTA rules establish a framework for transit agencies to monitor and manage transit assets, improve safety, increase reliability and performance, and establish performance measures in order to help transit agencies keep their systems operating smoothly and efficiently. See the Federal Transit Administration link for more information: <https://www.transit.dot.gov/regulations-and-guidance/asset-management/getting-started>

The regulations define the term "state of good repair" as requiring that public transportation providers develop and implement TAM plans and establish state of good repair standards and methods to measure performance for three asset categories in the AMATS area: equipment, rolling stock, and facilities.

The FTA's performance measures applicable to the AMATS area are:

- **Equipment:** The percentage of non-revenue (support and maintenance) vehicles that have either met or exceeded their useful life.
- **Rolling Stock:** The percentage of revenue vehicles (primarily buses and paratransit vehicles) that have either met or exceeded their useful life.
- **Facilities:** The percentage of facilities within an asset class with a condition rated below 3 on FTA's 1 to 5 scale to describe condition.

The AMATS planning area is served by two transit service providers: METRO RTA in Summit County and PARTA in Portage County. METRO and PARTA have each developed their own TAM plan. The TAM targets for each agency are established in the applicable TAM plan.

TAM targets are based on the condition of existing transit assets and planning investments in equipment, rolling stock, infrastructure, and facilities. The targets reflect the most recent data available on the number, age, and condition of transit assets, and capital investment plans for improving these assets.

METRO RTA and PARTA have established TAM targets for each of the applicable asset categories in its TAM plan. The targets are presented in the tables below.

Equipment

Equipment includes service vehicles and equipment not attached to or a part of a facility that has a replacement value greater than \$50,000. The following three tables provide definitions and examples of how to set targets for transit assets.

Equipment TAM Targets			
Asset Class (NTD)	Asset Class	Performance Target	Performance Measure
Non-Revenue Vehicle	Service Lift	100% less than 10 years old	30%
Equipment	Mobile Vehicle Lift	100% less than 10 years old	100%
Equipment	Generator	100% less than 10 years old	100%

Rolling Stock Vehicles

Rolling Stock Vehicles TAM Targets			
Asset Class (NTD)	Asset Class	Performance Target	Performance Measure
Bus	Heavy Duty Bus (B30-HD, B35-HD, B40-HD, B45-HD, B60-HD); Medium Duty Bus (B30-MD, B35-MD); Light Duty Bus (B30-LD)	< 40% older than 14 years	38%
Van	Accessible Vans (AV); (BSV); Converted Vans (CV); Modified Mini Van (MMV); (MV-1); Mini Vans (SMV)	< 35% older than 8 years	34%
Automobile	Automobile (AO)	< 50% older than 8 years	43%
Cut-Away Bus	LTL/LTN, LTV, LTV-FS, LTV-HC, LTV-N, LTV-S	< 20% older than 10 years	18%

Facilities

Facilities TAM Targets		
Asset Class	Performance Target	Performance Measure
Passenger Facilities	0% below a "3"	0%
Maintenance Facilities	< 22% below a "3"	16%
Administrative Facilities	< 38% below a "3"	16%

AMATS Area TAM Targets

AMATS agrees to support the respective METRO RTA and PARTA TAM targets, thus agreeing to plan and program projects in the TIP that – once implemented – are anticipated to make progress toward achieving each RTA's targets.

METRO RTA TAM Targets:

METRO RTA TAM Plan Targets							
Asset Category Performance Measure	Asset Class	2025 Target	2026 Target	2027 Target	2028 Target	2029 Target	2030 Target
REVENUE VEHICLES							
Age - % of revenue vehicles within a particular asset class that have met or exceeded their Useful Life Benchmark (ULB)	AB - Articulated Bus	0%	0%	0%	0%	0%	0%
	AO - Automobile						
	BR - Over-the-road Bus	0%	0%	0%	0%	0%	0%
	BU - Bus	0%	0%	0%	0%	0%	0%
	CU - Cutaway Bus	20%	0%	0%	0%	0%	0%
	DB - Double Decked Bus						
	FB - Ferryboat						
	MB - Mini-bus						
	MV - Mini-van	20%	0%	0%	0%	0%	0%
	RT - Rubber-tire Vintage Trolley						
	SB - School Bus						
	SV - Sport Utility Vehicle						
	TB - Trolleybus						
	VN - Van	0%	0%	0%	0%	0%	0%
EQUIPMENT							
Age - % of vehicles that have met or exceeded their Useful Life Benchmark (ULB)	Non Revenue/Service Automobile	50%	50%	50%	50%	50%	50%
	Steel Wheel Vehicles						
	Trucks and other Rubber Tire Vehicles	50%	50%	50%	50%	50%	50%
FACILITIES							
Condition - % of facilities with a condition rating below Economic Requirements Model (TERM) Scale	Administration	0%	0%	0%	0%	0%	0%
	Maintenance	0%	0%	0%	0%	0%	0%
	Parking Structures	0%	0%	0%	0%	0%	0%
	Passenger Facilities	0%	0%	0%	0%	0%	0%
Achieving these targets depend largely on available funding from the Federal Transit Administration							

PARTA TAM Targets:

PARTA TAM Plan Targets							
Asset Category Performance Measure	Asset Class	2025 Target	2026 Target	2027 Target	2028 Target	2029 Target	2030 Target
REVENUE VEHICLES							
Age - % of revenue vehicles within a particular asset class that have met or exceeded their Useful Life Benchmark (ULB)	AB - Articulated Bus						
	AO - Automobile						
	BR - Over-the-road Bus						
	BU - Bus	0%	0%	0%	0%	0%	0%
	CU - Cutaway Bus	0%	0%	0%	0%	0%	0%
	DB - Double Decked Bus						
	FB - Ferryboat						
	MB - Mini-bus						
	MV - Mini-van						
	RT - Rubber-tire Vintage Trolley						
	SB - School Bus						
	SV - Sport Utility Vehicle						
	TB - Trolleybus						
	VN - Van	0%	0%	0%	0%	0%	0%
EQUIPMENT							
Age - % of vehicles that have met or exceeded their Useful Life Benchmark (ULB)	Non Revenue/Service Automobile	0%	0%	0%	0%	0%	0%
	Steel Wheel Vehicles						
	Trucks and other Rubber Tire Vehicles	10%	10%	0%	0%	0%	0%
	Equipment with Rubber Tires	25%	25%	25%	25%	25%	25%
FACILITIES							
Condition - % of facilities with a condition rating below Economic Requirements Model (TERM) Scale	Administration	0%	0%	0%	0%	0%	0%
	Maintenance	0%	0%	0%	0%	0%	0%
	Parking Structures	0%	0%	0%	0%	0%	0%
	Passenger Facilities	0%	0%	0%	0%	0%	0%
	Storage Facilities	0%	0%	0%	0%	0%	0%
Achieving these targets depend largely on available funding from the Federal Transit Administration							

TAM Investments in the TIP

The TIP was developed and is managed in cooperation with METRO RTA and PARTA. It reflects the investment priorities and project selection process established for *Transportation Outlook 2050*, the area's long-range Regional Transportation Plan. The process is intended to use available funding to improve the condition of the region's transit assets. The process considers factors such as maintaining capital in a state of good repair, air quality improvements, and congestion management on highly traveled roadways.

The anticipated effect of the overall program in the TIP has been evaluated and supports the conclusion that its implementation will contribute toward achieving the TAM performance targets. Investments in transit assets in the TIP include \$97 million for vehicle purchases and \$103 million for facility improvements. A large portion of local funds go towards transit operations, along with providing the local share match for federal capital funding.

The tables below show total transit investments and projects planned for the AMATS area in the FY 2026-2029 TIP period.

Transit Funding Program Estimates: FY 2026 – 2029 TIP				
Funding Program	Fiscal Year			
	2026	2027	2028	2029
5307 – Urbanized Area Formula	\$16,072,000	\$10,979,744	\$9,947,744	\$12,727,744
5310 – Specialized	\$453,104	\$924,605	\$924,605	\$924,605
5339 – Bus and Bus Facilities	\$0	\$777,000	\$777,000	\$0
CMAQ – Congestion Mitigation and Air Quality	\$3,054,750	\$0	\$0	\$0
State – General Revenue Match	\$1,325,000	\$1,325,000	\$1,325,000	\$1,325,000
Local –	\$113,857,463	\$159,638,282	\$91,542,407	\$98,074,407
Total Funding Program Projects	\$134,762,317	\$173,644,631	\$104,516,756	\$113,051,756

Transit Safety Performance

FTA's Public Transportation Agency Safety Plan (PTASP) regulations established transit safety performance management requirements for providers of public transportation systems that receive federal financial assistance for public transportation under 49 U.S.C. Chapter 53.

The PTASP must include performance targets for the performance measures established by FTA in the National Public Transportation Safety Plan. The transit safety performance measures are:

- Total Number of Fatalities
- Fatality Rate: Fatalities per 100,000 Vehicle Revenue Miles (VRM)
- Total Number of Injuries
- Injury Rate: Injuries per 1,000,000 Vehicle Revenue Miles (VRM)
- Safety Events
- Safety Events per 1,000,000 Vehicle Revenue Miles (VRM)
- System Reliability (VRM/failures)

The AMATS planning area is served by two transit service providers: METRO RTA and PARTA. Each RTA is responsible for developing a PTASP and establishing safety performance targets for fixed-route service and paratransit service.

Transit Agency Safety Targets

METRO RTA established the safety targets in the table below in December 2023:

METRO RTA Safety Targets							
Mode of Transit Service	Fatalities (Total)	Fatalities (per 100,000 VRM)	Injuries (Total)	Injuries (per Million VRM)	Safety Events (Total)	Safety Events (per Million VRM)	System Reliability (VRM/Failures)
Fixed Route Bus	0	0	8	0.82	25	9.55	8,949
ADA / Paratransit	0	0	0	0	5	7.79	14,792

PARTA established the safety targets in the tables below in December 2022:

PARTA Safety Targets							
Mode of Transit Service	Fatalities (Total)	Fatalities (per 100,000 VRM)	Injuries (Total)	Injuries (per Million VRM)	Safety Events (Total)	Safety Events (per Million VRM)	System Reliability (VRM/Failures)
Fixed Route Bus	0	0	0	1.31	40	7.34	9,372
ADA / Paratransit	0	0	0	0	20	5.12	2,731

AMATS Transit Safety Targets

AMATS agreed to support the METRO RTA and PARTA safety targets, thus agreeing to plan and program projects in the TIP that, once implemented, are anticipated to make progress toward achieving each RTA's targets.

Chapter 3 | Air Quality Conformity

The United States Environmental Protection Agency (USEPA) monitors and sets National Ambient Air Quality Standards (NAAQS) for several transportation-related pollutants. The USEPA is responsible for determining whether each county in the United States is in attainment or nonattainment for each of those pollutants. Currently in Ohio, the pollutants include nitrogen oxide (NO_x), volatile organic compounds (VOC) and particulate matter 2.5 micrometers or smaller in size (PM_{2.5}). It is possible for a county that was once in nonattainment for a particular pollutant to achieve levels that brought it back into attainment. These are referred to as maintenance areas.

If any county within an MPO region is designated as a nonattainment or maintenance area for one or more of these criteria pollutants, an air quality conformity analysis of the projects programmed in the TIP must be performed.

Nonattainment areas, through a process called transportation conformity, are required to demonstrate that emissions resulting from planned transportation system improvements will not exceed an area's emissions budgets. The U.S. Department of Transportation (USDOT) issues nonattainment areas formal transportation conformity determinations following a quantitative analysis demonstrating that emissions from vehicles traveling on the planned transportation system are less than the area's emissions budget (or other emission target in the absence of an approved budget).

The Metropolitan Planning Organizations (MPOs) and the Ohio Department of Transportation (ODOT) must reestablish conformity for the 2008 and 2015 8-Hour ozone standard and for the 2006 and 2012 fine particulate matter (PM_{2.5}) standards as a result of the adoption of the FY 2026-2029 Transportation Improvement Program (TIP) and the TO2050. Because conformity is determined on a nonattainment area, rather than a subarea basis, each of the area's planning partners must approve a new conformity finding for the area based on these updates. Summit and Portage counties are part of the U.S. Census-designated eight-county Cleveland-Akron-Lorain Combined Statistical Area (CSA). Therefore, the analysis for each standard covers the pertinent portions of the counties of Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage and Summit. The current analyses reflect a comparison of projected transportation emissions against the approved budgets for each standard.

Transportation conformity determinations ensure that the region's transportation projects will have either a neutral impact on, or lead to a reduction in, the region's pollutant levels, contributing to an area's progress toward meeting national ambient air quality standards. [Appendix A](#) includes the entire transportation conformity analysis and all air quality non-exempt projects in the AMATS study area as demonstrated for the AMATS FY 2026-2029 TIP.

Chapter 4 | Demographics

Background

In this chapter we examine the different demographics of the region and compare how much future 2026-2029 TIP project funding each demographic receives and a visual representation of these projects. The demographics are broken down into 6 categories, utilizing 2019-2025 American Community Survey (ACS) 5-year estimates, they include: elderly (individuals 65 and older), carless households, birth rate, marriage rate, minority, individuals with disabilities, and low-income individuals.

Consequently, programs or activities that use federal funds must make a meaningful effort to involve different demographics in the process to make decisions regarding the use of federal funds. It also means that agencies using federal funds must attempt to identify and address any disproportionately high and adverse effects on different groups, which may result from the implementation of their plans and programs.

Meaningful involvement means that people have an opportunity to participate in decisions about activities that may affect their environment or health; the public's contribution can influence the decision-making process; their concerns will be considered in the decision-making process; and the decision-makers seek out and facilitate the involvement of those potentially affected.

Community groups and social service agencies are made aware of opportunities to participate in the planning process by advertising public meetings in three newspapers: 1) The Akron Beacon Journal; 2) The Kent-Ravenna Record Courier; and 3) The Reporter (a publication that serves the black community). Draft planning documents are provided directly to AMATS members and social service agencies, and are made available on the AMATS website, www.amatsplanning.org. In addition, the AMATS website can be viewed in several different languages.

Definitions:

Elderly population: Elderly population is the share of the population aged 65 years and over.

Carless Household: Households without a record of having access to a personal vehicle.

Higher Birth Rates: Census Block Groups with a higher birth rate than the national average.

Higher Marriage Rates: Census Block Group with a higher marriage rate than the national average.

Low-Income: is defined as a person whose median household income is at or below the Department of Health and Human Services (HHS) poverty guidelines (ACS data below 150% of poverty measured). The Federal Highway Administration (FHWA) reiterates this definition with Order 6640.23A (issued in June 2012). The *low-income population* means any readily identifiable group of low-income persons who live in geographic proximity, and, if circumstances warrant, geographically dispersed/transient persons (such as migrant workers or Native Americans) who will be similarly affected by a proposed project, program, policy or activity.

Minority: is defined as a person who is: 1) Black (a person having origins in any of the black racial groups of Africa); 2) Hispanic or Latin (a person of Mexican, Puerto Rican, Cuban, Central or South American, or other Spanish culture or origin, regardless of race); 3) Asian (a person having origins in any of the original peoples of the Far East, Southeast Asia or the Indian subcontinent); 4) American Indian and Alaskan Native (a person having

origins in any of the original people of North America, South America (including Central America), and who maintain cultural identification through tribal affiliation or community recognition; or 5) Native Hawaiian or other Pacific Islander (a person having origins in any of the original peoples of Hawaii, Guam, Samoa, or other Pacific Islands. *Minority population* means any readily identifiable groups of minority persons who live in geographic proximity, and if circumstances warrant, geographically dispersed/transient persons (such as migrant workers or Native Americans) who will be similarly affected by a proposed project, program, policy or activity.

Individuals with Disabilities: Disability data from the American Community Survey (ACS), ask about six disability types: hearing difficulty, vision difficulty, cognitive difficulty, ambulatory difficulty, self-care difficulty, and independent living difficulty. Respondents who report anyone of the six disability types are considered to have a disability.

Adverse effects for this chapter are defined as a singular effect, including only financial expenditures. Previously this section had more numerous definitions of adverse effects. Now, this chapter just examines financial impacts.

Results

Only one analysis was developed to evaluate the potential adverse financial impacts of projects in the FY 2026-2029 TIP based on demographic populations and transportation investments.

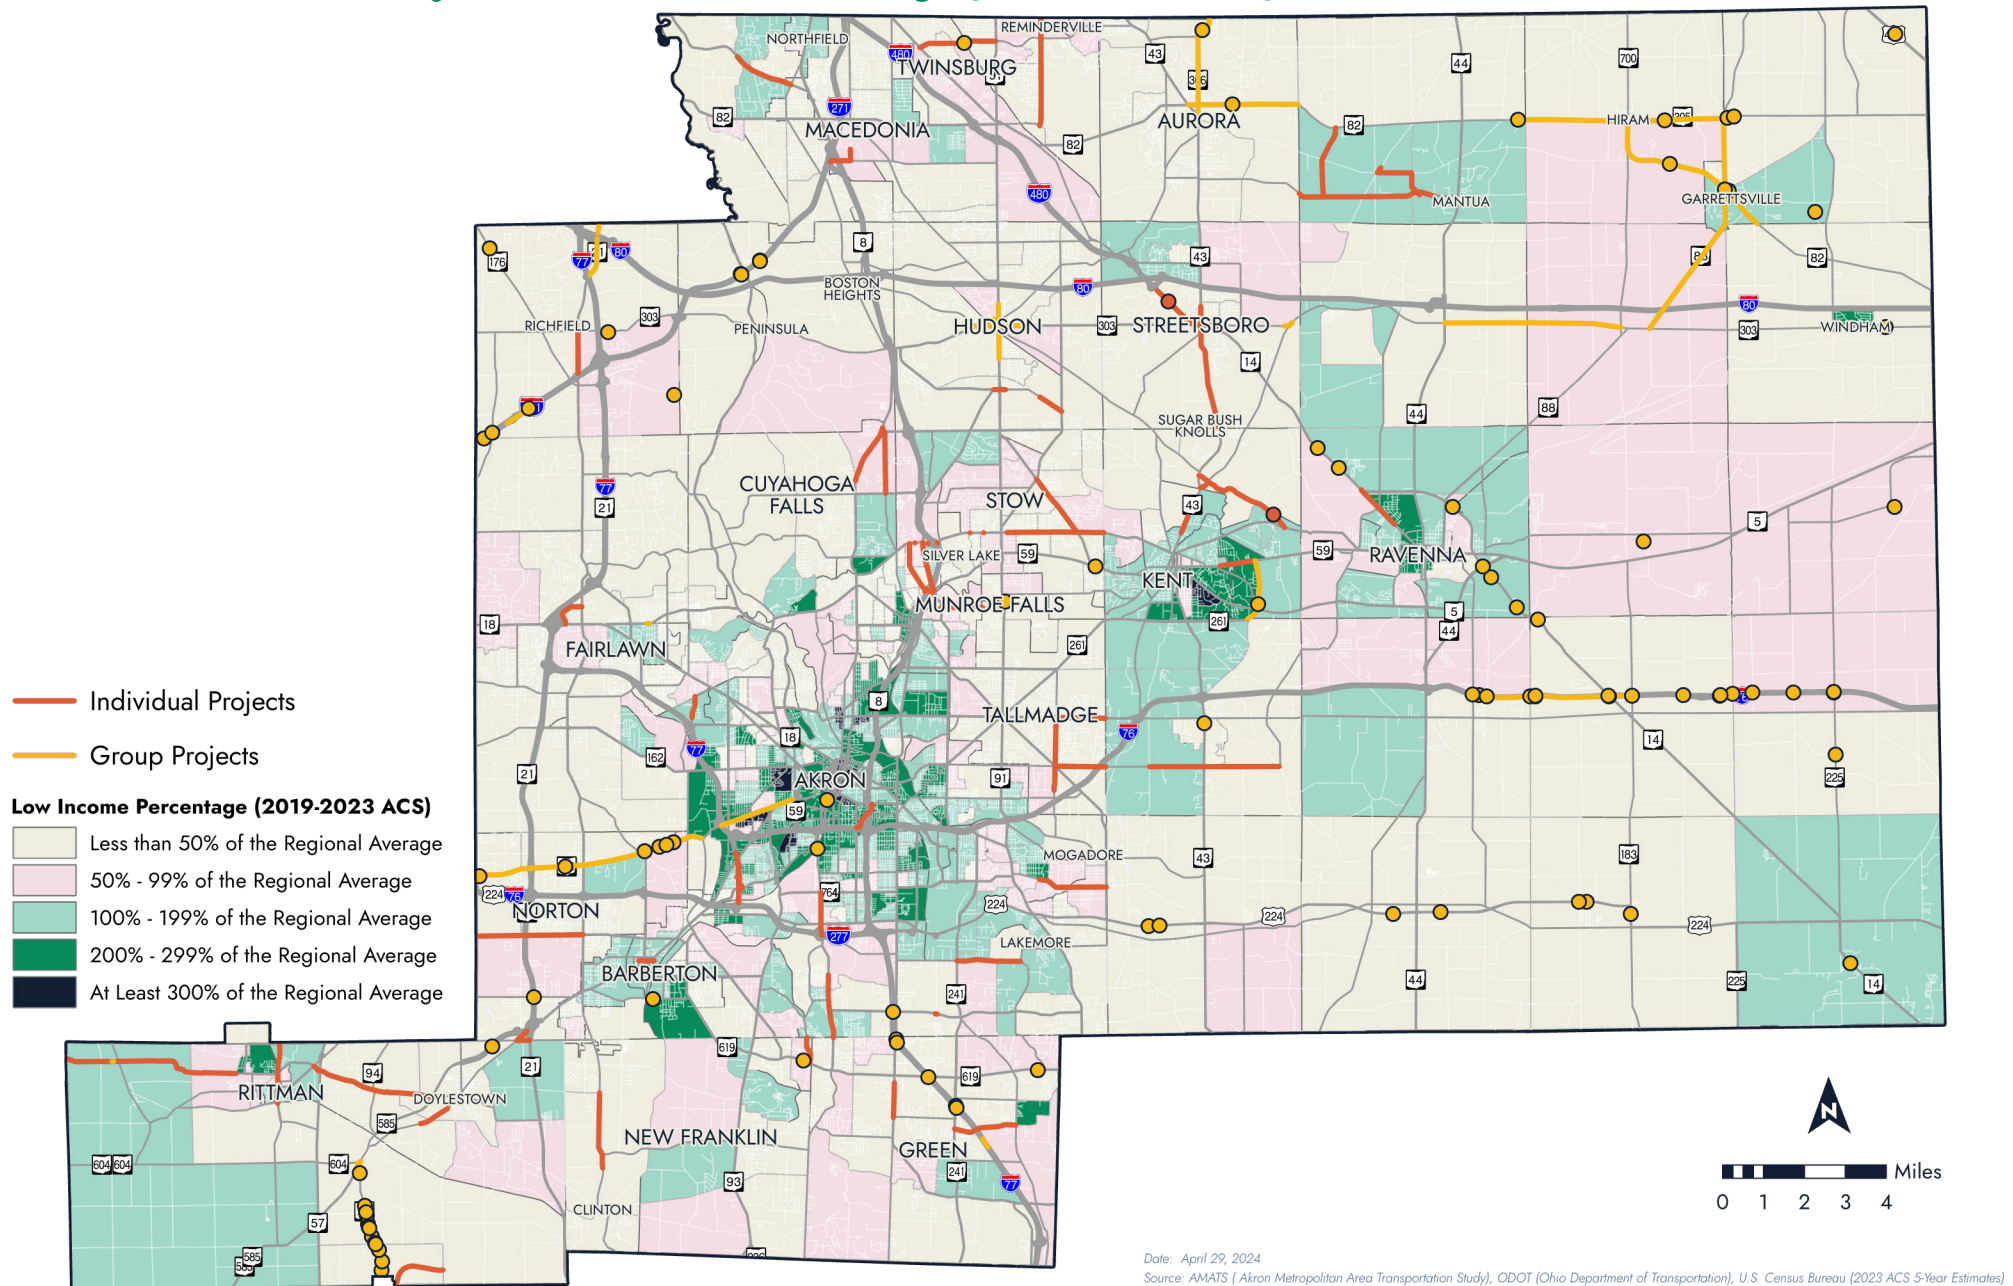

2026-2029 TIP Projects - Minority Percentage (2019-2023 ACS)

Minority Population - Cities and Villages			
Community	Total Population	Minority Population	% Minority Per Community
Akron	189,526	99,203	52.3%
Twinsburg	19,346	6,921	35.8%

2026-2029 TIP Projects - Estimated National Birth Rate (2019-2023 ACS)

2026-2029 TIP Projects - Estimated Regional Marriage Rate (2019-2023 ACS)

TRANSPORTATION IMPROVEMENT PROGRAM | FY2026-2029

Transportation Investments Based on Demographics										
	Highway Expenditures	% of Highway Projects	Debt Service Expenditures	Public Transportation Expenditures	Transportation Enhancement Expenditures	% of Enhancement Projects	Other Miscellaneous Expenditures	Total Expenditures	Population	Land Area (Sq. Miles)
N/A Demographic			\$65,019,689	\$525,975,460			\$56,651,760		721,114	996.9
Elderly	\$339,719,727	82%			\$4,541,008	54%				
Non-Elderly	\$76,999,135	18%			\$3,893,301	46%				
Carless Individual	\$179,866,965	43%			\$6,151,080	73%				
Individuals' w/ Car	\$236,851,897	57%			\$2,283,229	27%				
High Birth Rates	\$158,699,683	38%			\$5,430,779	64%				
Lower Birth Rates	\$258,019,179	62%			\$3,003,530	36%				
High Marriage Rate	\$232,973,758	56%			\$5,220,189	62%				
Low Marriage Rate	\$183,745,104	44%			\$3,111,928	37%				
Low Income	\$249,623,621	60%			\$6,804,422	81%				
Non-Low Income	\$167,095,241	40%			\$1,629,888	19%				
Minority	\$215,261,063	52%			\$4,641,094	55%				
Non-Minority	\$201,457,799	48%			\$3,793,215	45%				
Total	\$416,718,862		\$65,019,689	\$525,975,460	\$8,434,309		\$56,651,760	\$1,068,766,432	721,114	996.9

The above table shows the overall regional funding breakdown compared with each demographic group. Utilizing census block level data from 2019-2023 ACS 5-year estimates, both individual and group projects are overlaid with each demographic. Next, we examine each project to see if it intersects or touches a census block group of the demographics analyzed. If it does, then we add the total and compare against projects that do not touch that demographic. We compare projects that are considered highway or roadway and transportation enhancement (bicycle and pedestrian improvements) expenditures. This process is to analyze whether any demographic groups are underrepresented in transportation spending throughout the region.

National Average Methodology for Birth and Marriage: The variable used for birth rates is able to go down to the census tract level. However, getting data from all census tracts in the nation is too large of a data set to retrieve. Averaging the births from all the states would produce a number that is way too large to compare to the averages at the AMATS census tract level. Therefore, to get some type of estimate of what the national average would be for census tracts. We divided all the states totals by the number of census tracts in the state. This does infer that all of the census tracts produced the same number of children for the state, which is known to not be true, but the estimate would give a better guess at what the national average will be based on census tracts. When it came to finding the national averages for marriage rates the same method applied. However, there were no differences in the map from regional averages to the estimated national averages implying that the AMATS area regional average is a good representation of the national average.

Investment in Low-Income Areas

The overall level of investment in transportation facilities, by geographic area, was examined to determine whether areas with above average concentrations of low-income share of the benefits from planned transportation improvements. The transportation facilities that have been examined in this analysis include all highway and transportation enhancement projects in the FY 2026-2029 TIP. The results of the analysis of transportation investment in low-income areas are shown in the above table. The expenditures examined show no adverse effects toward low-income populations exhibiting, 60% highway/roadway and 81% of transportation enhancements are planned to go through low-income areas.

Investment in Carless Household Population

The overall level of investment in transportation facilities, by geographic area, was examined to determine whether areas with above average concentrations of individuals that live in a carless household population share the benefits from planned transportation improvements. The transportation facilities that have been examined in this analysis include all highway and transportation enhancement projects in the FY 2026-2029 TIP. The results of the analysis of transportation investment in carless areas are shown in the above table. The expenditures examined show no adverse effects on the carless population, exhibiting 43% of highway/roadway and 73% of transportation enhancements are planned for higher carless household areas.

Investment in Minority Individuals

The overall level of investment in transportation facilities, by geographic area, was examined to determine whether areas with above average concentrations of higher minority areas share of the benefits from planned transportation improvements. The transportation facilities that have been examined in this analysis include all highway and transportation enhancement projects in the FY 2026-2029 TIP. The results of the analysis of transportation investment in minority areas are shown in the above table. The expenditures examined show no

adverse effects on the minority population exhibiting 51% of highway/roadway and 55% of transportation enhancements are planned for higher minority areas.

Investment in the Elderly Population

The overall level of investment in transportation facilities, by geographic area, was examined to determine whether areas with above average concentrations of higher elderly population share of the benefits from planned transportation improvements. The transportation facilities that have been examined in this analysis include all highway and transportation enhancement projects in the FY 2026-2029 TIP. The results of the analysis of transportation investment in elderly areas are shown in the above table. The expenditures examined show no adverse effects on the elderly population, exhibiting 82% of highway/roadway and 54% of transportation enhancements are planned for higher elderly populated areas.

Investment in the Higher Birth Rates than National Average Population

The overall level of investment in transportation facilities, by geographic area, was examined to determine whether areas with above average concentrations of higher birth rate population share of the benefits from planned transportation improvements. The transportation facilities that have been examined in this analysis include all highway and transportation enhancement projects in FY 2026-2029TIP. The results of the analysis of transportation investment in high birth rate areas are shown in the above table. The expenditures examined show no adverse effects on the population, exhibiting 38% of highway/roadway and 64% of transportation enhancements are planned for higher birth rate populated areas. *Information on birth and marriage rates are skewed because National data sets need to improve on a census block level for this data to be statistically relevant to the local area.

Investment in the Higher Marriage Rates than National Average Population

The overall level of investment in transportation facilities, by geographic area, was examined to determine whether areas with above average concentrations of higher marriage rate population share of the benefits from planned transportation improvements. The transportation facilities that have been examined in this analysis include all highway and transportation enhancement projects in the FY 2026-2029 TIP. The results of the analysis of transportation investment in high marriage rate areas are shown in the above table. The expenditures examined show no adverse effects on the population, exhibiting 56% of highway/roadway and 62% of transportation enhancements are planned for higher marriage rate populated areas. *Information on birth and marriage rates are skewed because National data sets need to improve on a census block level for this data to be statistically relevant to the local area.

Investment in individuals with a disability population:

The disabled population is more geographically scattered than the other groups analyzed, therefore AMATS did not examine projects that go through higher density of the disabled community as this level of analysis would not be significant. Some of the areas with the highest percentage of disabled population are within the cities of Akron and Barberton, although both have many areas of below-average disabled populations, often in adjoining BGs. Other areas of above-average disabled populations can be found throughout all portions of the planning area.

Transportation Other Miscellaneous Investment Analysis

Totaling 56,651,760, this amount is uncategorized because it does not fit into a specific geographic block group and can be attributed to an entire region or municipality.

Public Transportation Funding

Public transit funding is expected to total \$526,346,804 and at the time of the report has not been divided up based on multiple demographics.

Conclusion

The FY 2026-2029 TIP has been thoroughly analyzed to ensure that the projects will not have disproportionately high and adverse effects on any demographic groups.

Potential Impacts of Projects

None of the projects in the *AMATS Fiscal Year 2026-2029 Transportation Improvement Program* appear to have any disproportionate impact.

Chapter 5 | Title VI and ADA Compliance

Title VI

AMATS acknowledges the importance of ensuring that everyone has the opportunity to be involved in the region's transportation planning process, regardless of their background or abilities. Title VI of the Civil Rights Act of 1964 states that "No person in the United States shall, on the ground of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance." As a recipient of federal funding and as required by Title VI, AMATS has adopted the following non-discrimination policy:

AMATS Nondiscrimination Policy Statement

It is the policy of AMATS to provide an environment of nondiscrimination and equal opportunity in employment as well as in the development of the area's regional transportation policies, plans and programs included in the Regional Transportation Plan (Transportation Outlook 2050) and the Transportation Improvement Program.

Prohibited discrimination may be intentional or unintentional. Seemingly neutral acts that have disparate impacts on individuals of a protected group and lack a substantial legitimate justification are a form of prohibited discrimination. Harassment and retaliation are also prohibited forms of discrimination.

Examples of prohibited types of discrimination based on race, color, national origin, sex, disability, or age include: denial to an individual of any service, financial aid, or other benefit; distinctions in the quality, quantity, or manner in which a benefit is provided; segregation or separate treatment; restriction in the enjoyment of any advantages, privileges, or other benefits provided; discrimination in any activities related to highway and infrastructure or facility built or repaired; and discrimination in employment.

Title VI compliance is a condition of the receipt of federal funds. The Title VI Coordinator is authorized to ensure compliance with this policy, Title VI of the Civil Rights Act of 1964, 42 U.S.C § 2000d and related statutes, and the requirements of 23 Code of Federal Regulation (CFR) pt. 200 and 49 CFR pt. 21.

Annually, AMATS assures that the planning process is carried out in accordance with Title VI of the Civil Rights Act of 1964, as amended (42 U.S.C. 2000d-1) and 49 CFR part 21. For the latest agency self-certification, please see Resolution Number 2024-12 of the AMATS Metropolitan Transportation Policy Committee, approved May 16, 2024.

Any person who believes that he or she has been excluded from participation in or has been denied the benefits or services of any program administered by AMATS, on the basis of race, color, national origin, gender, age, disability or income status may file a complaint of discrimination under Title VI, other non-discrimination statutes, and executive orders. A complaint may be filed directly with AMATS, the Ohio Department of Transportation (ODOT), the Federal Highway Administration (FHWA) or the Federal Transit Administration (FTA). Please contact AMATS Title VI Officer: Jeff Gardner at ph. (330) 375-2436; or jjgardner@akronohio.gov to file a complaint or if you have any questions. You may also refer to the AMATS TITLE VI Civil Rights Program Procedures and Documentation:

[www.amatsplanning.org/sites/default/files/docs/reports/AMATS%20Title%20VI%20Civil%20Rights%20Program%20Final-May%202024.pdf] for additional information and any related forms and procedures.

Throughout the SFY 2026 – 2029 planning process, AMATS engaged in a number of outreach measures to ensure that the various Title VI communities had the opportunity to participate in the transportation planning process. These outreach measures included:

- Launching an entirely new, more user-friendly, AMATS website
- Posting a revised and expanded Title VI notice to the public in English and Spanish on our website
- Posting a revised and expanded Title VI complaint form on our website in English and Spanish
- Adding new local social service agencies to our public participation process
- The continued documentation and retention of public participation activities, such as recording Citizen Involvement Committee (CIC) meetings and correspondence with the public
- Revising our non-discrimination policy statement and posting it on the new website
- Developing a new Public Participation Plan (3P), approved in December 2024
- Continuing to provide annual assurances of Title VI compliance to ODOT with an AMATS Policy Committee resolution
- Continuing to notify recipients of federal funds of the requirement to comply with Title VI, and other non-discrimination regulations, as part of the funding application process
- All AMATS supervisory staff completed extensive on-line and in-person management training with the City of Akron Human Resources Department, including non-discrimination training. Available training opportunities are on-going.
- The AMATS Title VI Coordinator completed several webinars with the FHWA National Highway Institute.
- The AMATS Title VI Coordinator continues to participate in ODOT-led Title VI and DBE-related training courses and webinars.
- The AMATS staff continues to provide annual responses to ODOT’s Title VI compliance questionnaire as part of the Unified Planning Work Program (UPWP) development process.

AMATS embraces diversity and inclusivity and provides an environment of non-discrimination. The SFY 2026 – 2029 TIP planning process was conducted with these important considerations in mind and is compliant with all Title VI regulations and requirements.

ADA

The Americans with Disabilities Act (ADA) prohibits discrimination based on disability and requires all public agencies to provide safe, equal access to their programs, activities and facilities. AMATS values the input of all the region’s residents into the transportation planning process, and took the following measures to ensure that everyone, regardless of their abilities, could access and engage in the SFY 2026 – 2029 TIP planning process:

AMATS outreach efforts include measures and physical accommodations that ensure meaningful access to those protected by ADA requirements. These efforts include:

- AMATS holding its meetings at ADA-compliant facilities or through internet video conferencing
- Meetings are held at ADA-compliant parking and transit accessible facilities
- The agency maintains accommodations for the visually or hearing impaired
- AMATS funding is contingent on recipients assuring ADA compliance
- People with disabilities are represented on the AMATS Citizen Involvement Committee (CIC) and are encouraged to be involved in the transportation planning process, including the development and

improvement of transportation and paratransit plans and services (such as the area's 2023 Coordinated Public Transit - Human Services Transportation Plan)

AMATS carefully considered the needs of all of our region's residents throughout the FY2026-2029 TIP planning process, meeting or exceeding all ADA requirements.

Chapter 6 | Public Involvement

Because the four-year Transportation Improvement Program (TIP) is the primary near-term project implementation document for the Greater Akron area of Portage and Summit counties and northeastern Wayne County, it is the policy of the Akron Metropolitan Area Transportation Study (AMATS) that the region's transportation stakeholders shall have the opportunity to engage in and provide their input throughout the TIP development process.

As required by federal regulation (23 CFR 450.316), the agency adopted the *AMATS Public Participation Plan – 3P* in October 2024 as the agency's official public participation plan. The "3P," which was updated in December 2024, details the agency's public involvement process and outlines various public engagement strategies for all the principal duties of AMATS, including the development of the TIP.

This latest iteration of the TIP spanning Fiscal Years 2026 through 2029 was developed in a manner consistent with the AMATS 3P. The 3P may be accessed at the following link - [Approved 3P-Public Participation Plan-December 12-2024.pdf](#).

The public involvement strategies employed by AMATS in developing the FY 2026-2029 TIP are summarized in the sections below by type.

Appendix B presents material utilized by AMATS to promote the public comment period, citizen comments received by AMATS during the period, and examples of area media coverage regarding the Draft TIP.

Public Comment Period

The Draft FY 2026-2029 TIP was developed and available to the public for a 31-day comment period spanning March 11 through April 11. The agency scheduled this period to coincide with the comment period planned by the Ohio Department of Transportation (ODOT) for its State Transportation Improvement Program (STIP) spanning State Fiscal Years 2026 Through 2029.

During this period, the Draft FY 2026-2029 TIP was available for public viewing and comment at amatsplanning.org, the AMATS **X** and **Facebook** pages - @AMATSPanning, and the AMATS office located at 1 Cascade Plaza, Suite 1300 in downtown Akron. Members of the public were able to submit their insights using online and printed comment forms. No public comments were received on the Draft FY 2026-2029 TIP.

Newspaper Advertisements

AMATS routinely purchases newspaper advertisements to promote the virtual meetings of the AMATS Citizens Involvement Committee (CIC). The agency purchased an ad which was published in the *Akron Beacon Journal* on January 30. This ad invited the public to participate in the virtual February 6 meeting of the CIC during which development of the Draft FY 2026-2029 TIP would be discussed.

AMATS purchased advertisements in two of the Greater Akron area's largest newspapers, the *Akron Beacon Journal* and the *Record-Courier*, and in *The Reporter*, a regional newspaper serving the African-American community. The *Beacon Journal* and *Record-Courier* advertisements were published on March 4, one week before the commencement of the public comment period while *The Reporter* advertisement was purchased for

the week of March 8-14. The advertisements described the importance of the TIP to the area's ongoing regional transportation planning process and encouraged the public to share their insights regarding the draft program.

The advertisements included information regarding how to submit public comments in-person and online. The advertisements also invited members of the public to participate in a March 20 virtual meeting of the CIC during which the Draft TIP would be an agenda item for discussion. Information regarding how to register for the virtual committee meeting was included in the advertisements. Meeting registration information was also provided for those populations requiring special accommodation or assistance.

Press Releases

The agency distributed press releases to print and broadcast media, AMATS committee members, and community group liaisons within the Greater Akron area. These releases announced the availability of the Draft FY 2026-2029 TIP for public review and comment. These releases contained concise information regarding the purpose of the TIP, AMATS' role as the area's federally designated metropolitan planning organization, and how the public may engage the agency during the Draft TIP update process.

Below is a list of the various community groups that AMATS distributed releases to:

- Akron Urban League
- Asian Services in Action, Inc.
- Direction Home Akron Canton
- the International Institute of Akron
- the Ohio Latino Affairs Commission
- Socially Good TV
- Torchbearers
- United Disability Services
- VANTAGE Aging (Senior Community Service Employment Program (SCSEP))

The releases stated that the Draft TIP would be available for public comment from March 11 through April 11 at amatsplanning.org, the AMATS **X** and **Facebook** pages – @AMATSPanning – and the AMATS office located at 1 Cascade Plaza, Suite 1300 in downtown Akron. The releases invited the public to participate in the March 20 virtual meeting of the AMATS CIC and included meeting registration information.

Citizens Involvement Committee

The agency's CIC hosted virtual meetings on February 6 and March 20, which included presentations by the AMATS Staff regarding the purpose of the Draft FY 2026-2029 TIP and the various highway, public transit, and active transportation projects contained within the draft program. The meetings included question-and-answer sessions among CIC members, members of the public, and the AMATS Staff. The minutes of the February 6 and March 20 CIC meetings are included in [Appendix B](#).

Social Media

The agency made extensive use of its web site – amatsplanning.org – and its **X** and **Facebook** pages - @AMATSPanning. Along with posting a page on its web site to accept online and printed comments from the public regarding the Draft FY 2026-2029 TIP, AMATS posted announcements and informative features about the

draft program through the web site's News pages. The AMATS [X](#) and [Facebook](#) pages were routinely updated to inform the public about developments pertaining to the draft program and opportunities to share feedback.

[Appendix B](#) includes screen shots of Draft TIP information presented on the agency's social media pages.

Chapter 7 | Previous TIP Accomplishments

This chapter will highlight the status of projects from the previous version (FY 2024-2027) of the AMATS TIP for both highway and transit projects.

Completed Highway Projects

The following table illustrates the projects sold or obligated during the FY 2024-2027 TIP cycle. The list includes 34 projects with phases that encumbered in FY 2024 & FY 2025. Obligated highway projects included: 14 resurfacing projects; a few capacity adding projects on freeways (I-76 & I-77) and principal arterial (Arlington Rd); and intersection and corridor improvements including signal timing upgrades and turn lanes. Many projects included active transportation upgrades or are standalone multi-use trails or sidewalks projects.

List of Sold/Obligated Highway Projects in FY 2024 & FY 2025					
PID #	CO-ROUTE-SECTION	LOCATION & TERMINI	TYPE OF WORK	PHASE	SOLD OR OBLIGATED FISCAL YEAR
100713	SUM IR 0076 06.72	Akron I-76 (Kenmore Leg) between US 224/I-277 interchange and I-77 interchange (including NW interchange)	Improvements to increase capacity and improve safety including structural rehabilitation and noise walls	PE RW	2024/2025 2025
101439	WAY SR 0021 00.00	Chippewa Township Stark County Line to Summit County Line	Resurfacing, bridge maintenance, drainage / culvert replacement, safety improvements at Clinton Rd, Edwards Rd and Grill Rd	PE CONSTR	2024 2024/2025
102732	SR 59-6.80 resurfacing (curb ramps)	Ravenna 6.80 (W Corp Limit) to 9.05 (E Corp Limit)	Resurfacing with curb ramps	CONST	2024
102744	SUM SR 0018 09.75	Akron Various	Resurfacing with curb ramps	CONST	2024
102745	SUM Darrow Rd (Stow)	Stow South Corp Limit to South of Norton Ave	Reconstruction, curb ramps, sidewalks, storm sewer and signals	RW CONST	2024 2025
102796	SUM Freedom Trail Middlebury Con	Tallmadge/Stow/Kent Portage Bike & Hike to Freedom Trail	Construct multi-use trail	CONST	2024
107930	SUM Freedom Trail Phase 4	Akron Mill St to Rosa Parks Blvd	Construct multi-use trail	CONST	2025
108240	SUM Wooster Road West	Barberton 31st St to Hudson Run Rd to 2nd St NW	Resurfacing and Reconstruction with possible road diet	CONST	2024
110743	SUM SR 0059 07.95	Cuyahoga Falls/Silver Lake/Stow SR 8 to Portage County Line	Resurfacing with curb ramps	CONST	2024
111404	SUM IR 0077 24.12	Bath Township Ghent Rd to Everett Rd	Widen to 6 lanes	CONST	2025
111405	SUM IR 0077 28.75	Richfield Township Everett Rd to Cuyahoga County Line	Widen to 6 lanes	CONST	2024
111429	SUM AMATS FY24 Air Quality	AMATS areawide	Promotion of activities to improve air quality such as biking and walking	OTHER	2024
111433	SUM AMATS FY24 Rideshare Program	AMATS areawide	Promotion of carpooling	OTHER	2024
112735	SUM Hopocan/Norton/Snyder Ave	Barberton Hilldale Ave to 8th St; 17th St NW to Barber Rd; 2nd St SW to 5th St SE	Resurfacing	CONST	2024
112788	SUM Cleve Mass Sidewalk	Bath Township SR 18 to Springside Dr	Sidewalk on west side of roadway	RW CONST	2024 2025
112869	SUM East Ave Ph 1 (Tallmadge)	Tallmadge Community Rd to Portage County Line	Add two way left turn lane, curbs, and sidewalks	RW	2025
113161	SUM CR 111/CR 25 4.33/4.10	Macedonia Highland Rd at Valley View Rd	Intersection Improvements	RW CONST	2024 2025
113165	SUM Ravenna/Shepard/Broadway	Macedonia/Twinsburg Ravenna Rd/Shepard Rd Intersection	Add right turn lanes on Ravenna Rd; add left turn lanes on Shepard Rd; sidewalks; and signal improvements	RW	2024
113175	SUM CR 0012 06.39 (Ravenna Rd)	Twinsburg Township/Hudson Old Mill Rd to Portage County Line	Resurfacing	CONST	2025
114865	SUM IR 77/SR 8 11.65/0.00	Akron I-77 from just north of Lovers Lane to SR 8 SR 8 from I-77 to just north of Perkins St	Corridor improvements on mainline, service roads and ramps	PE	2025
115358	SUM CR 0066 00.00 (Canton Rd)	Springfield Township Pontius Rd to Tisen Rd	Resurfacing	CONST	2024

List of Sold/Obligated Highway Projects in FY 2024 & FY 2025					
PID #	CO-RTS -SECTION	LOCATION & TERMINI	TYPE OF WORK	PHASE	SOLD OR OBLIGATED FISCAL YEAR
115360	POR Chestnut/S Prospect St	Ravenna Main St (SR 59) to SR 14; South Corp Limit to Main St	Resurfacing	CONST	2024
116470	POR TR 0197 00.05 (Frost Rd)	Streetsboro East of SR 43 to Page Rd	Resurfacing	CONST	2024
116479	SUM Highland Rd (Twinsburg)	Twinsburg Hadden Rd to Darrow Rd (SR 91)	Resurfacing	CONST	2024
116539	SUM Miller Rd (Akron)	Akron/Fairlawn Ridgewood Rd to W Market St	Resurfacing	CONST	2024
116742	SUM Wyoga Lake Rd (Cuyahoga F.)	Cuyahoga Falls E Steels Corners Rd to Seasons Rd	Add Two way left turn lane, add right turn lanes where warranted; add new signal at Walsh HS main entrance	RW	2025
116841	WAY Heartland Trail Phase 4A	Chippewa Township North of Market St to Coal Bank Rd	Construct multi-use trail	PE	2024/2025
118654	SUM AMATS FY25 Air Quality	AMATS areawide	Promotion of activities to improve air quality such as biking and walking	OTHER	2025
118657	SUM AMATS FY25 Rideshare Program	AMATS areawide	Promotion of carpooling	OTHER	2025
116917	SUM S Arlington Rd (Green)	Green South of Boettler Rd to north of September Dr	Widening S Arlington Rd from 2 to 4 lanes and includes new roundabouts at Boettler Rd and Southwood Dr and new sidewalks.	RW (CMAQ)	2025
116924	SUM Hudson Signals	Hudson Various locations on SR 91 and SR 303	Replacing/upgrading signals at 14 intersections to adaptive "smart signals"	CONST	2024
116932	SUM Valley View Rd (Hudson)	Hudson Hudson north corp limit to SR 91	Resurfacing	CONST	2024
116990	SUM SR 0059 09.90 (Signals)	Stow Sycamore Dr to Fishcreek Rd	Signal upgrades	CONST	2025
117105	SUM S Main St (Green)	Green South of West Caston Rd to SR 619	Resurfacing	CONST	2024

Carry Forward Projects

The following table summarizes the projects that could be carried forward from the previous 2024-2027 TIP cycle into the current 2026-2029 TIP cycle's project list. These projects are currently scheduled to sell or encumber phase funds in FY 2025; however, they might slip into the FY 2026-2029 TIP due to project delays or high bids. If these projects do move out of FY 2025, they will be added as an amendment to the FY 2026-2029 TIP.

Potential Carry Forward List from FY 2025				
PID #	CO-RTS -SECTION	LOCATION & TERMINI	TYPE OF WORK	PHASE
112026	POR SR 0059 02.14 (E Main St)	Kent Willow St to Horning Rd	Reconstruct to include raised medians, bus pull-offs, new sewers, 2 roundabouts, upgrade lighting and replace sidewalks	CONST
112716	SUM SR 0261 10.90 (N Main St)	Akron Olive St to Riverside Dr	Corridor improvements	CONST
113165	SUM Ravenna/Shepard/Broadway	Macedonia/Twinsburg Ravenna Rd at Shepard Rd Intersection	Add right turn lanes on Ravenna Rd, add left turn lane on Shepard Rd, sidewalks and signal improvements	CONST
115383	SUM CR 0008 09.08 (N Main St)	Akron Over Cuyahoga River	Replace SFN 77336	PE
116464	SUM Rubber City Heritage Tr Ph 2	Akron Huntington Ave to S Arlington St	Construct multi-use trail	CONST
121747	SUM Rubber City Heritage Tr Ph 3	Akron E Exchange St/Huntington Ave intersection to Brown St/ Johnston St intersection	New Multi-modal trail on abandoned railroad	PE
121755	POR Summit/Stow St Ped Imp	Kent Stow/Summit St to Franklin Ave	Replace bridge (SFN 6737498) and connect Portage Hike and Bike Trail	PE

Completed Transit Projects

Summary of FY 2024-2025 Transit Project Activity

The following tables provide status reports for the transit projects that were programmed for the fiscal years 2024 and 2025 of the TIP. Many of these projects were sponsored by METRO RTA and PARTA and utilized funding from the Federal Transit Administration (FTA) Section 5307 Urbanized Area Formula Program for the purchase of replacement buses and the capitalized costs of preventive maintenance.

In addition, METRO and PARTA are supplementing their purchase of replacement buses with funds from the Congestion Mitigation Air Quality Program. Furthermore, ODOT has awarded funds to METRO and PARTA from the state's share of Surface Transportation Block Program funds, administered through the Federal Highway Administration (FHWA). Recent awards to the area's transit agencies have also included funds through the Ohio Transit Partnership Program (OTP2). ODOT may utilize state general revenue funds (GRF) or state-attributable federal funds to finance OTP2 projects. Much of ODOT's support for transit in FY 2024 came through the use of Carbon Reduction Program funds.

Also shown in the tables are the projects that were awarded through the Federal Transit Administration (FTA) Section 5339 Bus and Bus Facilities Program. This program complements the Section 5307 Program and provides additional capital funding to replace, rehabilitate and purchase buses and related equipment, and to construct bus-related facilities. Presently, METRO and PARTA are the only transit operators utilizing Section 5339 funds from the Akron Urbanized Area's apportionment.

In 2024, METRO secured a nearly \$38 million competitively awarded grant through the Federal Transit Administration (FTA) Section 5339c Program. These funds are being used to construct a new administration and maintenance facility on the current METRO property in Akron. In addition, METRO and PARTA programmed \$5.9 million in air quality-related projects.

In 2025, METRO and PARTA are working on multi-year facility rehabilitations, continuing from FY 2024. In addition, the area received \$5.3 million in highway funds flexed over for public transit use. The largest expenditure is METRO's acquisition of 35 large buses, at a cost of \$25.6 million dollars. METRO and PARTA both acquire buses as part of a regular fleet update process in order to maintain their assets in a state of good repair.

Performance Measures - METRO RTA and PARTA have certified that they have developed and adopted the required performance targets for all rolling stock, equipment, facilities, and infrastructure, through a Transit Asset Management (TAM) Plan, as required by federal guidance.

Chapter 8 | Projects

This chapter lists highway and transit projects scheduled to use available local, state and federal funds in fiscal years 2026 through 2029. The highway portion of the Transportation Improvement Program presents those roadway, bridge and transportation alternative projects. The transit portion of the Transportation Improvement Program includes projects programmed for the area's transit operators, earmark projects administered through the Federal Transit Administration, and for projects associated with the coordination of public transit and human service agencies utilizing the Specialized Transportation (Enhanced Mobility for the Elderly and Disabled) Program. All projects included in the FY 2026-2029 Transportation Improvement Program (TIP) are consistent with AMATS' Transportation Outlook 2050.

The AMATS TIP FY 2026-2029 incorporates just under \$1.07 billion in funding throughout the AMATS area. The program includes approximately \$416.7 million for highway projects, \$526.0 million for public transit needs, and \$8.4 million for bike and pedestrian projects. The remaining funds are reserved for debt services totaling \$65.0 million and other miscellaneous expenditures totaling \$56.7 million.

Highway Improvements

Highway projects can be added to the TIP in various ways. Projects can be submitted to AMATS by local governments in the Akron metropolitan area, transit operators, the County Engineers and ODOT. Projects submitted and funded by ODOT and the County Engineers Association of Ohio are reviewed for Regional Transportation Plan consistency before being included in the TIP.

AMATS is responsible for scoring highway projects submitted under the Surface Transportation Program (STBG), Transportation Alternatives Set Aside Program (TASA), the AMATS Resurfacing Program (a subset of the STBG funds AMATS receives), and Carbon Reduction Program (CRP). The AMATS Funding Policy Guidelines, listed in Appendix D, define project eligibility for each funding source and outline the scoring criteria used to select projects. These guidelines are approved by AMATS Policy Committee and are updated ahead of each new funding round based upon the consensus of AMATS members and staff.

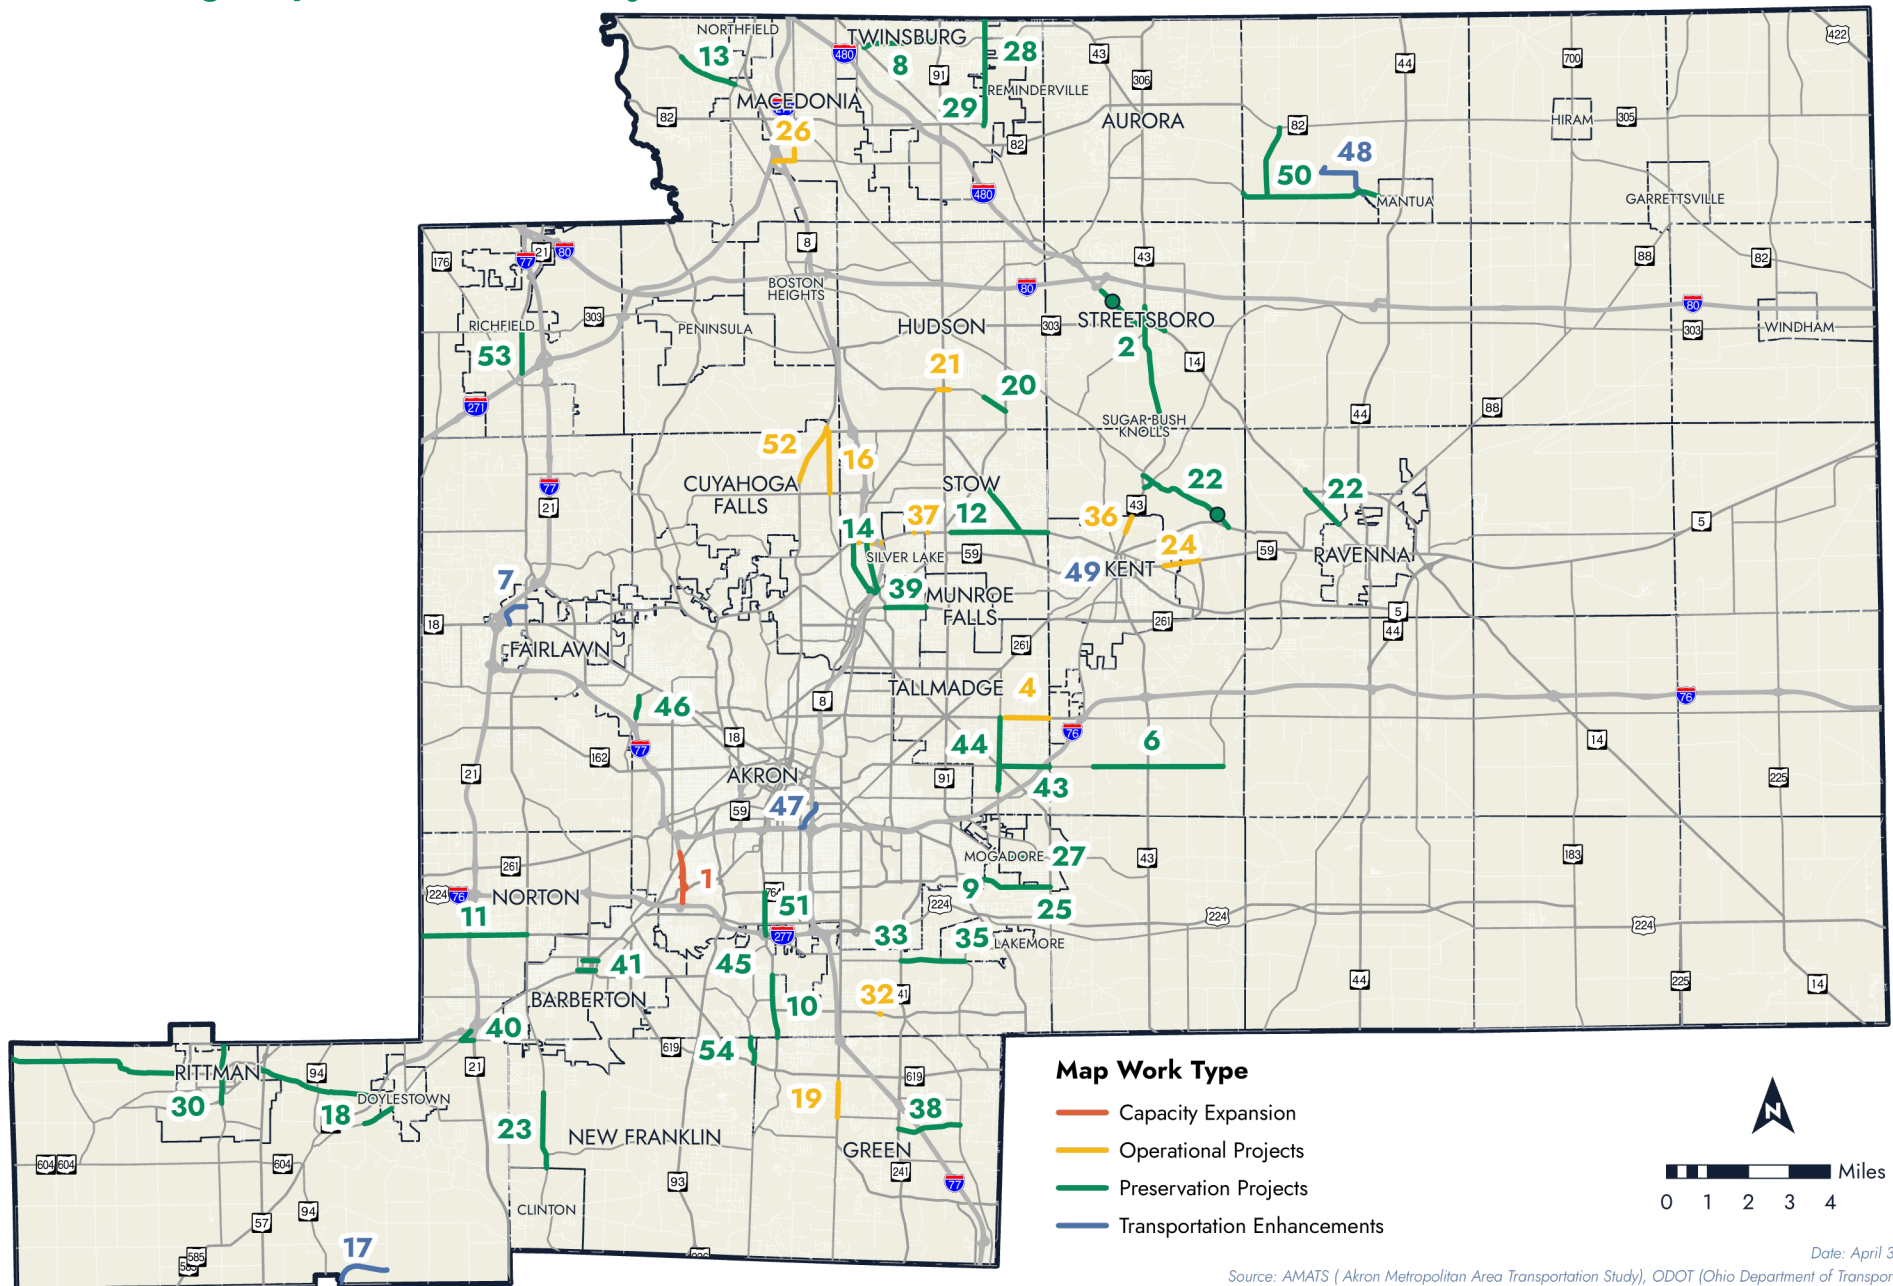

AMATS also accepts applications for Congestion Mitigation/Air Quality (CMAQ) funding. Congestion Mitigation/Air Quality (CMAQ) funding, which is managed by a statewide committee named Ohio's Statewide Urban CMAQ Committee (OSUCC), also has criteria for evaluating and prioritizing projects. These criteria are used by Metropolitan Planning Organizations (MPOs) statewide to select projects in this program.

Once projects are selected for funding through any funding source, projects are added to the TIP. The listing of highway projects is divided into 2 categories: individual and group projects. Individual projects include: any projects with AMATS funding (excluding AMATS Pavement Repair and Sidewalk Ramp Program), projects that require air quality analysis, and any projects that are regionally significant. Group projects include non-regionally significant projects, air quality exempt projects, those that require an environmental document type of CE2 or below, and projects that have a total project cost under \$30 million. Usually, group projects have ODOT as a sponsor and don't require an AMATS amendment when changes occur. Examples of group projects include guardrail repairs, pavement markings, minor bridge/culvert maintenance, sign replacements, lighting, and minor roadway rehabilitation of state and US routes.

All highway projects and studies included in the 2026-2029 Transportation Improvement Program are listed in the tables (individual and group) and are shown graphically in maps on the following pages. Please note some projects, especially group projects, can't be mapped due to the non-location specific nature of the project. The table below includes a glossary of terms to better understand the highway tables.

Term	Description
Map ID	Corresponds with the location on the map
PID No.	The Project Identification Number assigned to a project by ODOT.
Project Name	The official project title assigned by ODOT.
Sponsoring Agency	The unit of government or agency that initiated the project, charged with implementation responsibility and assigned local share.
Work Type	A brief description of the type of work to be performed.
Project Termini	Contains the work limits of the project.
Project Description	A detailed description of the work expected to be completed by the project including locations.
Phase	ENV – Preliminary Engineering/Environmental DBT – Debit Services DD – Detailed Design RW – Right-of-Way CO – Construction OTH – Other SP – Planning
SFY	State Fiscal Year (e.g. SFY 2026 begins on July 1, 2025).
Fund Type	Funding source used for the project.
Fund Estimate	Funding amount for a particular phase/year
Total Project Estimate	Total estimated cost of all project phases in current dollars.
Air Quality Status	Exempt or Non-Exempt (Analyzed). Analyzed projects require amendments automatically when changed.
Performance Measures	Types of performance measures analyzed for a project.

2026-2029 Highway Individual TIP Projects

TRANSPORTATION IMPROVEMENT PROGRAM | FY2026-2029

2026 - 2029 AMATS Highway Individual TIP Project List

Map ID	PID	Project Name	Sponsoring Agency	Work Type	Project Termini	Project Description	Phase	Year (SFY)	Fund Type	Fund Estimate	Total Project Estimate	Air Quality Status	Performance Measures
	76721	SUM SR 0008 07.60	DISTRICT 4-ENGINEERING	Roadway Major Rehab	Summit County SR-8 from Graham Road to just North of SR-303	Total pavement replacement from Graham Road (SLM 7.60) to just North of SR-303 (SLM 13.30), in the cities of Stow and Hudson, Summit County, Ohio. Also includes miscellaneous bridge work, and slide repair. Five unknown abandoned railroads on SR 8- 2 at 12.5, 1 at 10, 1 at 9 and 1 at 8.05	DBT	2026	Garvee / SIB Repayments	\$4,764,214.00	\$67,725,190.19	Exempt	Bridge (NHS), Pavement (Non-Interstate NHS)

								2029		\$2,280,741.00			
1	100713	SUM IR 0076 06.72	DISTRICT 4-PLANNING	Roadway Major Rehab	West Side of SUM Akron Beltway including NW Interchange	Improvements to the west side within the Akron "Beltway" freeway system to increase capacity and improve safety including structure rehabilitation and noisewalls within the City of Akron, Summit County, Ohio.	CO	2027	National Highway Freight	\$52,000,000.00	\$85,802,153.00	Non-Exempt (Analyzed)	Bridge (NHS), Pavement (Interstate), PHED, TTRI (Interstate)
									State	\$13,000,000.00			
									Labor	\$4,550,000.00			
	102329	SUM IR 76/77/8 8.24/09.74/00.00	DISTRICT 4-PLANNING	Roadway Major Rehab	SUM IR76 from 8.24 to 9.96 and 11.01 to 12.03; SUM IR77 from 9.74 to 12.11 and 15.18 to 15.87; SUM SR 8 from 0.00 to 1.75	Pavement replacement over SUM IR76 from 8.24 to 9.96 and 11.01 to 12.03 and SUM IR77 from 9.74 to 12.11 and 15.18 to 15.87. Covers the "South Leg" and "West Leg", includes work to several structures, in the City of Akron, Summit County, Ohio. Resurfacing of SUM SR 8 from 0.00 to 1.75.	DBT	2026	Garvee / SIB Repayments	\$6,058,791.00	\$173,062,028.45	Non-Exempt (Analyzed)	Bridge (NHS), Pavement (Interstate), Pavement (Non-Interstate NHS), Safety
						Also included with this project is the work on PID 101402 as a Design-Bid-Build portion of the Scope of Services: The Akron Beltway Planning Study (PID 95831) identified the need to replace the left handed exit ramps (Ramps N & R) from both WB and EB I-76 in the Central Interchange. Reconstruction of these ramps will address both the poor bridge condition and the substandard ramp geometrics. Reconfiguring the lane arrangements on both WB and EB I-76 to provide drop lanes for NB and SB exits in each direction as well as two thru lane movements for I-76 addresses both safety and operations. The Central Interchange project (PID 101402) is the first identified project from the Akron Beltway Planning Study and has been advanced prior to the finalization of that study due to the condition of the bridges on Ramps N & R. These improvements do not preclude potential future improvements with the Central Interchange.		2027		\$6,058,791.00			
								2028		\$6,058,791.00			
								2029		\$6,058,791.00			
2	105213	POR SR 14/43 1.74/15.59	Streetsboro	Roadway Minor Rehab	POR SR 14 from 1.74 to 3.65, POR SR 43 from 15.59 to 18.20, New signal at POR SR 303 2.72	Resurfacing portions of POR SR 14 and POR SR 43 in the City of Streetsboro, includes minor work to one structure (Part 1). Replace concrete with full depth asphalt pavement at the intersection of POR SR 14/SR 43 (Part 2). Install new signal at SR 14/SR 303/Ranch Rd intersection and close the westbound slip lane from SR 303 to SR 14 (Part 3). Transit Improvements

The transit portion of the AMATS TIP FY 2026-2029 includes projects programmed for the area's transit operators, earmark projects administered through the Federal Transit Administration, and projects associated with the coordination of public transit and human service agencies utilizing the Specialized Transportation (Enhanced Mobility for the Elderly and Disabled) Program. These projects use available federal, state, and local funds to subsidize expenditures for capital items, maintenance, planning, and operations.

As the Metropolitan Planning Organization (MPO) for the area, AMATS is responsible for programming public transportation projects for the two transit providers, Akron METRO RTA and PARTA. METRO and PARTA submit projects to AMATS for programming in the TIP. These projects are drawn from the AMATS Regional Transportation Plan. The submissions from METRO and PARTA are evaluated and prioritized as described in the AMATS Funding Policy Guidelines. Priorities are based on AMATS Regional Goals and Objectives, as well as both of the METRO and PARTA Transit Asset Management (TAM) Plans. The projects are then programmed by year in the TIP based on the evaluations, timing of the projects, and the availability of funding. Most transit projects submitted to AMATS request funding through the FTA Section 5307 Urbanized Area Formula Program. The Akron Urbanized Area receives an annual apportionment from this program. In addition, METRO and PARTA receive, by agreement, a portion of the Cleveland Urbanized Area's Section 5307 funds for the northern part of their service area in each of their respective counties. The bulk of Section 5307 funds that METRO and PARTA utilize are derived from the Akron Urbanized Area's apportionment.

The fiscal constraint analyses for METRO and PARTA contained in this TIP take into consideration the urbanized area allocation of federal funds and the incongruous and variable nature of urbanized areas and consequent MPO boundaries. Further discussions of these issues are contained in the attached AMATS Funding Policy Guidelines. AMATS programs transit projects for providers applying for funds used in the AMATS area.

Federal Transit Grant Programs

Transit Authorities generally use Federal funding programs for capital expenses. Transit agencies can often utilize multiple federal funding sources for one project, administered at the state level by the Ohio Department of Transportation. The primary source of federal funding for capital and maintenance projects is the Federal Transit Authority's **(FTA) Section 5307 Program**. These funds are typically used to purchase new buses, equipment, and for preventative maintenance and planning. To better serve elderly persons and persons with disabilities, the transit agencies are also eligible for **FTA's Section 5310 Enhanced Mobility for the Elderly and Disabled Program** funds. Also known as the Specialized Transportation Program, these funds may be used for capital or operating expenses. **FTA's Section 5339 Bus and Bus Facilities Program** can also fund capital projects. These funds are also used for new buses or for capital facilities. Within the Section 5339 Funding Program is a discretionary source dedicated to funding zero and low-emission buses in order to reduce air pollution. This is known as the Low or No Emissions Grant Program. Funding for implementing or expanding Bus Rapid Transit (BRT) is available through **FTA's Small Starts Program**.

Federal Highway Administration (FHWA) Surface Transportation Block Grant Program (STBG) is the most versatile funding option that can be used for a variety of projects including highways, transit and bicycle and pedestrian facilities. **Congestion Mitigation Air Quality Program (CMAQ)** can be used for projects that improve air quality, such as CNG buses, traffic signal improvements, and park and ride lots. **Carbon Reduction Program (CRP)** can be used for projects designed to reduce transportation emissions, defined as carbon dioxide (CO₂) emissions from

on-road highway sources. Projects eligible for CRP funds include roundabouts, operational projects that improve traffic flow, clean fuel bus purchases, and bicycle and pedestrian projects.

State Grant Programs

The Ohio Transit Partnership Program (OTP2) is a competitive grant program that was established to provide additional capital funding to Ohio's public transit operators for projects emphasizing system preservation. METRO RTA and PARTA have each received OTP2 funds almost every year since 2012. The OTP2 funds have come from ODOT attributable federal funds (CRP, CMAQ or STBG), or from state general revenue funds (GRF). Although the OTP2 program now includes state general revenue funds, the amount of funding is insufficient for the needs of the transit agencies. **The Diesel Emissions Reduction Grant (DERG) Program** is offered by ODOT annually in coordination with the Ohio Environmental Protection Agency (OEPA) to public and private sector diesel fleets (motor vehicle, marine, locomotive, and highway construction equipment). METRO and PARTA have each been awarded DERG funds regularly on an annual basis for a number of years. **The Urban Transit Program (UTP)** is a statewide source of funding catered to transit service in Ohio's urbanized areas with populations of 50,000 or greater (therefore both METRO and PARTA receive funding). UTP is a flexible funding source available for a wide variety of activities that support the provision of public transportation.

The following table presents the SFY 2026 – 2029 Transit funding program project summary for the AMATS area.

Transit Funding Program Estimates: FY 2026-2029 TIP				
Funding Program	Fiscal Year			
	2026	2027	2028	2029
5307 – Urbanized Area Formula	\$16,072,000	\$10,979,744	\$9,947,744	\$12,727,744
5310 – Specialized	\$453,104	\$924,605	\$924,605	\$924,605
5339 – Bus and Bus Facilities	\$0	\$777,000	\$777,000	\$0
CMAQ – Congestion Mitigation and Air Quality	\$3,054,750	\$0	\$0	\$0
State – General Revenue Match	\$1,325,000	\$1,325,000	\$1,325,000	\$1,325,000
Local –	\$113,857,463	\$159,638,282	\$91,542,407	\$98,074,407
Total Funding Program Projects	\$134,762,317	\$173,644,631	\$104,516,756	\$113,051,756

The FY 2026-2029 TIP includes capital, maintenance, planning, and operating expenditures for METRO and PARTA. As discussed above, the primary source of federal funding for capital and maintenance projects is the FTA Section 5307 Urbanized Formula Program. Capital projects may also be funded through the FTA Section 5339 Program. Operating expenditures are funded mainly through the respective county-wide sales taxes and farebox returns.

Also included in the TIP are funds for the Specialized Transportation (FTA Section 5310 Enhanced Mobility for the Elderly and Disabled) Program, administered by ODOT. These funds are awarded on an annual basis as part of the implementation of the area's Coordinated Public Transit / Human Services Transportation Plan to provide transportation services that meet the special needs of elderly persons and persons with disabilities. These funds may be used for capital or operating expenses. The application process and project selection are administered by ODOT.

The following tables list all of the transit projects that are currently programmed for implementation for the FYs 2026 through 2029. The FY TIP 2026-2029 includes \$53.4 million in federal funds for capital and planning

projects, and \$8.5 million in federal funds for preventive maintenance expenditures. No Section 5339 funds are programmed for planning activities. Total transit funding for the FY 2026-2029 TIP is \$526.0 million.

METRO and PARTA both maintain current Transit Asset Management (TAM) plans. Chapter 2 of the AMATS FY 2026-2029 TIP has a discussion of transit performance measures, including a discussion of transit projects which support the targets of the RTA TAM plans.

Federal funding estimates are based on the allocation presented in the March 9, 2024, Federal Register for FFY 2024.

Elderly and Disabled projects are competitively selected annually by the ODOT Office of Transit. The area's RTAs and eligible social service agencies may apply for FTA Enhanced Mobility funds.

TIP Modifications

Once the 2026-2029 Transportation Improvement Program is approved in July 2025, any changes must be made through amendments or administrative modifications. The guidelines for such changes are outlined in [Appendix E | Ohio STIP Revisions Guidelines](#). These guidelines determine whether the change is an amendment that needs to be submitted to ODOT via a resolution approved by the AMATS Policy Committee or an administrative modification that is agreed to by AMATS and ODOT. Administrative modifications are considered smaller changes such as small cost changes and minor name changes. All amendments and administrative modifications are posted as updates on the AMATS website TIP listings.

Chapter 9 | Fiscal Constraint Analysis

For a project to be included in the TIP, per federal regulations, reasonable fiscal constraint must be maintained. Fiscal constraint is achieved by keeping estimated transportation improvements within reasonably anticipated budgets. ODOT Statewide Planning, in coordination with the ODOT STIP Manager, has developed a fiscal constraint assumption that can be utilized to support up to 15% overprogramming of allocated MPO capital funds in the upcoming 2026-2029 S/TIPs. This assumption is not based on increased revenue, rather the increased availability of existing revenues due to projects coming in under the programmed amounts at the time of bid, projects being delayed, and/or projects being cancelled due to shifting local and regional priorities.

For the TIP, fiscal constraint applies to each program year. Fiscal constraint has been a key component of transportation planning and program development since the passage of the Intermodal Surface Transportation Efficiency Act (ISTEA) in 1991, enhancing the credibility and usefulness of the planning process. AMATS current funding is tied to Infrastructure Investment and Jobs Act (IIJA), which was signed into law in November 2021 and expires in September 2026. When the horizon year for the TIP period extends beyond the current authorization period for federal program funds, available or anticipated funds may include an extrapolation based on historic authorizations of federal funds that are distributed by formula.

Based on all these assumptions in coordination with ODOT, AMATS affirms that its FY 2026-2019 TIP meets all fiscal constraint requirements for both highway and transit projects. The tables below provide an overview of the estimated revenues and expenditures for the AMATS region for the FY 2026-2029 TIP period for both highway and transit components by year.

Highway Fiscal Analysis

The 2026-2029 AMATS Highway TIP Fiscal Constraints table is displayed below and is taken from the E-STIP directly. This table lists budgets, estimated expenditures, and cumulative balances within the AMATS area. The cumulative balance includes carry forward, which have positive and negative balances, but never exceeds the 15% overprogramming.

AMATS also provides two additional tables below that includes annual STBG, TASA, and CRP funds, which are AMATS attributable funds and the CMAQ program, which is a statewide program. CMAQ funds received for projects within the AMATS planning area are managed and awarded through a statewide committee. An MPO's TIP may be programmed at higher funding amounts of CMAQ than the MPO's four-year CMAQ allocation and still maintain fiscal constraint due to the overall statewide program maintaining fiscal constraint.

AMATS Attributable Funds					
STBG	2025	2026	2027	2028	2029
Annual STBG Expenditures	\$12,822,077	\$9,502,536	\$12,619,421	\$11,649,933	\$9,964,218

Transit Fiscal Analysis

Federal regulations require agencies such as AMATS to program projects as part of a fiscally constrained process. AMATS and the area's RTAs demonstrate fiscal constraint by including sufficient financial information to confirm that projects can be implemented using committed or available revenue sources. Thus, AMATS ensures that the federally supported transportation system is being adequately operated and maintained.

The requirement for fiscal constraint is met through the preparation of financial plans, the requirements for which are contained in the joint Federal Transit Administration (FTA)/Federal Highway Administration (FHWA) regulations for Statewide and Metropolitan Transportation Planning. For the TIP, fiscal constraint applies to each program year. Available transit formula funding for this TIP is based on the latest year of FTA allocation (FY 2024).

The 2026-2029 AMATS Transit TIP Fiscal Constraints table is displayed below. This table lists budgets, estimated expenditures, and cumulative balances within the AMATS area. Please note that the cumulative balance includes carry forward positive balances.

2026 - 2029 AMATS Transit TIP Fiscal Constraints

Chapter 10 | Approval Resolution

Following the completion of the program update and its commensurate public involvement processes, the Policy Committee of the Akron Metropolitan Area Transportation Study (AMATS) approved the Transportation Improvement Program for Fiscal Year 2026 Through Fiscal Year 2029 for the Greater Akron area by adopting Resolution 2025-XX during its May 15, 2025 meeting.

A copy of the resolution (expected to be signed May 15, 2025) is located below.

AKRON METROPOLITAN AREA TRANSPORTATION STUDY

MEMORANDUM

**TO: Policy Committee
Technical Advisory Committee
Citizens Involvement Committee**

FROM: AMATS Staff

RE: Resolution 2025-05 - Adopting the AMATS Transportation Improvement Program FY 2026-2029

DATE: May 1, 2025

The Transportation Improvement Program Fiscal Years 2026 through 2029 (TIP FY 2026-2029) contains a comprehensive listing of regional transportation improvement projects scheduled for implementation with federal or state funds within the next four years. The *TIP FY 2026-2029* was developed by the AMATS staff in conjunction with all AMATS committees, area transit operators, the Ohio Department of Transportation (ODOT) and US DOT.

The *AMATS TIP FY 2026-2029* incorporates just under \$1.07 billion in funding throughout the AMATS area. The program includes approximately \$416.7 million for highway projects, \$526.0 million for public transit needs, and \$8.4 million for bike and pedestrian projects. The remaining funds are reserved for debt services totaling \$65.0 million and other miscellaneous expenditures totaling \$56.7 million.

The AMATS area includes Summit and Portage counties and the Chippewa and Milton townships in Wayne County. The full TIP document follows ODOT's *Ohio TIP Guidance Template* and contains the following chapters and appendices:

Chapters

1. Introduction
2. Performance Based Planning and Programming
3. Air Quality Conformity
4. Demographics
5. Title VI and ADA Compliance
6. Public Involvement
7. Previous TIP Accomplishments
8. Projects
9. Fiscal Constraint Analysis
10. Approval Resolution

Appendices

- A. Air Quality Conformity
- B. Public Outreach
- C. Self Certification Resolution
- D. Funding Policy Guidelines
- E. Ohio STIP Revision Guidelines

In addition to listing projects to be funded, federal regulations derived from the *Infrastructure Investment and Jobs Act (IIJA)* require that the TIP demonstrate financial balance, air quality conformity, performance measures and include opportunities for public comment. A summary of each of these activities follows:

Financial Balance

The *IIJA* requires that a financial plan be included, demonstrating that the TIP can be implemented with the financial resources expected to be available over the next four years. For this purpose, *Chapter 9 - Fiscal Constraint Analysis* is included in the TIP. This chapter summarizes highway and transit revenues and project costs. Highway and transit cost information were drawn from *Chapter 8 - Projects*.

The fiscal constraint analysis indicates that sufficient federal, state and local funds are expected to be available to support the projects included in the TIP for FY 2026-2029.

Air Quality Conformity

The Air Quality Conformity Analysis forecasts the mobile emissions generated by vehicles using the transportation system recommended in the upcoming *Transportation Outlook 2050*, the area's next Regional Transportation Plan. The analysis is required to forecast emissions relating to ozone and PM_{2.5} pollutants. The results of the analysis demonstrate that the emissions of ozone and PM_{2.5} do not exceed the level of emissions established by the Ohio EPA in the State Implementation Plan (SIP).

All of the projects in the TIP that require air quality analysis were included in *Appendix A - Air Quality Analysis*. This analysis confirms that the TIP FY 2026-2029 is in conformity with the SIP.

Performance Measures

Performance measures are central to implementing a performance-based planning process that guides decision making. Federal regulations require agencies such as AMATS to consider safety, infrastructure condition, congestion reduction, system reliability, freight movement and economic vitality to prioritize the programming of transportation projects. AMATS is also required to consider Transit Asset Management (TAM) planning as part of its efforts to maintain the area’s transit capital resources in a state of good repair. Performance measures are discussed in greater detail in *Chapter 2 – Performance Based Planning and Programming*.

Public Comment

The public was given the opportunity to review and comment on the second draft of the TIP FY 2026-2029 from March 11 through April 11. A virtual public meeting occurred at the Citizens Involvement Committee meeting on March 20, 2025 at 6:30p.m. A press release, written notices, newspaper advertisements and social media were utilized to notify the public of the TIP public involvement period and meeting. Public Involvement is discussed in *Chapter 6 – Public Involvement* and additional information can be found in *Appendix B – Public Outreach*.

Staff Recommendation

Currently, the final draft *AMATS TIP FY 2026-2029* is available on the “Funding” and “Reports & Data” sections of AMATS website located at amatsplanning.org. It is expected that the Federal Highway Administration and Federal Transit Administration will approve this document by the end of June. On July 1, 2025, the new TIP is expected to become official. With federal approval, the Final *AMATS TIP FY 2026-2029* will be available on the same pages of the AMATS website.

The Staff recommends approval of the final draft *AMATS TIP FY 2026-2029*.

RESOLUTION NUMBER 2025-05

OF THE METROPOLITAN TRANSPORTATION POLICY COMMITTEE OF THE AKRON METROPOLITAN AREA TRANSPORTATION STUDY

ADOPTING THE AMATS TRANSPORTATION IMPROVEMENT PROGRAM FY 2026-2029

WHEREAS, the Akron Metropolitan Area Transportation Study (AMATS) is designated as the Metropolitan Planning Organization (MPO) by the Governor, acting through the Ohio Department of Transportation (ODOT) and in cooperation with locally elected officials in Summit and Portage counties and the Chippewa Township and Milton Township areas of Wayne County; and

WHEREAS, AMATS has, pursuant to 23 United States Code 134, and relevant federal regulations, prepared a Transportation Improvement Program for Fiscal Years 2026 through 2029 (TIP FY 2026-2029); and

WHEREAS, AMATS has carried out public involvement activities consistent with the AMATS Public Participation Plan during the period of March 11 through April 11 and conducted a public meeting on March 20, 2025; and

WHEREAS, a fiscal constraint analysis was conducted demonstrating that adequate funding is available to finance the projects programmed in the Transportation Improvement Program; and

WHEREAS, the Clean Air Act Amendments of 1990 require that AMATS make a determination, in cooperation with NOACA, ERPC and ODOT, that Transportation Outlook 2050 is in conformity with respect to Ohio's State Implementation Plan (SIP) for attainment of the 2008 and 2015 8-hour ozone standards and the 2006 and 2012 fine particulate matter standards; and

WHEREAS, a quantitative air quality analysis of the *AMATS TIP FY 2026-2029* and *Transportation Outlook 2050*, the area's regional transportation plan, has been completed in accordance with the requirements specified by *Infrastructure Investment and Jobs Act (IIJA)*; and

WHEREAS, the projects programmed in the *AMATS TIP FY 2026-2029* are consistent with *Transportation Outlook 2050*, the area's regional transportation plan, and were included in the air quality analysis completed for the 2050 Plan and found to be in conformity with the State Implementation Plan; and

WHEREAS, the development of performance measures is required in order to foster transparency and accountability, and help track transportation system improvement at regional, state, and national levels; and

WHEREAS, the Ohio Department of Transportation (ODOT) has established performance targets for safety, infrastructure condition, congestion reduction and system reliability according to federal guidance and timetables; and

WHEREAS, AMATS supports ODOT efforts and targets for these performance measures as further discussed in Chapter 2 - *Performance Based Planning and Programming* in the *AMATS TIP FY 2026-2029*.

RESOLUTION NUMBER 2025-05 (Continued)

NOW THEREFORE BE IT RESOLVED:

1. That this Committee adopts the *AMATS TIP FY 2026-2029* and recommends that its members incorporate these improvements into their transportation improvement programming for their governmental units.
2. That this Committee affirms that the public had adequate opportunity to comment on the *AMATS TIP FY 2026-2029*.
3. That this Committee affirms the consistency of the Transportation Improvement Program with available federal, state and local funding sources.
4. That this Committee approves supporting the Ohio Department of Transportation's statewide targets for all applicable transportation performance measures as described in the attached memorandum and *Chapter 2 – Performance Based Planning and Programming* of the TIP: safety, National Highway System (NHS) pavement conditions, interstate bridge conditions, level of travel time reliability and level of truck time reliability.
5. That this Committee agrees to plan and program projects so that they contribute toward the achievement of ODOT's current targets for each performance measure as described in *Chapter 2 – Performance Based Planning and Programming*, of the *AMATS TIP FY 2026-2029*.
6. That this Committee agrees to plan and program projects in support of air quality goals in coordination with ODOT, NOACA and ERPC.
7. That this Committee agrees to plan and program projects in support of METRO RTA and PARTA Transit Asset Management (TAM) plans.
8. That this Committee affirms the consistency between the *AMATS TIP FY 2026-2029*, the area's regional transportation plan (*Transportation Outlook 2050*) and the State Implementation Plan for air quality.
10. That this Committee authorizes the Staff to provide copies of this Resolution to the appropriate agencies as evidence of action by the Metropolitan Transportation Policy Committee.

Larry D. Jenkins, Jr., P.E., P.S., 2025 Chairman
Metropolitan Transportation Policy Committee

Date

Appendix A | Air Quality Conformity

Introduction

The purpose of this appendix is to document the manner in which transportation conformity is demonstrated for the AMATS Transportation Improvement Program FY 2026-2029.

Summit County and Portage County are part of the U.S. Census-designated eight-county Cleveland-Akron-Lorain Combined Statistical Area (CSA). This area includes the counties of Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, and Summit. Based on air quality readings, the United States Environmental Protection Agency (USEPA) designated this area as serious nonattainment for the 2015 8-hour ozone standard, excluding Ashtabula County. The USEPA designated the entire eight-county area as a maintenance area for the 2008 8-hour ozone standard.

USEPA also designated six counties as a maintenance area under the 2006 annual PM_{2.5} (particulate matter) standard. These areas include Cuyahoga, Lake, Lorain, Medina, Portage, and Summit counties. In addition, the USEPA designated Cuyahoga and Lorain counties as a maintenance area under the 2012 annual PM_{2.5} standard.

Two Metropolitan Planning Organizations (MPOs) serve seven of these counties. The Northeast Ohio Areawide Coordinating Agency (NOACA) serves Cuyahoga, Geauga, Lake, Lorain, and Medina counties. The Akron Metropolitan Area Transportation Study (AMATS) serves Summit and Portage counties. The Erie Regional Planning Commission (ERPC) serves the City of Vermilion in Lorain County. Ashtabula County is not part of a Metropolitan Planning Organization.

New United States Department of Transportation (USDOT) conformity determinations are required every time a new Transportation Improvement Program (TIP) or Regional Transportation Plan is completed or updated. New emissions analyses are required to meet the conformity rule requirement of using the latest planning assumptions. AMATS has updated its travel demand model to conduct this analysis considering the latest planning assumptions.

This conformity analysis reflects the aggregate regional mobile emissions generated by vehicles using the transportation system recommended in the Regional Transportation Plan and TIP. Conformity is demonstrated when the forecasted regional emissions are below the applicable State Implementation Plan (SIP) budgets that have been established by Ohio EPA.

Before analysis began, an interagency consultation call (IAC) took place on November 13, 2024. The Minutes from the IAC are included on page A-7.

Methodology

In order for the Cleveland-Akron-Lorain area to complete the regional emissions analysis, the overall level of pollution (both ozone and PM_{2.5}) resulting from mobile sources must be forecasted.

The ozone-related portion of this air quality analysis must demonstrate that daily volatile organic compounds (VOC) and nitrogen oxides (NO_x) emissions from mobile sources will not exceed those established in the budget contained in the SIP for ozone, which sets the allowable limits for each pollutant in the Cleveland-Akron-Lorain

area. The budgets for the 2015 8-hour ozone standard are from the 2008 SIP and were set on January 6, 2017. The budgets for the 2008 8-hour ozone standard are based on the 1997 SIP and were set on March 19, 2013. The ozone analyses are shown in Tables 1 and 2.

Similarly, the PM_{2.5}-related portion of the air quality analysis has to demonstrate that annual direct PM_{2.5} and nitrogen oxides (NO_x) emissions from mobile sources will not exceed those found in the budget established by Ohio Environmental Protection Agency (OEPA). The budgets for the 2006 PM_{2.5} standard were set on July 26, 2013. The budgets for the 2012 PM_{2.5} standard are based on the 2012 SIP and were set on December 26, 2018. The PM_{2.5} analyses are shown in Tables 3 and 4.

The AMATS and ODOT are jointly responsible for travel demand modeling and air quality analysis for the Akron area. In December 2024, forecasted variables were approved as inputs to the model. The air quality analyses documented in this appendix involve the use of the travel demand and emissions models to analyze future regional mobile source emissions. Trip tables have been created using the latest planning assumptions and are based on the most recent forecasts of land use and socioeconomic data produced by AMATS.

NOACA and ODOT are jointly responsible for travel demand modeling and air quality analysis for its area. Emissions for Ashtabula County are generated using current ODOT traffic volume data and growth rates.

In order to determine mobile source impacts on regional ozone and PM_{2.5} levels, all non-exempt TIP projects follow the code of Federal Regulations (CFR) 40 CFR Part 93, as related to the EPA's air programs. These projects have been coded into the travel demand model for ozone analysis years of 2027, 2030, 2040, and 2050; and for PM_{2.5} analysis years of 2022, 2027, 2030, 2040, and 2050. The projects coded in each network are listed in Exhibits A-1 through A-4. Once the AMATS travel demand model was run for each of the analysis years described above, the traffic assignment results were post-processed and input into MOVES4. The output from MOVES4 includes VOC and NO_x for ozone; and direct PM_{2.5} and NO_x for PM_{2.5}.

The AMATS area results have been combined with the NOACA and Ashtabula County results to complete the conformity analysis for the entire Cleveland-Akron-Lorain ozone and PM_{2.5} nonattainment area. The conformity analysis results for the entire region are available for public comment at the March 11, 2025, Transportation Improvement Program public meeting.

Results

The analysis for the ozone standards must show that VOC and NO_x emissions from mobile sources will not exceed those established in the budget contained in the SIP, which sets the allowable limits for each pollutant. Table 1 shows the results of the MOVES4 analysis for the 2015 8-hour ozone standard for the Cleveland-Akron-Lorain serious non-attainment area.

The data in Table 1 confirms ozone precursor emissions do not exceed the budgets for either VOC or NOx.

Table 1 2015 8-Hour Ozone Test Cleveland-Akron-Lorain Mobile Source Ozone Precursor Emissions Forecasts					
Volatile Organic Compounds (VOC) (tons/day)					
	2027 Emissions	2030 8-Hour Budget	2030 Emissions	2040 Emissions	2050 Emissions

	2027 Emissions	2030 8-Hour Budget	2030 Emissions	2040 Emissions	2050 Emissions
NOACA	14.55		11.12	4.57	3.76
AMATS	5.49		5.47	4.52	4.5
TOTALS	20.03	43.82	16.59	9.08	8.31

Attainment status: 2015 8-Hour Ozone standard – serious nonattainment area (Federal Register / Vol. 89, No. 242 / Tuesday, December 17, 2024)

SIP Status: Federal Register /Vol. 82, No. 4 /Friday, January 6, 2017 – direct final rule adequacy finding for Motor Vehicle Emission Simulator (MOVES) based 2008 ozone standard Motor Vehicle Emission Budget (MVEB). No submittals required under 2008 8-Hour ozone standard until approved budgets are received. The budgets found adequate for 2008 standard will satisfy the 2015 tests, per U.S. EPA.

8-Hour Geography: Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, Summit Counties, OH

Conformity Tests: 2008 Standard 8-Hour budget tests

Analysis Years: 2027 Attainment and 1st Analysis year; 2030 Interim and SIP Budget year; 2040 Interim year; 2050 Plan horizon year

Table 2 shows the results of the MOVES4 analysis for the 2008 8-hour ozone standard for the Cleveland-Akron-Lorain maintenance area. This analysis must show that VOC and NOx emissions from mobile sources will not exceed those established in the budget contained in the SIP, which sets the allowable limits for each pollutant. Table 2 confirms ozone precursor emissions do not exceed the budgets for either VOC or NOx.

Table 2 Cleveland-Akron-Lorain Mobile Source Ozone Precursor Emissions Forecasts 2008 8-Hour Ozone Test					
Volatile Organic Compounds (VOC) (tons/day)					
	2027 Emissions	2030 8-Hour Budget	2030 Emissions	2040 Emissions	2050 Emissions

SFY2026-2029 Transportation Improvement Program (TIP)**Air Quality Conformity Interagency Consultation Conference Call Minutes****November 13, 2024, 3:00 p.m., Teams Virtual Meeting****SFY2026-2029 Transportation Improvement Program (TIP)****Air Quality Conformity Interagency Consultation Conference Call Minutes**

Present: Erie County Regional Planning Commission (ERPC)
Akron Metropolitan Areawide Transportation Study (AMATS)
Northeast Ohio Areawide Coordinating Agency (NOACA)
Ohio Department of Transportation, Statewide Planning (ODOT)
Ohio Environmental Protection Agency (Ohio EPA)

Logistics: November 13, 2024, 3:00 p.m., Teams Virtual Meeting

I. Purpose

A formal interagency consultation (IAC) process is required in each nonattainment and maintenance area to address technical and procedural issues related to air quality planning. The Cleveland, Akron, and Erie County, Ohio metropolitan planning organizations (MPOs) (NOACA, AMATS and ERPC) are updating their SFY2026-2029 TIPs. The TIPs are part of the MPOs' existing long-range transportation plans (LRTPs).

II. Discussion

- The IAC call began at 3:00 p.m.
- AQ status reviewed for Northeast Ohio review of PM_{2.5} and Ozone
- Parties discussed the current and future attainment status of Northeast Ohio, but it did not need to be reflected in the upcoming conformity analysis
- OEPA expected the bump up to serious nonattainment for ozone this week
- AMATS asked if this needed to be reflected with the conformity analysis for the TIP
- OEPA stated that the status will change from moderate nonattainment to serious nonattainment for ozone
- NOACA stated that the standard for fine particulate matter will not be reflected on the agenda
- OEPA didn't anticipate an official designation until 2026
- All parties agreed on the geographic scope of the analyses, which includes the five NOACA counties (Cuyahoga, Geauga, Lake, Lorain, and Medina), the two AMATS counties (Portage and Summit) and Ashtabula County
- ODOT recommended removing Geauga County and Ashtabula Township from the 2006 PM_{2.5}
- Parties discussed applicable TIP budgets
- No parties objected to keeping current TIP budgets

- NOACA stated that since the statuses had not changed, the same TIP budget might apply
- Parties discussed analysis years – CY 2024, 2030, 2040, 2045 (AMATS and ERPC), 2050
- Parties discussed whether to retain or remove the 2045 budget
- AMATS did not believe they need to keep analysis year 2045, but that it might be a question for the EPA. AMATS' next plan will be 2050, therefore, unless the budget year includes 2045, it is not needed as an analysis year
- NOACA stated that the future years usually matched with the LRTP
- AMATS stated for the LRTP year we have to have intermediate years no more than 10 years for the air quality calculations for the analysis, but for the budget years they are not sure how they are calculated
- ODOT cited 40 CFR 93.106 for reference
- NOACA will follow up with EPA to determine if 2045 is needed
- AMATS stated that in the last TIP, the budget year for ozone was 2030. For PM2.5 it was 2022
- All parties agreed to concur later regarding the budget years
- Parties agreed to use MOVES 4.0
- Parties confirmed the geographic division for the analysis
- NOACA will complete the conformity analysis for Cuyahoga, Geauga, Lake, Lorain, and Medina Counties
- ODOT and AMATS will work together to run the analysis for Portage and Summit Counties
- ODOT will also do the additional analysis for Ashtabula County
- Parties agreed on county representation for conformity analysis
- NOACA will use Lorain County as its model
- ODOT will use Summit County as its model for AMATS
- NOACA will work with ODOT to complete post processing
- NOACA will complete the conformity documentation after post processing
- NOACA stated that the first draft of TIP will be uploaded for USDOT review January 31. Draft STIP and TIP will include all components for review
- All parties agree on dates for conformity analyses that will be provided for consideration by their Technical Advisory and Policy Committees for approval. NOACA will distribute the conformity analyses
- AMATS by January 16, 2025 for their February 6 Technical Advisory Committee and February 13 Policy Committee
- EPRC by January 16, 2025 for their January 23 Policy Committee
- NOACA agreed to complete the conformity documentation and submit it for approval
- ODOT needs final Board resolutions
- The Public Involvement Period takes place March 11-April 11. NOACA explains that the draft TIP will be completed, but Board approval will not take place until March 14th, 2025
- ODOT agreed to speak to NOACA about their options moving forward outside this meeting
- ODOT agreed to assist NOACA with post processing
- ODOT asked for clarification regarding questions concerning TIP budgets
- OEPA will investigate appropriate TIP budgets
- ODOT stated that Columbus, Cincinnati, and Dayton will also inquire about TIP budgets
- OEPA did not anticipate Columbus and Dayton going into nonattainment for PM2.5

- OEPA stated that Canton will be recommended not to be designated as nonattainment under the new standard. An exceptional events demonstration will be submitted for the wildfire smoke influence days of 2023
- NOACA clarified that this will be sent out to partners who were unable to attend the meeting
- NOACA and OEPA agrees to look into budget years
- The IAC call concluded at 3:41pm

Addendum

After the November 13th IAC call, AMATS and NOACA coordinated with the planning partners to get concurrence on the following outstanding issues:

The appropriate analysis and budget years for ozone and PM_{2.5}; and whether to include 2027 (serious area attainment year for ozone) in this year's TIP and remove 2024.

The planning partners concur that the budget and analysis years as input to the SFY 2026-2029 TIP are as follows:

Ozone	2027 Emissions	2030 8-Hour Budget	2030 Emissions	2040 Emissions	2050 Emissions
PM _{2.5}	2027 Emissions	2030 8-Hour Budget	2030 Emissions	2040 Emissions	2050 Emissions

The budget and analysis years apply to all the ozone and PM_{2.5} standards. These include the following:

OZONE 2015 8-hour ozone standard (serious nonattainment area)

2008 8-hour ozone standard (maintenance area)

PM_{2.5} 2006 Annual Standard (maintenance area)

2012 Annual Standard (maintenance area) - this only includes the areas of Cuyahoga and Lorain Counties, OH

Appendix B | Public Outreach

This ad appeared in the Akron Beacon Journal on 1/30/2025.

Join us virtually Feb. 6

You are invited to join us virtually in a meeting of the Citizens Involvement Committee (CIC) of the Akron Metropolitan Area Transportation Study (AMATS).

The CIC will present a preliminary look at the Greater Akron area's four-year *Transportation Improvement Program (TIP)* and the long-range regional transportation plan, *Transportation Outlook 2050 (TO2050)*.

The *TIP* is the four-year program of highway, public transit, and active transportation projects scheduled to receive federal funds from Fiscal Year 2026 through Fiscal Year 2029. *TO2050* identifies transportation needs and presents recommendations for projects to meet identified needs over the next 25 years.

The CIC will meet at **6:30 p.m., Thursday, Feb. 6**. Please go to **amatsplanning.org/cic-meeting-registration** to join this meeting or call **330-375-2436**. Meeting materials will be available at **amatsplanning.org**.

AMATS is committed to ensuring that individuals with disabilities are able to participate fully in public programs, services, and activities. Anyone who needs an accommodation from AMATS is invited to contact AMATS Public Information Coordinator Kerry Prater at 1 Cascade Plaza, Suite 1300, Akron, OH 44308, (voice) (330) 375-2436 as soon as possible. If you require TDD phone service call Ohio Relay at 800-750-0750 and they will assist in contacting AMATS at (330) 375-2436.

AK-41059458

**Akron Metropolitan Area Transportation Study
Citizens Involvement Committee
Thursday, February 6, 2025 – 6:30 p.m.**

Meeting Summary

Attendees:

Rick Bohan
Ron Brubaker, TASCforce, Inc.
Austen Rau
Bill Sepe

Staff:

Curtis Baker, AMATS Planning Director
Seth Bush, Geographic Information Systems (GIS) Coordinator
Jeff Gardner, Transportation Planner
Amelia Hoffmeier, GIS Planner
Matt Mullen, Transportation Planner
Matt Stewart, Planning Administrator

I. Welcome

Matt Stewart welcomed the AMATS Citizens Involvement Committee (CIC) meeting attendees.

II. Discussion Items

- A. Mr. Stewart** presented Attachment 5B – Draft FY 2026-2029 Transportation Improvement Program – Project List.

Austen Rau stated that he was pleased that the two Veterans Trail projects were still programmed in Fiscal Year 2027 of the current Transportation Improvement Program (TIP). **Mr. Rau** asked whether AMATS had learned of any new developments to move those projects to an earlier date in the Draft TIP. **Curtis Baker** said that the projects are rescheduled to a later date for fiscal constraint purposes in the draft program, but the Stow portion of the trail would be returned to the program if the project's contract is sold. **Mr. Baker** said that AMATS has not heard of any new developments regarding the Veterans Trail project. **Mr. Baker** noted that the federal funding situation is in a state of transition and should be clearer when the new transportation secretary issues guidance.

Mr. Rau asked if AMATS was seeking a \$1.5 million loan on Transportation Alternative Set-Aside (TASA) Program grants. **Mr. Baker** said yes and noted that the agency was notified by the Ohio

Department of Transportation (ODOT) that the Rubber City Heritage Trail Corridor would miss its fourth quarter funding benchmarks. **Mr. Baker** said that AMATS plans to discuss the issue with ODOT and Akron officials soon.

Mr. Brubaker asked for a clarification regarding the scheduling of the trail projects. **Mr. Baker** explained that AMATS must demonstrate that the TIP is in fiscal constraint and may only “over-program” the TIP by 15 percent above available funding. **Mr. Baker** noted that, as additional funding becomes available, the TIP may be amended to include select over-programmed projects.

Mr. Brubaker said that the Boston Heights Village Council cancelled funding for the Heights-to-Hudson Trail in December. **Mr. Brubaker** asked whether AMATS funding was programmed for this project. **Mr. Baker** said that AMATS, while supportive of the project, did not program funding for the project. **Mr. Brubaker** asked whether the \$500,000 Clean Ohio grant and \$250,000 in additional state funding that were committed to the project could be made available to AMATS for other purposes. **Mr. Baker** said that the grant would be returned to the Clean Ohio Program and that the state funding would likely remain unused before being released by the state.

B. Mr. Stewart introduced AMATS GIS Planner Amelia Hoffmeier as a new member of the agency staff.

C. Mr. Stewart presented Attachment 5C – Draft *Transportation Outlook 2050*.

Mr. Rau said that he was pleased to see the Veterans Trail/Akron Secondary included on the TO2050 list of Bike & Pedestrian Recommendations. **Mr. Rau** said that he would like the trail’s southern terminus link to the Northside Station rather than end at the Freedom Trail. The attendees discussed the Veterans Trail and its potential linkage to the Northside Station. **Mr. Brubaker** described a proposed linkage supported by TASCforce, Inc. **Mr. Stewart** said that he would forward the attendees’ and the TASCforce, Inc.’s stated support for a link to city of Akron officials.

D. Mr. Baker presented Attachment 6B – Resolution 2025-02 – Supporting the Region’s Efforts to Develop Intercity Passenger Rail Service to the Greater Akron Area.

The attendees discussed the potential of intercity passenger rail service in the Greater Akron area and the three rail corridors – the Cleveland-Columbus-Dayton-Cincinnati (3C&D) Corridor, Cleveland-Toledo-Detroit Corridor, and Chicago, Fort Wayne, Columbus, and Pittsburgh – currently being studied.

Rick Bohan asked whether it was the Ohio Department of Transportation (ODOT) that indicated that it would be difficult to add Akron to the Cleveland-Columbus-Dayton-Cincinnati (3C&D) Corridor for a potential rail study. **Mr. Baker** said that former ODOT Director Jack Marchbanks stated so in a letter. **Mr. Baker** described the various proposed rail line corridors and connections. **Mr. Baker** said that there are concerns regarding Akron-Cleveland intercity ridership levels. **Mr. Baker** noted that intercity rail service would require a significant local, state and

federal investment. **Mr. Baker** said that the level of state investment required would not be known until the various rail study corridors are complete.

Mr. Bohan asked about the proposal for a station at the Akron-Canton Airport. **Mr. Baker** said that Ohio Rail Development Commission (ORDC) officials indicated that an airport station is ineligible as it is not considered a viable terminus or a connection for intercity passenger rail service.

E. Mr. Stewart presented a Transportation Funding Update.

Mr. Stewart said that AMATS is sorting through the various executive orders issued by the Trump administration and their potential implications on project funding. AMATS has been corresponding with the Federal Highway Administration (FHWA) and ODOT for guidance. The agency does not anticipate any changes to AMATS' currently funded programs and is moving ahead to sell FY 2025 projects. The agency does anticipate changes in the agency's planning process, with a de-emphasis on environmental justice and environmental-related issues. Transportation Secretary Duffy published a memorandum identifying several emphasis areas.

Mr. Baker said that AMATS does not anticipate any funding issues stemming from policy changes under Trump administration executive orders as the agency's funds are largely from suballocated sources. However, communities that have received discretionary funds from programs like Rebuilding American Infrastructure with Sustainability and Equity (RAISE), Safe Streets for All, or Reconnecting Communities program funds might experience changes.

Mr. Bohan asked for a clarification as to how community birth rates may be a consideration in the federal project funding allocations to the Greater Akron area. **Mr. Baker** referred to a USDOT order issued by Transportation Secretary Duffy. The order updates and resets the principles and standards underpinning USDOT policies, programs, and activities to mandate reliance on rigorous economic analysis and positive cost-benefit calculations and ensures that all DOT grants, loans, contracts, and DOT-supported or -assisted state contracts bolster the American economy and benefit the American people. The attendees discussed the implications of this order on area project funding.

Mr. Rau asked if the agency was scheduled to update the *AMATS Funding Policy Guidelines* this year. **Mr. Baker** said yes. **Mr. Rau** asked how changes in federal guidance may affect the guidelines update. **Mr. Baker** said that the agency will likely receive the guidance prior to the agency's update process, which will provide clarity at that time.

III. Adjournment

There being no other business, the meeting was adjourned.

The next meeting of the CIC is scheduled for **6:30 p.m.** on **Thursday, March 20, 2025.**

Soon, the Akron Metropolitan Area Transportation Study (AMATS) will present the area's four-year Draft Transportation Improvement Program (TIP) and long-range Draft Transportation Outlook 2050 for public review and comment.

The TIP is the four-year program of highway, public transit, and active transportation projects within the Greater Akron area scheduled to receive federal funds from Fiscal Year 2026 through Fiscal Year 2029. Transportation Outlook 2050 (TO2050) is the area's long-range plan that identifies regional transportation needs and presents recommendations for projects to meet identified needs over the next 25 years.

The TIP and TO2050 are key elements of the regional transportation planning process within Portage and Summit counties and northeastern Wayne County.

AMATS will soon present these two items to the public for their insights. Additional details will be available on the agency website - amatsplanning.org - in the coming days.

This ad appeared in both the Akron Beacon Journal and Record Courier on 3-4-25

AMATS presents two views of the area's transportation future

If you're interested in what the future holds for transportation in the Greater Akron area, then highlight **March 11** through **April 11** on your calendar. That's when the Akron Metropolitan Area Transportation Study (AMATS) will present the area's four-year Draft *Transportation Improvement Program* (TIP) and long-range Draft *Transportation Outlook 2050* for public review and comment.

The TIP is the four-year program of highway, public transit, and active transportation projects within the Greater Akron area scheduled to receive federal funds from Fiscal Year 2026 through Fiscal Year 2029. *Transportation Outlook 2050 (TO2050)* is the area's long-range plan that identifies regional transportation needs and presents recommendations for projects to meet identified needs over the next 25 years. The TIP and TO2050 are key elements of the regional transportation planning process within Portage and Summit counties and northeastern Wayne County.

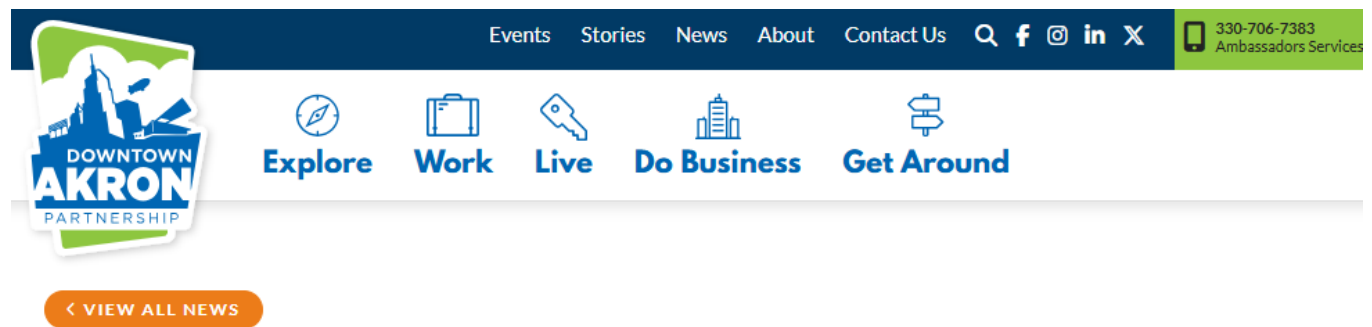

The Draft TIP and Draft TO2050 will be available for public comment from **March 11** through **April 11** at amatsplanning.org, the AMATS X and Facebook pages - [@AMATSPPlanning](https://www.facebook.com/AMATSPPlanning), and the AMATS office in downtown Akron. The **March 20** virtual meeting of the **AMATS Citizens Involvement Committee** will present these draft items at **6:30 p.m.** To join this meeting, please visit amatsplanning.org/cic-meeting-registration or call **330-375-2436** for more information.

AMATS is committed to ensuring that individuals with disabilities are able to participate fully in public programs, services, and activities. AMATS presents two views of the future

If you're interested in what the future holds for transportation in the Greater Akron area, then highlight **March 11** through **April 11** on your calendar. That's when the Akron Metropolitan Area Transportation Study (AMATS) will present the area's four-year Draft *Transportation Improvement Program* (TIP) and long-range Draft *Transportation Outlook 2050* for public review and comment.

The TIP is the four-year program of highway, public transit, and active transportation projects within the Greater Akron area scheduled to receive federal funds from Fiscal Year 2026 through Fiscal Year 2029. *Transportation Outlook 2050* (TO2050) is the area's long-range plan that identifies regional transportation needs and presents recommendations for projects to meet identified needs over the next 25 years. The TIP and TO2050 are key elements of the regional transportation planning process within Portage and Summit counties and northeastern Wayne County.

The Draft TIP and Draft TO2050 will be available for public comment from **March 11** through **April 11** at amatsplanning.org, the AMATS X and Facebook pages - @AMATSPanning, and the AMATS office in downtown Akron. The **March 20** virtual meeting of the **AMATS Citizens Involvement Committee** will present these draft items at **6:30 p.m.** To join this meeting, please visit amatsplanning.org/cic-meeting-registration or call **330-375-2436** for more information.

AMATS is committed to ensuring that individuals with disabilities are able to participate fully in public programs, services, and activities. Anyone who needs an accommodation from AMATS is invited to contact AMATS Public Information Coordinator Kerry Prater at 1 Cascade Plaza, Suite 1300, Akron, OH 44308, (voice) (330) 375-2436 as soon as possible. If you require TDD phone service call Ohio Relay at 800-750-0750 and they will assist in contacting AMATS at (330) 375-2436.

MARCH 15, 2025 THRU MARCH 22, 2025

Akron Metropolitan Area Transportation Study
Citizens Involvement Committee
Thursday, March 20, 2025 – 6:30 p.m.

Meeting Summary

Attendees:

Pete Mohan
Nick Muffet

Staff:

Curtis Baker, AMATS Planning Director
Seth Bush, Geographic Information Systems (GIS) Coordinator
Jeff Gardner, Transportation Planner
Amelia Hoffmeier, GIS Planner
Matt Mullen, Transportation Planner
Matt Stewart, Planning Administrator

I. Welcome

Matt Stewart welcomed the AMATS Citizens Involvement Committee (CIC) meeting attendees.

II. Discussion Items

- A. Mr. Stewart presented Attachment 4A – Draft FY 2026-2029 Transportation Improvement Program FY 2026-2029.

Nick Muffet asked whether the PowerPoint Presentation slides that Mr. Stewart used for his presentation regarding the Draft Transportation Improvement Program (TIP) could be made available to the public. Mr. Stewart said that the slides could be made available to the public through the agency's website – amatsplanning.org – or he could email them to Mr. Muffet.

- B. Mr. Stewart presented Attachment 4B – Draft Transportation Outlook 2050.

- C. Pete Mohan introduced himself to the meeting attendees as a trail analyst and volunteer for the Portage Parks District. Mr. Mohan added that he has a website – bikeportage.com.

Mr. Mohan asked what the next steps are related to the development of the Rubber City Trail. Mr. Stewart said that Phase II construction of the trail is scheduled for next year. Mr. Stewart noted that several phases of construction must occur before the trail is connected to the Ohio & Erie Towpath Trail. Mr. Stewart said that approximately one mile of the trail is completed, and that Phase II is expected to complete an additional three-quarters of a mile.

Mr. Mohan asked if Phase II would extend south from the current trail segment. Mr. Stewart said no and described the next segment's terminus.

Mr. Mohan asked when the Ravenna Road bridge reconstruction project is scheduled. Mr. Stewart said that the project has been rescheduled to 2026 due to railroad issues.

The attendees discussed the proposed Lake Rockwell Trail Project in Portage County.

D. Nick Muffet said that he was covering the meeting on behalf of Signal Akron.

E. Mr. Stewart invited the attendees to the upcoming April 2 and April 3 public meetings regarding the Draft Transportation Outlook 2050.

III. Adjournment

There being no other business, the meeting was adjourned.

The next meeting of the CIC is scheduled for 6:30 p.m. on Thursday, May 8, 2025.

The Draft FY 2026-2029 TIP was developed and available to the public for a 31-day comment period spanning March 11 through April 11. The agency scheduled this period to coincide with the comment period planned by the Ohio Department of Transportation (ODOT) for its State Transportation Improvement Program (STIP) spanning State Fiscal Years 2026 Through 2029. No public comments were received on the Draft FY 2026-2029 TIP.

Appendix C | Self Certification Resolution

Attachment 6C

AKRON METROPOLITAN AREA TRANSPORTATION STUDY

MEMORANDUM

TO: Policy Committee
Technical Advisory Committee
Citizens Involvement Committee

FROM: AMATS Staff

RE: Resolution 2024-12 - Certification of the Urban Transportation Planning Process

DATE: May 1, 2024

In order to remain a Metropolitan Planning Organization (MPO), AMATS must satisfy various requirements each year. One requirement is for the Policy Committee to certify that the urban transportation planning process is being carried out in compliance with all applicable federal requirements.

Every four years, the US DOT certifies whether AMATS is operating the planning process according to federal guidelines. Two years ago, AMATS underwent its federal certification review. At that time, US DOT certified that AMATS may continue to conduct the planning process for another four years, at which point the US DOT will return for another certification review.

One federal requirement pertaining to Title VI of the Civil Rights Act of 1964, requires that AMATS shall not, on the basis of race, color, religion, national origin or sex, exclude anyone from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving federal financial assistance. Consequently, it is the policy of AMATS to provide an environment of nondiscrimination and equal opportunity in employment. The area's regional transportation policies, plans, and programs contained in the Regional Transportation Plan (*Transportation Outlook*) and the Transportation Improvement Program are also compliant with Title VI of the Civil Rights Act of 1964.

The Staff recommends that Resolution 2024-12 be approved.

RESOLUTION NUMBER 2024-12

OF THE METROPOLITAN TRANSPORTATION POLICY COMMITTEE OF THE AKRON METROPOLITAN AREA TRANSPORTATION STUDY

CERTIFICATION OF THE URBAN TRANSPORTATION PLANNING PROCESS

WHEREAS, the Akron Metropolitan Area Transportation Study (AMATS) is designated as the Metropolitan Planning Organization (MPO) by the Governor, acting through the Ohio Department of Transportation (ODOT) and in cooperation with locally elected officials in Summit and Portage Counties, and the Chippewa Township and Milton Township areas of Wayne County, as evidenced in the Agreement of Cooperation, Number 32963, between ODOT and the City of Akron finalized on April 5, 2019; and

WHEREAS, the federal regulations pertaining to Urban Transportation Planning, published as 23 CFR 450.334, require the MPO to certify that the cooperative metropolitan transportation planning process is in conformance with these regulations; and

WHEREAS, the federal regulations published as 23 CFR 450 require that the metropolitan transportation planning process shall include activities to support the development and implementation of a regional transportation plan and a transportation improvement program and subsequent transportation planning activities to the degree appropriate for the area; and

WHEREAS, these activities have been acted upon by the MPO by separate Resolution Number 2024-11, signed and dated May 16, 2024; and

WHEREAS, the federal regulations published as 23 CFR 450.334 also require that the planning process be carried out in accordance with:

- a. Title 23 United States Code (U.S.C.) Section 134 and Title 49 U.S.C. 5303 concerning metropolitan planning for Highways and Transit, respectively;
- b. Sections 174 and 176 (c) and (d) of the Clean Air Act, as amended (42 U.S.C. 7504, 7506 (c) and (d)) and Title 40 Code of Federal Regulations (CFR) part 93 in non-attainment areas;
- c. Title VI of the Civil Rights Act of 1964, as amended (42 U.S.C. 2000d-1) and 49 CFR part 21;
- d. 49 U.S.C 5332, prohibiting discrimination on the basis of race, color, creed, national origin, sex, or age in employment or business opportunity;
- e. Section 1101(b) of the *Bipartisan Infrastructure Law (BIL)* (Pub. L. 117-58) and 49 CFR part 26 regarding the involvement of disadvantaged business enterprises in USDOT-funded projects;
- f. 23 CFR part 230, regarding the implementation of an equal employment opportunity program on federal and federal-aid highway construction contracts;
- g. The provisions of the Americans with Disabilities Act of 1990 (42 U.S.C. 12101 *et seq.*) and 49 CFR parts 27, 37, and 38;
- h. The Older Americans Act, as amended (42 U.S.C. 6101), prohibiting discrimination on the basis of age in programs or activities receiving federal financial assistance;

RESOLUTION NUMBER 2024-12 - Continued

- i. Section 324 of Title 23 U.S.C. regarding the prohibition of discrimination based on gender; and
- j. Section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) and 49 CFR part 27 regarding discrimination against individuals with disabilities.

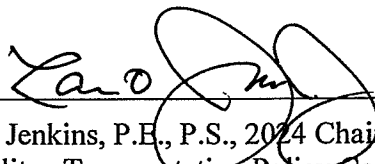

WHEREAS, Title VI of the Civil Rights Act of 1964 requires that AMATS shall not, on the basis of race, color, religion, national origin or sex, exclude anyone from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving federal financial assistance; and

WHEREAS, *Executive Order 12898: Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations* requires that recipients of federal funds make a meaningful effort to involve low-income and minority groups in the process to make decisions regarding the use of federal funds; and also requires that they identify and address any disproportionately high and adverse human health and environmental effects on minority and low-income groups, which may result from the implementation of their plans and programs; and

WHEREAS, in accordance with the *Bipartisan Infrastructure Law (BIL)*, formally known as the *Infrastructure Investment and Jobs Act (P.L. 117-58)*, AMATS, as a Transportation Management Area, is carrying out its planning responsibilities under the applicable provisions of federal law.

NOW THEREFORE BE IT RESOLVED:

1. That this Committee certifies, in consideration of the requirements listed herein and to the degree appropriate for the size of the area and the complexity of its transportation system, that the urban transportation planning process is being carried out in compliance with all applicable federal requirements.
2. That this Committee authorizes the Staff to implement and provide copies of the AMATS Title VI Civil Rights Program Procedures and Documentation, as amended.
3. That this Committee authorizes the Staff to provide copies of this Resolution to the appropriate agencies as evidence of action by the Metropolitan Transportation Policy Committee.

 Larry Jenkins, P.E., P.S., 2024 Chairman
 Metropolitan Transportation Policy Committee

Section 1 | Introduction

Planning, design and construction of major transportation capital investment projects, such as major highway relocations and transit service expansions, are costly and time-consuming. Even relatively minor improvements require a substantial investment of time and resources. To implement transportation projects in a systematic manner, proper planning is essential.

The Akron Metropolitan Area Transportation Study, also referred to as AMATS, is one of the 17 transportation-planning agencies in Ohio. These, and similar agencies throughout the United States, were established as a result of the 1962 Federal Aid Highway Act. This Act requires urban areas of more than 50,000 in population to have a cooperative, continuous and comprehensive (or "3-C") planning process in order to receive federal aid for transportation improvements.

A primary responsibility of AMATS is to prepare and maintain a Transportation Improvement Program (or TIP) that meets the travel needs of people and businesses in Summit and Portage Counties and portions of Wayne County. The TIP is a four-year comprehensive listing of transportation improvements scheduled for implementation with federal or state funds. A project must be included in an area's TIP in order to receive funding assistance from the Federal Highway Administration or the Federal Transit Administration.

As part of preparing the TIP, the AMATS Policy Committee has the lead responsibility for programming transportation projects under the Federal Highway Administration's Surface Transportation Program and Transportation Alternatives Program and the Federal Transit Administration's Urban Formula, Bus and Bus Facilities, and Elderly and Disabled Programs.

The purpose of this report is to document the funding policy guidelines established by the AMATS Policy Committee for these programs and the process to select projects for the TIP. These guidelines reflect the goals outlined in the Regional Transportation Plan that make preserving the existing transportation system the highest priority while continuing to improve safety and reduce congestion. It also includes a procedure to continuously monitor funding programs. It has four main sections.

Section 2 describes the policy guidelines for the programming of federal transportation funds. Section 3 describes the process to select projects for the TIP as well as the process to expedite the implementation of these projects in a timely manner. Section 4 describes the evaluation criteria for each funding program for which the AMATS Policy Committee has the lead responsibility and lastly a map of the federal-aid system and a list of definitions is included.

Section 2 | Policy Guidelines

The AMATS Policy Committee has established a set of Funding Policy Guidelines to be used in selecting projects using federal funding directly attributable to the AMATS area for the TIP. The purpose of this section is to describe these policy guidelines. They are grouped into three categories - Program Administration, General Project Eligibility and Funding Programs.

Program Administration

1. **Responsibility** – The Technical Advisory Committee is responsible for monitoring the federal funding programs attributable to AMATS and making recommendations to the Policy Committee.
2. **Project Review Meetings** – Quarterly project review meetings are scheduled to monitor the status of programmed projects. Project sponsors or their representatives are required to attend.
3. **Project Lockdown** – Sponsors must have their associated project milestone dates finalized by December of each year for projects that are scheduled in the next fiscal year.
4. **Reservoir Projects** – A project that is scheduled in the fourth quarter (April to June) of a fiscal year may be assigned as a reservoir project. This means that the project may sell in either the current fiscal year or the first quarter (July to September) of the next fiscal year and not incur any adverse penalty. Regardless of which fiscal year the project sells in, the project's Plans, Specifications, and Estimate or PS&E package must still be submitted in the current fiscal year.
5. **Funds Management** – If a significant funding balance remains at the end of the current fiscal year, one or more of several options will be pursued to avoid a shortfall of funds. These options include but are not limited to moving reservoir projects as needed, applying funds to remaining projects in that year subject to the funding policy cap and a limit of a 15% increase, or trade/transfer funds with ODOT, County Engineers Association of Ohio, or another MPO.
 - a) If a shortfall in funds in one funding program is a concern, the funding source of one or more projects may be switched or split into two funding sources for items that are eligible for those funds.
 - b) AMATS receives suballocated funds at the discretion of ODOT and US DOT. If ODOT's or US DOT's current funding policy changes in regard to amount of funds suballocated or the elimination of a funding program, AMATS assumes no liability in funding projects that have been affected by these changes.
6. **Fair Share Distribution** – Several AMATS funding programs use equitable distribution of funds as an evaluation criterion. This criterion uses a target budget for each community in the AMATS area. The target budget is based on the community's percent of the population compared to the total funds spent and programmed by AMATS since 1972. The community's percent population for the target budget is calculated using the percent urban population from the 1980 and 1990 Census and total population from the 2000, 2010 and 2020 Census. AMATS' funds programmed for a project in a community is attributed to the community regardless of project sponsor.

General Project Eligibility

1. **Regional Transportation Plan** – All projects implemented with federal funds must be included in or consistent with the approved AMATS Regional Transportation Plan.
2. **Performance Based Planning and Programming** – All projects implemented with federal funds must be included in or consistent with the goals of Performance Based Planning and Programming (PBPP). These policies are established to ensure targeted investment of federal transportation funds by increasing accountability and transparency and providing for better investment decisions that focus on key outcomes

related to seven national goals: safety, infrastructure preservation, congestion reduction, system reliability, freight movement and economic vitality, environmental sustainability and reduced project delivery delays. The Federal Highway Administration (FHWA) has issued three related rules to date. The first rule is for safety performance measures, often referred to as PM1. The second set of rules is those pertaining to pavement and bridge conditions; often referred to as PM2. The third set is the system-wide performance measures, including Freight and CMAQ Measures. These are often referred to as PM3. The transit performance rules are issued by the Federal Transit Administration (FTA), and concern transit asset management (TAM) planning. For a full discussion of PBPP and the AMATS area performance targets, see AMATS Policy Resolution 2022-14 (approved August 11, 2022)

3. Submitting Projects for Funding – A sponsor that submits a project for funding must be a member of AMATS. Generally, every two years the Policy Committee initiates a new round of project funding (see page 23 for a detailed project selection schedule). It is highly recommended that project sponsors submit requests for funding during this two-year cycle of project funding.
4. If a project sponsor feels that their project cannot wait for the normal two-year cycle of funding, the project must be first presented to the TAC TIP Subcommittee for consideration and then to the TAC and Policy Committee for final consideration.
5. Maximum Projects Awarded per Sponsor – The number of STBG and Resurfacing projects awarded to one sponsor shall be three projects per funding category per funding cycle. There is no limit to the number of TASA projects that may be awarded to a sponsor. There is no limit to the number of project applications that a sponsor may submit.
6. Application Legislation – Local commitment, in the form of specific legislation, is required of sponsors and co-sponsor(s) seeking STBG or TASA funding. This ensures that Councils and Boards recognize that the project is being submitted for federal funding and that a local funding match is required. Legislation must include the following: project name, description and cost, an acknowledgement that the sponsor and co-sponsor(s) have read and understand AMATS Funding Policy Guidelines, and that the sponsor and co-sponsor(s) are aware a local match is required. Sample legislation will be included with project applications when they are given to project sponsors. Failure to submit legislation by the established due date may result in cancellation of project application.
7. Ineligible Items – Preliminary engineering and plan development costs, including the development of right-of-way and construction plans are the responsibility of the project sponsor and are not eligible for AMATS funds (except for TASA projects).
8. Logical Termini and Independent Utility – Projects submitted for federal funds must have logical termini and independent utility. This means a project must have rational end points and stand alone when completed. For example, a project may be one phase in a multi-phase project, but each phase must have immediate benefit and use to the public in case additional phases are never funded.
9. Contiguous Projects – Project sponsors that have contiguous projects, such as a phase one and two, may combine their projects after the original approval for funding by AMATS. Combining of projects is subject to the availability of funds and approval by AMATS. AMATS funding for the combined project is not to exceed the sum of the individual project caps that were originally approved for funding.
10. Project Programming Package – Project sponsors must submit a Programming Package to ODOT within 45 days of notification of Policy Committee’s action to approve funding for the project. Failure to do so may result in cancellation of project.

11. Local Let Projects - AMATS funded projects may be ODOT Let or Local Let with ODOT oversight. Local governments who participate in ODOT's Local Let Process are required to take training to ensure they comply with all federal and state laws, regulations and policies. Local Programs staff provides training in the LPA Qualification Process via ODOT's eLearning system administered through LTAP. Training must be taken every five (5) years. Once the training is complete, the LPA may complete the LPA Participation Requirements Review Form. This form will need updated every four (4) years or in the event of a change in key personnel.
12. Planning Studies – Applications that are submitted for planning studies will be evaluated on a case-by-case scenario.
13. The Project Delivery Incentive Program (PDIP) - The purpose of PDIP is to incentivize project sponsors to deliver their projects in a specified time window. If projects are delivered within that time window their local match will be reduced to 10 percent of the amount of federal funds awarded by AMATS (instead of the traditional 20 percent). The maximum reduction shall be capped at \$100,000. The reduction in the local match will be paid for using Toll Revenue Credits (TRC). Typically AMATS has only used TRC to eliminate the local match for planning studies and air quality funding. Currently AMATS is guaranteed access to its TRC through FY2027. The PDIP program will be completely voluntary for project sponsors. As part of the AMATS application process the community can request to take part in the program by marking a box on the project application. There will be no penalty for failing to meet the project delivery goal other than the sponsor will not receive the additional 10 percent benefit. To meet the project delivery goal, the project sponsor must ensure its PS&E document is submitted to ODOT District 4 by the date outlined in the PDIP. If AMATS is not able to fund the project due funding not being available, the project will still receive the reduction of local share of 10 percent when it can be bid.
 - a) Timeline for the PDIP program is as follows:
 - i) Resurfacing program – 2 years from AMATS Resolution Approval
 - ii) STBG program – 4 years from AMATS Resolution Approval
 - iii) TASA program – 2 years from AMATS Resolution Approval
 - b) Project applicants that select to participate in the PDIP will be notified after project funding approval of the timeline for completing their project in order to receive the incentive.
14. Americans with Disabilities Act (ADA) Transition Plan – Applicants must certify that they have developed and maintain an ADA transition plan. Title II of the ADA specifically applies to public entities (state and local governments), and the programs, services, and activities they deliver. Title II Article 8, requires public entities to take several steps designed to achieve compliance with the ADA. ADA transition plans provide a method for a public entity to schedule and implement ADA required improvements to existing streets and sidewalks. The transition plan requires an inventory of the current curb ramps and sidewalks, the identification of barriers, and a system for the removal of these barriers. Transition plans must also include a public involvement component. Applicants will certify the existence of their ADA transition plan in their project application.

Surface Transportation Block Grant (STBG)

Description

The Surface Transportation Block Grant (STBG) provides flexible funding for a wide variety of projects including highways, transit and bicycle and pedestrian facilities. Funding for STBG projects is assigned to MPO areas by Congress and, in addition, ODOT sub allocates a portion of their statewide STBG funding to Ohio MPOs.

Eligibility

STBG funds are the most versatile and may be used for any project that is recommended in or consistent with the AMATS Regional Transportation Plan. STBG funds can be used on any federal-aid roadway classified above a local road or a rural minor collector and bridge projects on any public road.

STBG projects can include highway projects and bridge improvements (construction, reconstruction, rehabilitation, resurfacing, restoration, and operational), transportation system management, public transit capital improvement projects, commuter rail, carpool projects, bus terminals and facilities, bikeways, pedestrian facilities and planning studies.

The AMATS TAC TIP Subcommittee, with consultation from the AMATS staff, reserves the right to consider project applications under another funding program that it deems better suited for the application.

Program Policies

1. Federal Participation
 - a) The maximum federal share for projects under the STBG program is 80% of the total eligible project costs (excluding 100% local items). Federal funds are capped at the approved amount shown in the current TIP.
 - b) Federal funding for STBG projects is either the federal participation rate approved for the project or the total federal funds approved for the project, whichever is less.
2. Local Participation
 - a) The minimum local share is 20% of total eligible project costs (excluding 100% local items). If a sponsor takes advantage of the PDIP program the local share is reduced to 10% of the AMATS federal funding with a maximum reduction of \$100,000.
 - b) The local share for STBG projects is required to be in cash from local, state or other non-federal sources. These projects are not eligible for softmatch credit, or 100% Federal funding participation, regardless of Federal or state eligibility. Planning and engineering costs (including the development of right-of-way and construction plans) are not considered as local share.
3. Right-of-Way – the right-of-way funding may be adjusted from the original amount approved as long as the project's total cap is not increased. These projects have a combined right-of-way and construction cap (see 5 below).
4. Construction/Capital Purchases – the construction funding may be adjusted from the original amount approved as long as the project's total cap is not increased. These projects have a combined right-of-way and construction cap (see 5 below).
5. STBG Funding Cap – STBG projects have a combined right-of-way and construction cap of \$6,000,000 in federal funds. Assuming an 80% Federal share, total project cost should not exceed \$7,500,000. Any cost above this amount is the responsibility of the local sponsor.

6. Project Delays – projects that are delayed or cancelled will be re-evaluated based on the following principles:
7. If a project is delayed due to the lack of programmed federal funds, the project will be rescheduled as soon as funds become available.
 - a) If a project is delayed due to the project sponsor, the project may be cancelled or rescheduled at a later time as not to impact or jeopardize other projects that have met their schedules.
 - b) Project Cost Increases – Project phases scheduled in the next fiscal year will be updated in AMATS funding program to reflect the latest estimates. Project sponsors must submit revised project cost estimates for the phase that is scheduled in the next fiscal year.
 - c) If the revised project cost estimate is lower than the original estimate, AMATS federal share, as shown in AMATS Funding Program and Balances Table, will be adjusted accordingly to reflect 80% of the revised estimate. The project cost shown in the TIP will not be changed and the project is still eligible to receive federal funding up to 80% of the original estimate.
8. If the revised project cost estimate, based on the original scope, is higher than the original estimate, AMATS federal share may be increased up to 80% of the revised estimate.
9. AMATS federal share increase is limited to 15% above the original federal share programmed for the project and is not to exceed the funding policy cap for right-of-way and construction. The AMATS Staff has the authority to make funding decisions for project cost increases based on the availability of funds. If a project is already at the AMATS funding policy cap, project cost increase requests must be reviewed by the TAC TIP Subcommittee, TAC and Policy Committee, with the Policy Committee having final decision-making authority. Situations not specified herein will be reviewed by the TAC TIP Subcommittee.
10. Major Changes to Project Funding – Projects which have already received federal STBG funds through AMATS are not eligible to apply for additional STBG funds through AMATS normal application cycle. If additional funding for a project is necessary a request must be made to the AMATS Staff and will be reviewed by the TAC TIP Subcommittee, TAC and Policy Committee, with the Policy Committee having final decision-making authority.
11. Self-Scoring – AMATS strongly recommends communities self-score their applications before submitting them for consideration.

Transportation Alternatives Set Aside (TASA)

Description

The Transportation Alternatives Program (TASA) provides funding for bicycle and pedestrian facilities. Funding for TASA projects is assigned to MPO areas by Congress and, in addition, ODOT sub allocates a portion of their statewide TASA funding to Ohio MPOs.

Eligibility

All TASA projects must relate to surface transportation and must address a transportation need, use, or benefit. Project categories include pedestrian and bicycle facilities including Safe Routes to School infrastructure projects. Preliminary engineering, right-of-way and construction are eligible project costs. Planning is an eligible project phase only for SRTS District-wide Travel Plans and only if the sponsor has first pursued and secured funding from ODOT's SRTS program. TASA applications for shared use paths or sidepaths (i.e. trails) must have a feasibility study for the project completed by the time funding is awarded by Policy Committee resolution. AMATS

recommends using an ODOT prequalified consultant found under the Bicycle Facilities and Enhancement Design area at the following link:

<https://www.transportation.ohio.gov/wps/portal/gov/odot/working/contracts/prequal-cert/welcome>

The feasibility study must include the following:

- Reasonable assurance that the preferred alignment conforms to AASHTO standards
- Certified cost estimate
- Planning level analysis to identify concerns (i.e. red flags) regarding environment, rights-of-way, slope, soil and historical/cultural impediments

The AMATS TAC TIP Subcommittee, with consultation from the AMATS staff, reserves the right to consider project applications under another funding program that it deems better suited for the application.

FY2024/2025/2026 TASA Supplemental Funding Pilot Program

The purpose of the TASA Supplemental Funding is to develop a reservoir list of projects that could use additional TASA funding to deliver a project in the upcoming fiscal years of 2024, 2025, 2026. To qualify for TASA Supplemental Funding an existing AMATS project must have TASA eligible elements included in the current project. AMATS staff will score projects based on the existing TASA criteria. AMATS staff will develop a rank scoring for supplemental funding and funding will be awarded based on funds availability.

Supplemental funding will only be awarded if AMATS staff determines there will be a balance of TASA funding in that fiscal year. If a balance exists, AMATS staff will award additional TASA funding to the project based on the rank scoring of the funding round by fiscal year.

Any existing federally funded project is eligible for TASA Supplemental Funding (if it contains TASA eligible components) and the additional funding will not count towards the project funding cap of the originally awarded AMATS funds. The maximum supplemental funding award is \$500,000.

Program Policies

1. Ownership – The proposed Alternative project must be publicly owned and on existing publicly owned property (except when property acquisition is part of the proposal).
2. Cost Estimates – Cost estimates for TASA projects must be submitted by a professional engineer or architect.
3. Maintenance – Maintenance-type projects or work items, such as sidewalk replacement and bikeway resurfacing or regrading, are not eligible for TASA funding.
4. Upgrading – Upgrading trails (such as converting a granular-surfaced bikeway to asphalt or concrete) are eligible for funding except if previously funded with federal funds through AMATS. Sidewalks are eligible for upgrading if the project is taking a standard sidewalk and substantially widening it to accommodate multiple uses (ex. upgrading a 4-foot sidewalk to an 8-foot sidewalk to accommodate bicycle traffic)
5. Federal Participation

- a. The maximum federal share for projects under the TASA Program is 80% of total eligible project costs (excluding 100% local items). Federal funds are also capped at the approved amount shown in the current TIP.
 - b. Federal funding participation for TASA projects is either the federal participation rate approved for the project, or the total federal funds approved for the project, whichever is less.
6. Local Participation
 - a. The minimum local share is 20% of total eligible project costs (excluding 100% local items). If a sponsor takes advantage of the PDIP program the local share is reduced to 10% of AMATS federal funding with a maximum reduction of \$100,000 (based on the maximum TASA funding by AMATS of \$1,000,000).
 - b. The local share for TASA projects is required to be in cash from local, state or other non-federal sources. These projects are not eligible for softmatch credit, or 100% Federal funding participation, regardless of Federal or state eligibility. Planning is not considered as local share.
7. Planning – The planning funding approved for a SRTS Plan is that Plan’s funding cap. Any unused funds cannot be transferred to a SRTS Plan’s recommended infrastructure project. Up to 10% of the annual TASA allocation may be set aside to fund SRTS District-wide Plans.
8. Preliminary Engineering – The preliminary engineering funding may be adjusted from the original amount approved as long as the project’s total cap is not increased (see 11 below). Up to 25% of the annual TASA allocation may be set aside to fund preliminary engineering.
9. Right-of-Way
 - a. The right-of-way funding may be adjusted from the original amount approved as long as the project’s total cap is not increased (see 11 below).
 - b. Right-of-way acquisition may be included only as a part of the cost for the entire project, not as a stand-alone project.
10. Construction/Capital Purchases – the construction funding may be adjusted from the original amount approved for funding as long as the project’s total cap is not increased (see 11 below).
11. TASA Funding Cap – TASA projects have a combined preliminary engineering, right-of-way and construction cap of \$1,000,000 in federal funds. Assuming an 80% Federal share, total project cost should not exceed \$1,250,000. Any cost above this amount is the responsibility of the local sponsor.
12. Project Cost Increases – Project phases scheduled in the next fiscal year will be updated in AMATS funding program to reflect the latest estimates. Project sponsors must submit revised project cost estimates for the phase that is scheduled in the next fiscal year.
 - a. If the revised project cost estimate is lower than the original estimate, AMATS federal share, as shown in AMATS Funding Program and Balances Table, will be adjusted accordingly to reflect 80% of the revised estimate. The project cost shown in the TIP will not be changed and the project is still eligible to receive federal funding up to 80% of the original estimate.
 - b. If the revised project cost estimate, based on the original scope, is higher than the original estimate, AMATS federal share may be increased up to 80% of the revised estimate.
 - c. AMATS federal share increase is limited to 15% above the original federal share programmed for the project and is not to exceed the funding policy cap for right-of-way and construction. The AMATS Staff has the authority to make funding decisions for project cost increases based on the availability of funds. If a project is already at the AMATS funding policy cap, project cost increase requests must be reviewed by the TAC TIP Subcommittee, TAC and Policy Committee,

with the Policy Committee having final decision-making authority. Situations not specified herein will be reviewed by the TAC TIP Subcommittee.

13. Major Changes to Project Funding – Projects which have already received federal TASA funds through AMATS are not eligible to apply for additional TASA funds through AMATS normal application cycle. If additional funding for a project is necessary a request must be made to the AMATS Staff and will be reviewed by the TAC TIP Subcommittee, TAC and Policy Committee, with the Policy Committee having final decision-making authority.
14. Self-Scoring – AMATS strongly recommends communities self-score their applications before submitting them for consideration.

AMATS Resurfacing Program

Description

Resurfacing projects on non-state routes using AMATS STBG funds.

Eligibility

Eligible routes for resurfacing include principal and minor arterials, urban collectors and major rural collectors that are not on a state route. Minor rural collector and local roadways are not eligible for federal funding. In order to be consistent with the ODOT Urban Paving Program, the eligibility of an item will be as outlined in ODOT's Urban Paving Policy with the exception of full and partial depth pavement repair and ADA sidewalk ramps, which are eligible for AMATS funding. Work items not directly related to the pavement resurfacing are not eligible for funding such as culvert replacement, street trees and guardrail. Roadways with a Pavement Condition Rating (PCR) of greater than 80 are also not eligible for funding.

The AMATS TAC TIP Subcommittee, with consultation from the AMATS staff, reserves the right to consider project applications under another funding program that it deems better suited for the application.

Program Policies

1. Resurfacing – Resurfacing is defined as a thin asphalt type overlay, not to exceed 3 inches, or similar treatment. Geofabric is eligible. Concrete roadways are not eligible unless being overlaid with asphalt.
2. Reconstruction – Pavements in need of reconstruction are not eligible for AMATS Resurfacing Program funds. A project is considered roadway reconstruction and not resurfacing when over 25% of the pavement surface area within the project limits needs repaired or replaced.
3. Structures – Any work on structures beyond the asphalt type overlay as mentioned above is not eligible for funding.
4. Frequency of Resurfacing – Sponsors are responsible for maintaining their roadways so that the pavement does not deteriorate prematurely. AMATS will only provide funding for resurfacing at a minimum of 10-year intervals if the previous resurfacing involved federal funds. The 10-year interval begins on the date the last resurfacing was completed and does not include temporary overlays.
5. Federal Participation
 - a. The maximum federal share for projects under the Resurfacing program is 80% of the total eligible project costs (excluding 100% local items). Federal funds are capped at the approved amount shown in the current TIP.

- b. Federal funding participation for Resurfacing projects is either the federal participation rate approved for the project, or the total federal funds approved for the project, whichever is less.
 - c. A minimum of 20% of the annual STBG allocation will be set aside as a target budget to fund this program.
- 6. Local Participation
 - a. The minimum local share is 20% of total eligible costs (excluding 100% local items). If a sponsor takes advantage of the PDIP program the local share is reduced to 10% of AMATS federal funding with a maximum reduction of \$100,000 (based on the maximum Resurfacing funding by AMATS of \$800,000).
 - b. The local share for Resurfacing projects is required to be in cash from local, state or other non-federal sources. These projects are not eligible for softmatch credit, or 100% Federal funding participation, regardless of Federal or state eligibility. Planning and engineering costs (including the development of right-of-way and construction plans) are not considered as local share.
- 7. Right-of-Way – the right-of-way phase is not eligible for funding.
- 8. Resurfacing Funding Cap – Resurfacing projects have a construction cap of \$800,000 in federal funds. Assuming an 80% Federal share, total project cost should not exceed \$1,000,000. Any cost above this amount is the responsibility of the local sponsor.
- 9. Project Delays – Funding for STBG projects that are delayed or cancelled will be re-evaluated based on the following principles:
 - a. If a project is delayed due to the lack of programmed federal funds, the project will be rescheduled as soon as funds become available.
 - b. If a project is delayed due to the project sponsor, the project may be cancelled or rescheduled at a later time as not to impact or jeopardize other projects that have met their schedules.
- 10. Project Cost Increases – Project phases scheduled in the next fiscal year will be updated in AMATS funding program to reflect the latest estimates. Project sponsors must submit revised project cost estimates for the phase that is scheduled in the next fiscal year.
 - a. If the revised project cost estimate is lower than the original estimate, AMATS federal share, as shown in AMATS Funding Program and Balances Table, will be adjusted accordingly to reflect 80% of the revised estimate. The project cost shown in the TIP will not be changed and the project is still eligible to receive federal funding up to 80% of the original estimate.
 - b. If the revised project cost estimate, based on the original scope, is higher than the original estimate, AMATS federal share may be increased up to 80% of the revised estimate.
 - c. AMATS federal share increase is limited to 15% above the original federal share programmed for the project and is not to exceed the funding policy cap for right-of-way and construction. The AMATS Staff has the authority to make funding decisions for project cost increases based on the availability of funds. If a project is already at the AMATS funding policy cap, project cost increase requests must be reviewed by the TAC TIP Subcommittee, TAC and Policy Committee, with the Policy Committee having final decision-making authority. Situations not specified herein will be reviewed by the TAC TIP Subcommittee.
- 11. Major Changes to Project Funding – Projects which have already received federal STBG funds through AMATS are not eligible to apply for additional STBG funds through AMATS normal application cycle. If additional funding for a project is necessary a request must be made to the AMATS Staff and will be

reviewed by the TAC TIP Subcommittee, TAC and Policy Committee, with the Policy Committee having final decision making authority.

12. Self-Scoring – AMATS strongly recommends communities self-score their applications before submitting them for consideration.

Carbon Reduction Program (CRP)

Description

The Infrastructure Investment and Jobs Act (IIJA) establishes the Carbon Reduction Program (CRP), which provides funds for projects designed to reduce transportation emissions, defined as carbon dioxide (CO₂) emissions from on-road highway sources.

Eligibility

Eligible routes for the CRP include principal and minor arterials, urban collectors and major rural collectors that are not on a state route. Minor rural collector and local roadways are not eligible for federal funding.

CRP funds may be used to establish new or expanded transportation projects that reduce carbon emissions. Projects eligible for CRP funds include roundabouts, operational projects that improve traffic flow, clean fuel bus purchases, and bicycle and pedestrian projects.

The AMATS TAC TIP Subcommittee, with consultation from the AMATS staff, reserves the right to consider project applications under another funding program that it deems better suited for the application.

Program Policies

1. Federal Participation
 - a. The maximum federal share for projects under the CRP program is 80% of the total eligible project costs (excluding 100% local items). Federal funds are capped at the approved amount shown in the current TIP.
 - b. Federal funding for CRP projects is either the federal participation rate approved for the project, or the total federal funds approved for the project, whichever is less.
2. Local Participation
 - a. The minimum local share is 20% of total eligible project costs (excluding 100% local items).
 - b. The local share for CRP projects is required to be in cash from local, state or other non-federal sources. These projects are not eligible for softmatch credit, or 100% Federal funding participation, regardless of Federal or state eligibility. Planning and engineering costs (including the development of right-of-way and construction plans) are not considered as local share.
3. Right-of-Way – the right-of-way funding may be adjusted from the original amount approved as long as the project's total cap is not increased. These projects have a combined right-of-way and construction cap (see 5 below).
4. Construction/Capital Purchases – the construction funding may be adjusted from the original amount approved as long as the project's total cap is not increased. These projects have a combined right-of-way and construction cap (see 5 below).

5. CRP Funding Cap – CRP projects have a combined right-of-way and construction cap of \$2,000,000 in federal funds. Assuming an 80% Federal share, total project cost should not exceed \$2,500,000. Any cost above this amount is the responsibility of the local sponsor.
6. Project Delays – projects that are delayed or cancelled will be re-evaluated based on the following principles:
 - a. If a project is delayed due to the lack of programmed federal funds, the project will be rescheduled as soon as funds become available.
 - b. If a project is delayed due to the project sponsor, the project may be cancelled or rescheduled at a later time as not to impact or jeopardize other projects that have met their schedules.
7. Project Cost Increases – Project phases scheduled in the next fiscal year will be updated in AMATS funding program to reflect the latest estimates. Project sponsors must submit revised project cost estimates for the phase that is scheduled in the next fiscal year.
 - a. If the revised project cost estimate is lower than the original estimate, AMATS federal share, as shown in AMATS Funding Program and Balances Table, will be adjusted accordingly to reflect 80% of the revised estimate. The project cost shown in the TIP will not be changed and the project is still eligible to receive federal funding up to 80% of the original estimate.
 - b. If the revised project cost estimate, based on the original scope, is higher than the original estimate, AMATS federal share may be increased up to 80% of the revised estimate.
 - c. AMATS federal share increase is limited to 15% above the original federal share programmed for the project and is not to exceed the funding policy cap for right-of-way and construction. The AMATS Staff has the authority to make funding decisions for project cost increases based on the availability of funds. If a project is already at the AMATS funding policy cap, project cost increase requests must be reviewed by the TAC TIP Subcommittee, TAC and Policy Committee, with the Policy Committee having final decision-making authority. Situations not specified herein will be reviewed by the TAC TIP Subcommittee.
8. Major Changes to Project Funding – Projects which have already received federal STBG funds through AMATS are not eligible to apply for additional STBG funds through AMATS normal application cycle. If additional funding for a project is necessary a request must be made to the AMATS Staff and will be reviewed by the TAC TIP Subcommittee, TAC and Policy Committee, with the Policy Committee having final decision-making authority.
9. Self-Scoring – AMATS strongly recommends communities self-score their applications before submitting them for consideration.

Pavement Repair & Sidewalk Ramp Program

Description

ODOT's Urban Paving Program includes participation in resurfacing state and US routes within municipalities. In accordance with ODOT's Policy, ODOT District 4 requires that all partial and full depth pavement repairs within the project limits be completed before or in conjunction with a resurfacing project that has been scheduled under its paving program. Municipalities are responsible for funding these pavement repairs.

In accordance with the Americans with Disabilities Act of 1990 (ADA), ODOT District 4 also requires that all sidewalk ramps within the project limits meet the current standards and be completed before or in conjunction with

a resurfacing project that has been scheduled under the paving program. Municipalities are also responsible for all sidewalk ramps costs.

Title II of the ADA specifically applies to public entities (state and local governments), and the programs, services, and activities they deliver. Title II Article 8, requires public entities to take several steps designed to achieve compliance with the ADA. The first step in this compliance is the development of an ADA transition plan. The ADA transition plan should include:

1. A list of the physical barriers in a public entity's facilities that limit the accessibility of its programs, activities, or services to individuals with disabilities.
2. A detailed outline of the methods to be utilized to remove these barriers and make the facilities accessible.
3. The schedule for taking the necessary steps to achieve compliance with Title II.
4. The name of the official responsible for the plan's implementation.

Transition plans provide a method for a public entity to schedule and implement ADA required improvements to existing streets and sidewalks. The transition plan requires an inventory of the current curb ramps and sidewalks, the identification of barriers, and a system for the removal of these barriers. Transition plans must also include a public involvement component. AMATS requires that all of its members have an ADA Transition Plan, and certify this as part of the project funding application process.

Eligibility

Resurfacing projects on State and US routes within municipalities scheduled under ODOT's Urban Paving Program.

Program Policies

AMATS may participate in funding these partial and full depth pavement repairs and sidewalk ramps with STBG funds at an 80% share. The AMATS staff has the authority to make funding decisions of up to \$150,000 in federal funds per project for a combination of both the pavement repairs and ADA ramps. This action is subject to the availability of funds. The AMATS Policy Committee will make funding decisions for projects that require more than the \$150,000 federal share for these items.

FTA Urbanized Area Formula (Section 5307) Program

Description

The Federal Transit Administration (FTA) Section 5307 Program funding is apportioned to each Urbanized Area as a transportation block grant. These funds are flexible and may be used for a variety of transportation projects. However, these funds tend to be used for transit projects such as bus replacements and other transit capital projects. For urbanized areas over 200,000 in population, such as Akron, Section 5307 funds may only be used for capital expenses. The exceptions to this restriction include expenses for preventive maintenance, the capital cost of leasing, planning, and complementary ADA paratransit service. The funding participation rate is generally 80% federal and 20% local. See the FTA circular for program guidance.

Eligibility

Grants under the Urbanized Area Formula Program are available to finance planning and capital projects. Capital projects include acquisition, construction, improvement, and maintenance of facilities and equipment for use in

public transit. Eligible purposes include planning, engineering design and evaluation of transit projects and other technical transportation-related studies; capital investments in bus and bus-related activities such as replacement of buses, overhaul or rebuilding of buses, security equipment and construction of maintenance and passenger facilities; and capital investments in new and existing fixed guideway systems including rolling stock, overhaul and rebuilding of vehicles, track, signals, communications and computer hardware and software. All preventive maintenance costs are considered capital costs.

Program Policies

1. **Designated Recipients** – Currently, the only designated recipients of Section 5307 funds in the AMATS area are METRO RTA in Summit County and PARTA in Portage County. Both METRO and PARTA receive the bulk of their Section 5307 funds from the Akron Urbanized Area’s apportionment and receive smaller suballocations from the apportionment to the Cleveland Urbanized Area. Medina County Public Transit (MCPT) serves a portion of the Akron Urbanized Area, in and adjoining the Wadsworth area. As a result, MCPT will receive a portion of these formula funds as described in the Memorandum of Understanding signed in 2013 (AMATS Policy Resolution 2013-15; September 25, 2013). NOACA serves as the Metropolitan Planning Organization for MCPT.
2. **Evaluation of Projects** – Annually, METRO and PARTA will submit a draft project list to AMATS requesting Section 5307 funds. The staff will ensure that the project lists are consistent with the Regional Transportation Plan, as well as the region’s Transit Asset Management (TAM) planning activities. AMATS, METRO and PARTA will collaborate to ensure the appropriate and efficient use of funds and then make recommendations to the Policy Committee and Technical Advisory Committee based on the priorities of the Regional Transportation Plan. If issues arise with a specific project that the staff cannot resolve, the TAC TIP Subcommittee will be called on to resolve the issue.
3. **Cleveland Urbanized Area Section 5307 Funds** – AMATS is responsible for programming the projects that METRO and PARTA will fund with the Section 5307 funds they receive from the Cleveland Urbanized Area’s apportionment. Annually, AMATS will work with METRO and PARTA to ensure that FTA obligates all the Cleveland Urbanized Area Section 5307 funds prior to obligating any Akron Urbanized Area funds.
4. **Program Funding Cap** – There is no funding cap for the Section 5307 Program.

FTA Enhanced Mobility of Seniors and Individuals with Disabilities (Section 5310) Program

Description

The Federal Transit Administration (FTA) Enhanced Mobility of Seniors and Individuals with Disabilities (Section 5310) Program provides funding for the purpose of assisting non-profit human/social services agencies, as well as providers of public transportation, in meeting the special transportation needs of the elderly and those with disabilities. This competitive grant program is administered by the ODOT Office of Transit as the Specialized Transportation Program. See the FTA circular for program guidance.

To receive FTA Section 5310 funding, an area must develop and maintain a locally developed coordinated transportation plan, as mandated by federal guidance. Local projects must be consistent with the AMATS Coordinated Public Transit – Human Services Transportation Plan (Coordinated Plan), as well as the region’s Transit

Asset Management (TAM) planning activities. The current Coordinated Plan was approved by the AMATS Policy Committee on May 10, 2018 (see Resolution 2018-11).

Eligible Projects

Grants under the FTA Section 5310 program are available to finance capital and, on a limited basis, operating expenses. Funding may be awarded to qualified public agencies, regional transit authorities and for-profit providers of shared-ride transportation. Eligible projects include (but are not limited to):

- Capital Rolling Stock & Related Equipment – accessible buses, vans and other vehicles, on-board communications equipment, and computer hardware and software to aid in the efficiency and coordination of transportation for the elderly and those with disabilities.
- Capital Projects to Increase Access to Transportation – public transportation projects exceeding ADA requirements, construction of accessible shelters, infrastructure to improve access to transit stops that are not currently accessible, etc.
- Operating Assistance – feeder services to provide access to fixed-route bus stops, new service to meet the needs of seniors and the disabled in areas where existing services are insufficient, inappropriate or unavailable and alternatives to public transportation.

Program Policies

1. Designated Recipients – METRO RTA and PARTA are direct recipients of FTA funds, and are eligible to receive Section 5310 funds. Social service agencies are also eligible to receive Section 5310 funds, and will receive those funds through ODOT acting as the designated recipient of funds. ODOT's Program Management Plan (PMP) describes the designated recipient's policies and procedures for administering FTA Section 5310 funds. The PMP is discussed in the ODOT Coordinated Public Transit – Human Services Transportation Plan. The PMP also describes the competitive selection process.
2. Administrative Expenses Reimbursement – Per the FTA Section 5310 program provisions, the designated recipient (ODOT) may set aside up to 10% of total program funds for the reimbursement of administrative, planning and technical assistance expenses.
3. Evaluation of Projects – All projects must be competitively selected and consistent with the region's Coordinated Plan. ODOT Office of Transit maintains evaluation criteria for the FTA Section 5310 program. All projects must meet minimum scoring requirements. ODOT will evaluate and prioritize all projects in coordination with AMATS, in keeping with the recommendations established within the Coordinated Plan and in consideration of the total funding available. Projects that are not consistent with the Coordinated Plan will not be scored or considered for funding. The AMATS Policy Committee will be responsible for final approval of the projects that receive Section 5310 funding.
4. Program Funding Cap – There is no funding cap for the FTA Section 5310 program.

FTA Bus and Bus Facilities (Section 5339) Program

Description

The Federal Transit Administration (FTA) Bus and Bus Facilities (Section 5339) Program provides capital funding to replace, rehabilitate and purchase buses and related equipment, and to construct bus-related facilities. Several years ago federal surface transportation legislation created this program to replace the FTA Section 5309 Bus and Bus Facilities Program.

Funds will be formulaically allocated to the Akron urbanized area (UZA), in accordance with the grant requirements established by the FTA Section 5307 program. The designated recipients of program funding are operators of fixed-route bus services, which include METRO RTA and PARTA in the AMATS region. Public agencies or private non-profit organizations engaged in public transportation are eligible subrecipients. The funding participation rate is 80% federal and 20% local.

Eligibility

Grants under the Bus and Bus Facilities program are available to finance capital projects. Eligible activities include the replacement, rehabilitation and purchase of buses, vans, and related equipment, and the construction of bus-related facilities.

Program Policies

1. Designated Recipients – As the AMATS region’s two operators of fixed-route bus service, METRO in Summit County, and PARTA in Portage County are the designated recipients for Section 5339 funding. Both METRO and PARTA receive the bulk of their Section 5339 funding from the Akron Urbanized Area’s apportionment and may receive smaller sub allocations from the apportionment to the Cleveland Urbanized Area.
2. Evaluation of Projects – Annually, METRO and PARTA will submit a draft project list to AMATS requesting Section 5339 funds. The staff will ensure that the project lists are consistent with the Regional Transportation Plan, as well as the region’s Transit Asset Management (TAM) planning activities. AMATS, METRO and PARTA will collaborate to ensure the appropriate and efficient use of funds and then make recommendations to the Policy Committee and Technical Advisory Committee based on the priorities of the Regional Transportation Plan. If issues arise with a specific project that the staff cannot resolve, the TAC TIP Subcommittee will be called on to resolve the issue.
3. Cleveland Urbanized Area Section 5339 Funds – AMATS is responsible for programming the projects that METRO and PARTA will fund with Section 5339 funds they receive from the Cleveland Urbanized Area’s apportionment. Annually, AMATS will work with METRO and PARTA to ensure that FTA obligates all of the Cleveland Urbanized Area Section 5339 funds prior to obligating any Akron Urbanized Area funds.
4. Program Funding Cap – There is no funding cap for the FTA Section 5339 program.

Section 3 | TIP Project Selection and Implementation Process

Final selection of STBG, TASA, Resurfacing, FTA Section 5307 Urban Area Formula, Section 5310 Enhanced Mobility of Seniors and Individuals with Disabilities and Section 5339 Bus and Bus Facilities projects is the responsibility of the AMATS Policy Committee. The Policy Committee has assigned specific duties to the Technical Advisory Committee (TAC) and the TAC TIP Subcommittee. In this section, the assigned duties of the TAC and the TAC TIP Subcommittee are listed. In addition, the steps included in the process to select projects for funding are described.

Duties of the Technical Advisory Committee

The Policy Committee has assigned to the Technical Advisory Committee the following duties in the development and monitoring of the STBG, TASA, Resurfacing and FTA Sections 5307, 5310 and 5339 funding programs:

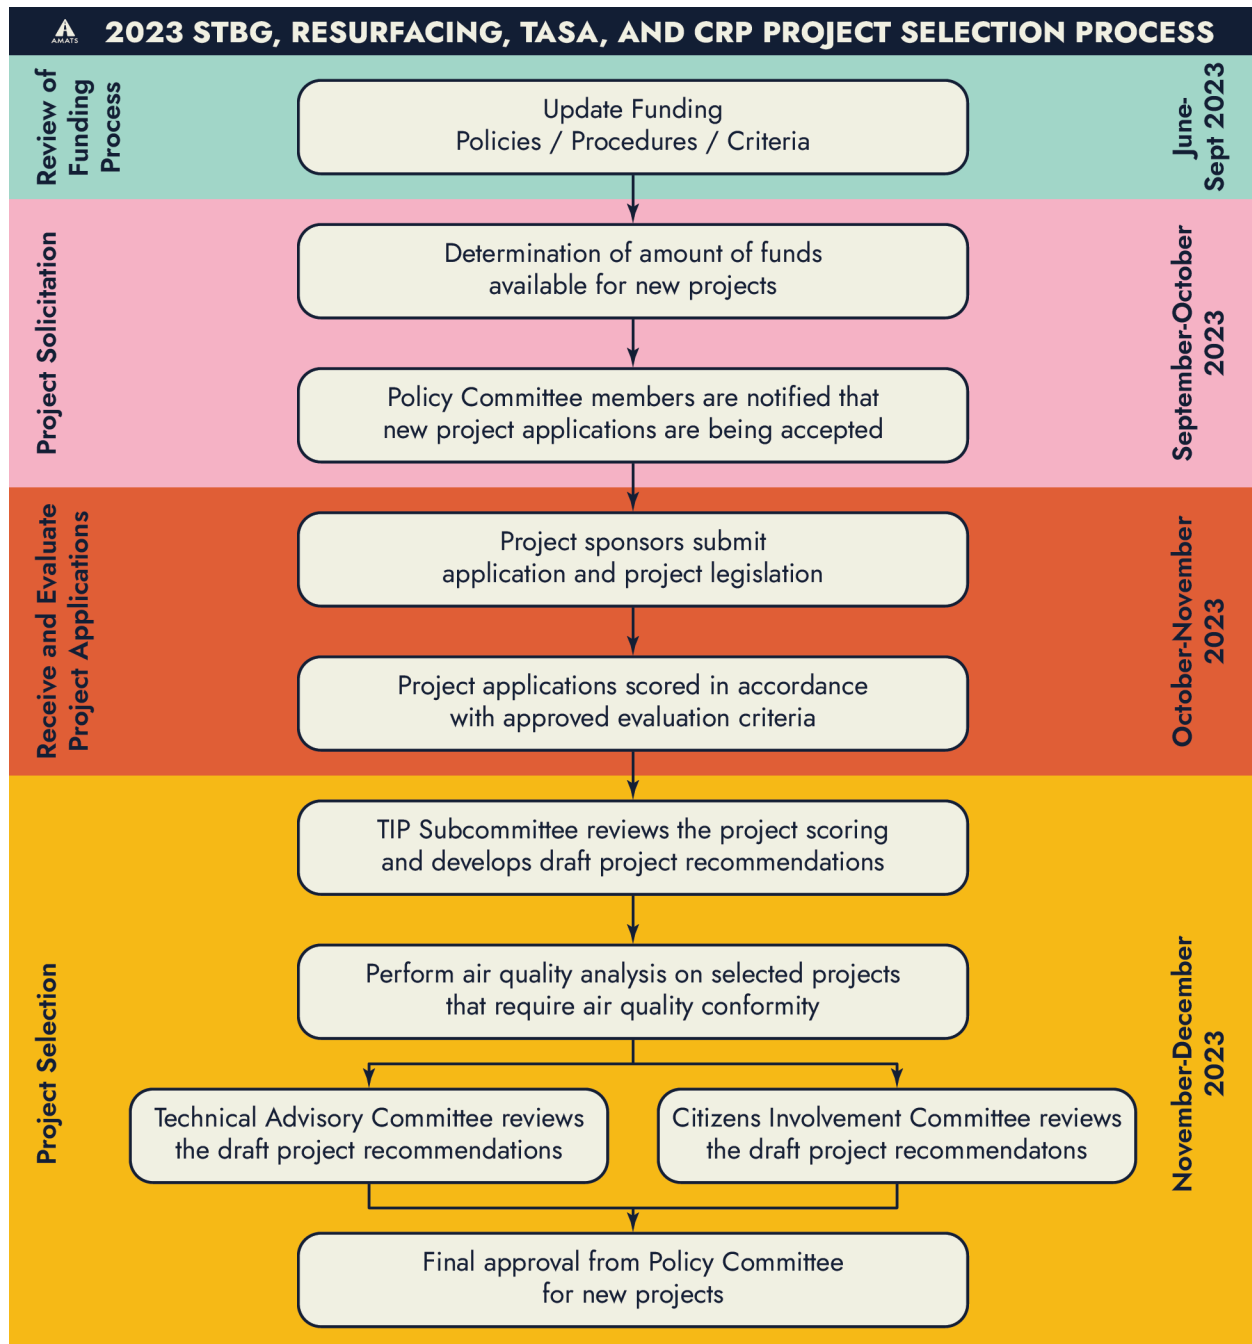

- a. Review project schedules, project costs and funding programs and provide a periodic TIP Status Report to the Policy Committee.
- b. Appoint a TIP Subcommittee to monitor TIP funding and project activity. The TAC Chairman will direct this Subcommittee and its membership shall include the Policy Committee Chairperson, one representative from each city with a population of over 20,000, a representative from a city with a population between 10,000 and 20,000 appointed by the Policy Committee Chairperson, a representative from a city with a population between 5,000 and 10,000 appointed by the Policy Committee Chairperson, a village representative appointed by the Policy Committee Chairperson, the Summit and Portage County Engineers, Portage Area Regional Transportation Authority and METRO Regional Transit Authority. Each member of the Subcommittee has one vote. The chairman can only vote if his or her community is not otherwise represented. Policy Committee Chairperson appointments will be made before a round of AMATS funding begins. The appointees will serve for two years until the next round of funding.
- c. Provide recommendations to the Policy Committee for the purpose of adding, deleting or altering TIP projects. In developing its recommendations, the TAC will consider the results of an evaluation of project applications, TIP Subcommittee project funding recommendations, the goals and objectives of the AMATS Regional Transportation Plan, project development schedules, funding availability through other federal programs, anticipated availability of AMATS attributable federal funds, and an equitable distribution of funding among communities or agencies.

Duties of the TAC TIP Subcommittee

The Policy Committee has assigned the TAC TIP Subcommittee the following funding policies and programming procedures activities. Staff assistance will be provided to the TAC TIP Subcommittee in performing these duties.

- a. Conduct quarterly project review meetings to monitor the status of projects selected for funding.
- b. Provide periodic TIP Status Reports to TAC. The report will include an update of project schedules, project costs and funding availability.
- c. Solicit project applications based on the availability of federal funds.
- d. Conduct a preliminary review of proposed projects.

- e. Review project applications, apply project criteria, and provide to the TAC a listing of project funding recommendations.
- f. Complete air quality conformity evaluations as needed.

Section 4 | Project Evaluation Criteria

Surface Transportation Block Group Program (STBG)		
Roadway Condition (Maximum 30 Points)		Points
<i>PCI Value</i>		
0-50		30
50-60		25
61-70		20

TRANSPORTATION IMPROVEMENT PROGRAM | FY2026-2029

Section 5 | Appendix

Esri, HERE, Garmin, SafeGraph, METI/NASA, USGS, EPA, NPS, USDA

Appendix E | Ohio STIP Revisions Guidelines

OHIO STIP REVISIONS GUIDELINES

Introduction

In accordance with the provisions found in Title 23 Code of Federal Regulation Part 450 and Title 49 Code of Federal Regulation Part 613, this document establishes the guidelines for revising the Ohio Statewide Transportation Improvement Program (STIP). Ohio STIP revisions will be processed in accordance with the applicable federal provisions, adhere to the approved public involvement procedures, ensure reasonable fiscal constraint is maintained, and adhere to the appropriate conformity determination procedures. The Ohio STIP Revisions Guidelines will be included in the STIP by reference.

Each Metropolitan Planning Organization (MPO) may elect to follow these guidelines without change or implement more restrictive Transportation Improvement Program (TIP) revision procedures. In all cases, MPO procedures for TIP revisions shall be developed under the guidance of 23 CFR 450, 49 CFR 613, and this document. The TIP revision procedures shall be included in the MPO TIP directly or by reference.

Additional information on Ohio's STIP processes may be found in the Ohio S/TIP Development Guidance on the STIP website.

STIP Revisions

A STIP revision is a change that is made between full updates of the STIP. ODOT coordinates project data with MPOs and Regional Transportation Planning Organizations (RTPOs) per an established schedule to assist in identifying needed S/TIP revisions. There are two types of STIP revisions: (1) amendments and (2) administrative modifications.

1. STIP Amendment

A STIP amendment is a major revision that requires federal review and approval, public review and comment, redemonstration of fiscal constraint, and as applicable in nonattainment and maintenance areas conformity determination. Amendments include:

Highway (FHWA Projects)

- **Addition/removal of project/phase from STIP period** - e.g. Add project or phase to individual STIP list, move project or phase funding into or out of current 4-year STIP period, cancel project, etc.;
- **Addition/removal of STIP group** - e.g. New MPO group added, etc.;
- **Phase/group funding revision over threshold** (see [Figure 1](#)) - e.g. \$10M phase or group estimate increases to \$12.1M, etc.;
- **Air Quality change** - i.e. Exempt to/from Analyzed/Non-Exempt
- **Design/scope change** (add/remove transportation feature) - e.g. Bridge work added to resurfacing project; changing from a pavement maintenance to an intersection expansion; etc.;
- **All other major changes to highway projects or STIP document**

Transit (FTA Projects)

- **Addition/removal of project from STIP period** - e.g. Add PID to individual STIP list, move PID funding in/out of the current 4-year STIP period, cancel PID, etc.
- **Addition/removal of STIP group** - e.g. new Transit group added, etc.
- **Project funding revision over threshold** (see [Figure 1](#)) - e.g. \$5M PID estimate increased to \$6.6M, etc.
- **Air Quality change** - i.e. Exempt to/from Analyzed/Non-Exempt
- **Addition/removal of scope** - e.g. scope 111-00 activities removed, scope 114-000 activities added, etc.
- **All other major changes to transit projects, groups, and/or STIP document**

Amendment Procedures

ODOT will revise the STIP by amendment in coordination with MPOs and RTPOs per the established quarterly schedule or as otherwise needed. ODOT will send STIP amendments to the applicable federal agency - Federal Highway Administration (FHWA) or Federal Transit Administration (FTA) - for review and approval. Once federal approval is received, the amendment will be incorporated into Ohio's STIP.

Ohio STIP Revisions Guidelines

- a. **Amendments in MPO Regions:** Inside MPO Regions, ODOT on behalf of the Governor will review and approve MPO TIP revisions for inclusion in the next STIP amendment.
- b. **Amendments Outside MPO Regions:** Outside MPO Regions, ODOT will process STIP amendments for major project changes in coordination with applicable RTPPO agencies.

2. Administrative Modification

A STIP administrative modification is a minor revision that does not require federal review and approval, public review and comment, redemonstration of fiscal constraint, or conformity determination. Administrative modifications include:

Highway (FHWA Projects)

- **Revision to projects in STIP group(s)** – e.g. group project added/removed, funding changed, scope revision, etc.
- **Phase funding revision within threshold** (see [Figure 1](#)) – e.g. \$50,000 phase estimate revised to \$1.55M; etc.
- **Revision to STIP Fund Type or SFY within STIP period** – e.g. Preservation to Safety; State to Safety; funds moved out a year but are still within 4-year STIP period etc.;
- **Minor termini, scope, design, description, project name change** (does not add/remove transportation feature) – e.g. minor revision to log points; etc.
- **Sponsoring Agency revision**– e.g. Local Agency to ODOT District, etc.
- **Combining/Splitting of project/phase** – e.g. combine project/phase with another project/phase; split one project into two or more projects, etc.
- **All other minor changes to projects, groups, and/or STIP document** – e.g. clerical/bookkeeping errors or updates, etc.
- **Project/phase carried forward** – unobligated projects/phases included in STIP carried forward as part of next full STIP update

Transit (FTA Projects)

- **Revision to projects in STIP group(s)** – e.g. group project added/removed, funding changed, scope revision, etc.
- **Project funding revision within threshold** (See [Figure 1](#)) – e.g. PID estimate total from \$1M to \$1.3M, etc.
- **Revision to STIP Fund Type or SFY within STIP period** – e.g. 5310 to 5307, 5307 to local, funds moved out a year but are still within current 4-year STIP period, etc.
- **Addition/removal/revision of Activity Line Items (ALI)** – e.g. ALI 11.12.01 revised to 11.13.03, etc.
- **Quantity revision** – e.g. 8 buses to 10, etc.;
- **Minor revision to project name or description** - (no scope added or removed)
- **All other minor changes to projects, groups, and/or STIP document** – e.g. clerical/bookkeeping errors or updates, etc.
- **Project/phase carried forward** – unobligated projects/phases included in STIP carried forward as part of next full STIP update

Administrative Modification Procedures

ODOT will revise the STIP by administrative modification in coordination with MPOs and RTPPOs on an established monthly schedule or as otherwise needed.

- a. **Administrative Modifications in MPO Regions:** Inside MPO Regions, ODOT will process STIP administrative modifications for minor changes in coordination with the MPOs.
- b. **Administrative Modifications Outside MPO Regions:** Outside MPO Regions, ODOT will process STIP administrative modifications for minor changes in coordination with applicable RTPPOs.

Ohio STIP Revisions Guidelines

Figure 1: Threshold Table

Highway

STIP Estimate *(Phase or Group)	Amendment Needed If Estimate Changes More Than:
\$1 to \$3M	\$1.5M
\$3 to \$5M	50%
\$5M to \$10M	30%
\$10M and above	20%

Transit

STIP Estimate (Project or Group)	Amendment Needed If Estimate Changes More Than:
\$1 to \$600,000	\$300,000
\$600,000 to \$1M	50%
\$1M to \$5M	30%
\$5M and above	20%

*Phases are identified as PE Environmental (ENV), PE Detailed Design (DD), Right of Way (RW), Construction (CO), Other (OTH), SPR Planning (SP), SPR Research (SR), and Transit (TRN).

Dispute Resolution

If a question arises on the interpretation of the definition of an amendment or administrative modification, ODOT, the MPO, FHWA, and/or FTA (the parties) will consult with each other to resolve the question. If after consultation, the parties disagree on the definition of what constitutes an amendment or administrative modification, the final decision rests with the FHWA for highway projects and the FTA for transit projects.

Approved by ODOT, FHWA, and FTA

AKRON METROPOLITAN AREA TRANSPORTATION STUDY

MEMORANDUM

TO: Policy Committee
Technical Advisory Committee
Citizens Involvement Committee

FROM: AMATS Staff

RE: Resolution 2025-06 - Adopting Transportation Outlook 2050 – The AMATS Regional Transportation Plan

DATE: May 1, 2025

Transportation Outlook 2050 is the area's Regional Transportation Plan and identifies transportation policy and project recommendations, including long-term highway, transit, bike and pedestrian recommendations. In order for transportation projects in the greater Akron area to receive federal funds they must be consistent with *Transportation Outlook 2050*.

Attached to this memorandum are the list of recommended highway, transit, bicycle and pedestrian improvements. *Transportation Outlook 2050* recommends nearly \$9.4 billion in highway, transit, bicycle and pedestrian infrastructure investments through the year 2050. The Plan has been developed in keeping with the AMATS Public Participation Plan, and federal requirements pertaining to financial constraint and air quality conformity.

AMATS has developed a number of goals and objectives for carrying out the regional transportation planning process. These goals and objectives have been reviewed by the AMATS Policy Committee, Technical Advisory Committee and Citizen Involvement Committee. These goals and objectives were used to guide the development of *Transportation Outlook 2050* and its project recommendations.

These goals are to:

- Maintain the existing transportation system
- Maintain a safe, secure, efficient and integrated transportation system
- Integrate all modes of the transportation system where appropriate
- Increase mobility for all persons
- Support the economic vitality of the region
- Encourage smart regional land use strategies and development patterns

Transportation Outlook 2050 must be fiscally constrained. AMATS must forecast revenues available for projects and forecast project costs to demonstrate that the recommended projects can be implemented over the life of the plan. Most of AMATS projected revenues will be used

for maintaining the existing system. *Appendix B – AMATS Financial Plan* demonstrates financial constraint.

Transportation Outlook 2050 must also demonstrate air quality conformity. The Air Quality Conformity Analysis forecasts the mobile emissions generated by vehicles of project recommendations. The analysis is required to forecast emissions relating to ozone and PM_{2.5} pollutants. The results of the analysis demonstrate that the emissions of ozone and PM_{2.5} do not exceed the level of emissions established by the Ohio EPA in the State Implementation Plan (SIP). Further detail can be found in *Appendix A – Air Quality Conformity Analysis*.

The public was given the opportunity to review and comment on the draft of *Transportation Outlook 2050* during the public comment period from March 11 to April 11. AMATS promoted the public comment period using traditional methods as well as social media.

In addition, public meetings were held on April 2 and April 3, and the CIC discussed the draft Plan on March 20. A press release, written notices, video, newspaper advertisements and social media were utilized to notify the public of the *Transportation Outlook 2050* public involvement period and meetings. *Appendix E – Public Involvement* documents the public involvement process.

Staff Recommendation

The complete document with all finalized content for *Transportation Outlook 2050* will be posted on the AMATS website at <https://www.amatsplanning.org/transportation-outlook>. In early-mid May, the final TO2050 document will undergo a more extensive design process with additional photos added in.

Attached to this memorandum is Resolution Number 2025-06, adopting *Transportation Outlook 2050*, the area's Regional Transportation Plan. The Staff is requesting approval of this resolution.

RESOLUTION NUMBER 2025-06

**OF THE METROPOLITAN TRANSPORTATION POLICY COMMITTEE
OF THE AKRON METROPOLITAN AREA TRANSPORTATION STUDY**

**ADOPTING TRANSPORTATION OUTLOOK 2050 – THE AMATS REGIONAL
TRANSPORTATION PLAN**

WHEREAS, the Akron Metropolitan Area Transportation Study (AMATS) is designated as the Metropolitan Planning Organization (MPO) by the Governor, acting through the Ohio Department of Transportation and in cooperation with locally elected officials for Summit and Portage Counties and the Chippewa and Milton Township areas of Wayne County; and

WHEREAS, the Congress of the United States, through law (23 USC § 134 and 49 USC § 5303)) has required that an MPO must develop a long-range transportation plan (LRTP); and

WHEREAS, this Committee has reviewed the Transportation Outlook 2050 document and found that the recommendations contained therein function together to form an integrated metropolitan transportation system, take into account the planning considerations of the Infrastructure Investment and Jobs Act (IIJA) (Pub. L. No. 117-58), and are consistent with regional transportation goals and objectives; and

WHEREAS, a financial plan has been prepared and included in the document which demonstrates that Transportation Outlook 2050 can be implemented in a fiscally sound manner, in accordance with the financial resources from public and private sources that can be reasonably expected to be made available between now and 2050; and

WHEREAS, Transportation Outlook 2050 assesses capital investment and other measures necessary to ensure the preservation of the existing metropolitan transportation system, and has been found to make the most efficient use of existing transportation facilities to relieve vehicular congestion and maximize the mobility of people and goods; and

WHEREAS, the Clean Air Act Amendments of 1990 require that AMATS make a determination, in cooperation with NOACA, ERPC and ODOT, that Transportation Outlook 2050 is in conformity with respect to Ohio's State Implementation Plan for attainment of the 2008 and 2015 8-hour ozone standards and the 2006 and 2012 fine particulate matter standards; and

WHEREAS, a quantitative air quality analysis of Transportation Outlook 2050 has been completed in accordance with the requirements specified by the IIJA and the Clean Air Act Amendments of 1990; and

RESOLUTION NUMBER 2025-06 (Continued)

WHEREAS, AMATS carried out public involvement activities consistent with AMATS Public Participation Plan, and various public agencies, local officials, private providers of transportation, members of the public, and area media outlets were notified that Transportation Outlook 2050 was available for review and posted on the AMATS web site; and that the public involvement meeting was held to provide the general public with the opportunity to comment on the draft Transportation Outlook 2050; and

WHEREAS, AMATS maintains a regional Intelligent Transportation Systems (ITS) architecture; a regionally developed framework that ensures institutional agreement, technical integration, and functional interoperability among the ITS projects that are planned, programmed, and implemented in Summit County, Portage County, and the Chippewa and Milton Township areas of Wayne County.

NOW THEREFORE BE IT RESOLVED:

1. That this Committee adopts Transportation Outlook 2050 as the long-range transportation plan for the AMATS area and affirms its consistency with the State Implementation Plan.
2. That this Committee recommends that its members incorporate these improvements into their respective transportation plans and pursue the funding necessary for project implementation.
3. That this Committee approves the Transportation Outlook 2050 document.
4. That this Committee considers that the process used to develop the regional transportation plan has adequately provided for participation by local officials and members of the general public.
5. That this Committee affirms that the recommendations included in Transportation Outlook 2050 are able to be implemented within the constraints established by the financial forecast contained in the Plan document.
6. That this Committee authorizes the Staff to provide copies of this Resolution to the appropriate agencies as evidence of action by the Metropolitan Planning Organization.

Larry D. Jenkins, Jr., P.E., P.S., 2025 Chairman
Metropolitan Transportation Policy Committee

Section 1 | Introduction

The Akron Metropolitan Area Transportation Study (AMATS) is excited to present this latest update to the Greater Akron area's metropolitan transportation plan. *Transportation Outlook 2050 (TO2050)* is the official plan detailing how Greater Akron's transportation network will be managed, operated, and improved.

About Metropolitan Planning Organizations

Metropolitan Planning Organizations (MPOs) are agencies created from the 1962 Federal Aid Highway Act to provide local elected officials input into the planning and implementation of federal transportation funds to metropolitan areas with populations of greater than 50,000. MPOs must plan for regional transportation planning expenditures and are responsible for the 3C (continuing, cooperative, and comprehensive) transportation planning process for their urbanized area. Just over 400 MPOs exist across the United States, and 17 exist within Ohio.

MPOs are responsible for prioritizing transportation improvements and allocating federal funds toward projects. Funds are allocated through the Transportation Improvement Program (TIP), but before that occurs, projects must be consistent with an MPO's Metropolitan Transportation Plan (MTP), also known as a Long-Range Transportation Plan.

AMATS' Role in Transportation

AMATS is the designated MPO for the Greater Akron area, covering all of Portage and Summit Counties and the northeastern portion of Wayne County (as shown on Map 1-1).

AMATS serves as a regional forum for discussion and cooperation between elected officials, the public, planners and engineers. The agency coordinates with these stakeholders to set transportation policies and implement various improvements and to ensure that federal transportation funds are used in an efficient, effective and equitable manner.

AMATS has three committees that oversee the work of the AMATS staff who are responsible for carrying out the technical work of the agency:

- The AMATS Policy Committee is responsible for directing the transportation planning process. The committee is responsible for policy and funding decisions and is comprised of elected representatives from municipalities, counties, two regional transit authorities, and the Ohio Department of Transportation (ODOT).
- The Technical Advisory Committee is composed of planners and engineers who are charged with assisting the Policy Committee in the planning process. The committee reviews Policy Committee materials and provides comments to the staff.
- The AMATS Citizens Involvement Committee (CIC) is the forum that gives the public voice regarding transportation issues and concerns. The CIC relays public comments regarding transportation issues to the Policy Committee for their consideration.

Together, the committees and staff comprising AMATS are responsible for developing the MTP, the TIP and various other reports and recommendations.

AMATS' role in transportation planning focuses on the following responsibilities:

- Monitor the conditions of the existing transportation network
- Identify existing capacity or safety problems through detailed planning studies to develop transportation improvements
- Forecast future population and employment growth for the region
- Develop alternative growth scenarios to evaluate the impacts that land use and transportation choices made today will have on the region's future.
- Help plan road and bridge repairs, bicycle and pedestrian facilities, and public transportation investments that will move goods and people safely and efficiently throughout the region.
- Estimate the impact that an expanding transportation system will have on air quality. Develop a financial plan that identifies the costs and revenues associated with the continued operation and maintenance, and future expansion of the region's transportation system.
- Work with the public and various stakeholders to determine the region's priorities for improving the transportation system with anticipated revenue

Creating a Metropolitan Transportation Plan (MTP)

Federal Law requires Metropolitan Planning Organizations (MPOs) to create an MTP—sometimes called a Long-Range Transportation Plan (LRTP)—that documents current and future transportation demand and identifies long term improvements and projects to meet those needs. Federal law allows significant latitude in how an MTP is crafted; however, there are several core requirements of an MTP:

- address no less than a 20-year planning horizon
- provide for the development of an integrated multimodal transportation system that considers various modes of transportation
- be reviewed and updated at least every four years (five years for some areas)
- be fiscally constrained, meaning that project revenues must fit within the precited funding to be received within the region
- consider federal planning factors
- provide an opportunity for public participation

TO2050—AMATS' MTP

TO2050 recommends that nearly \$9.4 billion be invested in area highway, public transit, and active transportation networks over the next 25 years with nearly \$6.9 billion for the region's highways and slightly less

TRANSPORTATION OUTLOOK 2050

than \$2.5 billion for public transit systems. The plan urges another \$35 million in active transportation investments over the same period.

The plan presents 47 specific highway project recommendations that include various roundabouts, intersection improvements, and corridor rehabilitations. *TO2050* presents 24 active transportation project recommendations including trails and additional pedestrian-related facilities across the area. The plan's public transit recommendations urge that service be considered an integral land use planning component and that future investments preserve the existing transit network, assets, and supporting facilities.

TRANSPORTATION OUTLOOK 2050

Map 1-1 | AMATS Service Area

Section 2 | Planning Process

Transportation Outlook 2050 was developed through a robust planning process informed by federal guidance, state input and local outreach. As part of the planning process, AMATS develops a set of goals and objectives to lay a foundation for Transportation Outlook 2050. The goals were developed with consideration to the federal planning factors and reviewed by the AMATS Citizen Involvement Committee, Technical Advisory Committee and approved by the Policy Committee in March of 2025.

2050 Goals and Objectives

Maintain the existing transportation system

- Give priority to resurfacing, restoration, and rehabilitation, improvements in the development of regional transportation plans and programs
- Give priority to transit vehicle replacements, preventive maintenance, and facility rehabilitations in the development of regional transportation plans and programs

Maintain a safe, secure, efficient and integrated transportation system

- Minimize highway accidents and provide safe travel routes
- Minimize pedestrian, bicycle, train, and vehicle conflicts
- Improve the safety of transit facilities and operations
- Improve the security of the transportation system
- Minimize traffic congestion

Integrate all modes of the transportation system where appropriate

- Encourage service coordination among METRO, PARTA, and the neighboring transit operators
- Encourage system operating efficiencies through the development of projects that provide direct connections between modes
- Encourage the development of a balanced, integrated, multimodal transportation system that includes highways, transit, bikeways, pedestrian, rail, and air facilities

Federal Planning Factors

1. Support the economic vitality of the metropolitan area, especially by enabling global competitiveness, productivity, and efficiency
2. Increase the safety of the transportation system for motorized and non-motorized users
3. Increase the security of the transportation system for motorized and non-motorized users
4. Increase accessibility and mobility of people and freight
5. Protect and enhance the environment, promote energy conservation, improve the quality of life, and promote consistency between transportation improvements and State and local planned growth and economic development patterns
6. Enhance the integration and connectivity of the transportation system, across and between modes, for people and freight
7. Promote efficient system management and operation
8. Emphasize the preservation of the existing transportation system
9. Improve the resiliency and reliability of the transportation system and reduce or mitigate stormwater impacts of surface transportation
10. Enhance travel and tourism.

Increase mobility for all persons

- Encourage a public transit system that provides basic mobility for transit dependent persons and provides an alternative to automobile usage
- Encourage the development of a regional network of bicycle routes
- Encourage the placement of sidewalks and other pedestrian facilities where they are appropriate
- Implement complete streets principles

The transportation system should support the economic vitality of the region

- Develop a transportation system that will provide superior mobility for the movement of freight and goods
- Encourage the implementation of transportation improvements that will promote sound economic growth

Encourage proven regional land use strategies and development patterns

- Coordinate the development of transportation facilities and land use
- Minimize the adverse effects of transportation facilities on land use, in order to protect and preserve neighborhoods and communities
- Minimize the adverse effects of land use changes on the transportation system
- Transportation and land use infrastructure should consider adverse environmental impacts

These goals and objectives inform AMATS policy and project recommendations in Transportation Outlook 2050. They also inform AMATS planning work during the four-year planning period that culminates in Transportation Outlook 2050.

AMATS planning processes are summarized, by transportation issue, through a series of Needs Reports (sometimes called Input Documents). During the planning process, AMATS develops reports on roadway preservation, safety, transit, active transportation, freight and congestion. These reports aid in the identification of policies and programs that are recommended in Transportation Outlook 2050. For example, the Preservation Needs Report documents the region's preservation needs at \$6.86 billion through the life of the plan. These costs inform AMATS policy recommendation to "fix it first" in Transportation Outlook 2050. Section 4 of Transportation Outlook will explore in more detail the Needs Reports and their relationship to project recommendations.

Outreach Process

Overview

The ability for the public to engage in the transportation planning process is of paramount importance. AMATS has developed a robust public engagement approach with the intent to reach as many of the region's residents as possible. The staff uses both traditional and non-traditional methods to increase public participation in the planning process.

Since the previous Plan (TO2045) was completed in 2021, AMATS has continued to employ many of its proven public participation strategies but has built upon this foundation by launching new initiatives and improving the ways in which AMATS informs the public and obtains valuable public feedback. Together, these strategies and initiatives are used by the agency to encourage members of the public to become active and informed participants within Greater Akron's regional transportation planning process.

Ongoing Efforts to Collaborate and Inform

AMATS' Public Participation Processes

AMATS utilizes various strategies to engage and empower the public throughout the regional transportation planning process. These are outlined within AMATS' Public Participation Plan, also commonly referred to as its "3P." The 3P is updated during the planning cycle to ensure that the agency's methods are up-to-date, relevant, and innovative. The 3P was last updated in 2024. Recent iterations of the 3P recognize the changing demographic composition of the Greater Akron area and define how the agency will communicate with these populations.

The AMATS 3P was crafted based upon the following guiding principles:

- AMATS recognizes that every major public policy decision or implemented transportation project significantly affects someone.
- If the agency's decision-making process is open, objective and considers all viewpoints, then policies, programs and projects are usually much more willingly accepted and embraced by affected communities.
- By utilizing a variety of public outreach techniques in multiple formats to provide planning information, the agency will gain a wide audience and solicit input from a greater number of people.
- Coordination and collaboration among as many as transportation stakeholders as possible during the planning process produces the most effective and balanced transportation solutions.

To view the AMATS 3P, visit <https://www.amatsplanning.org/sites/default/files/docs/DRAFT-3P-Public-Participation-Plan-2022-Update.pdf>

Website and Social Media

In 2024, AMATS launched a new website, designed to be more intuitive and user-friendly. AMATS actively maintains the website to ensure that information is kept up to date. Features of the site include:

- News items, including the release of new reports and important processes are posted onto the website in places where they can be easily seen.
- An interactive Transportation Improvement Program (TIP) project listing, which provides details about AMATS-funded projects and includes map images of TIP project locations.
- Visitors can identify dates and times for upcoming Policy Committee, Technical Advisory Committee (TAC), and Citizens Involvement Committee (CIC) meetings. Visitors can also view the most recent committee meeting packet, listen to an MP3 meeting podcast, or review past meeting minutes.

- All reports and web maps developed by AMATS are easily accessible and can be refined by category (e.g. safety, pedestrian) or keyword.

AMATS also maintains an active presence on social media.

- **X:** @AMATSPanning
- **YouTube:** @AMATSPanning

Preparation of Needs Reports/Input Documents

Prior to the development of TO2050, AMATS prepares various reports that help inform the Plan's development. At a minimum, each of these reports is presented to all three AMATS Committees, and approved by the AMATS Policy Committee. Many of these reports undergo additional steps including public surveys, additional presentations, press releases. Input Documents include:

- Planning Data Forecast
- Freight Plan
- Active Transportation Plan
- Transit Plan
- Highway Preservation Needs Report
- Congestion Management Processes Report
- Annual Crash Report
- SS4A Action Plan

Surveys

During the development of the *Safe Streets for All Action Plan* and the *Active Transportation Plan*, AMATS utilized ARC GIS's Survey123 platform to develop web-based surveys. A key feature of both surveys was the ability to provide location-specific comments. Both surveys yielded high response rates and provided valuable feedback that helped inform planning processes. Comments were brought to the consideration of relevant decisionmakers as well.

Connecting Communities Process

AMATS developed Connecting Communities - A Guide to Integrating Land Use and Transportation as a way to better understand the relationship between land use and transportation. The program encourages the pursuit of transportation projects which support vibrant, healthy and inclusive places by communities and project sponsors. The purpose of the Connecting Communities Planning Grant Program is to include connectivity principles during the development of transportation plans that will lead to projects eligible for AMATS funds. The program focuses on integrating the following principles:

Connecting Communities principles:

- Increase alternative transportation options to connect people and places.
- Promote Complete Street principles to create vibrant and safe places for all users.
- Leverage transportation projects to develop places which support alternative transportation and complete streets through land use and design.

Since its launch in 2010, the Connecting Communities Planning Grant Program initiative has funded 15 connectivity studies throughout the Greater Akron area. Various recommendations from these studies have been implemented, representing several million dollars of investment into the connectivity of places.

Community Events

AMATS staff looks forward to organizing and attending events within the community, as this provides an opportunity to interact with citizens in environments outside of a public meeting. Since 2021, AMATS has participated in several events, including but not limited to:

Bike-n-Brainstorm Events — AMATS developed the Bike-N-Brainstorm concept in 2012 to serve as a tool for public outreach by engaging cyclists in a chosen bike route for the purpose of improving biking conditions in a local community. In a Bike-N-Brainstorm, participants meet for a ride along a designated route in a community. At the end of the ride, cyclists share their thoughts on how to make a community more bike and pedestrian friendly.

Approximately 85 cyclists have participated in five Bike-N-Brainstorm events between 2021 and 2025. AMATS continues to partner with other communities in encouraging the development of bicycle infrastructure to make cycling a viable and safe active transportation option.

Bicycle Community Events — AMATS attended and/or provided handouts to various community events promoting bicycle safety around the region. Most of these events have been geared toward children and youth. These events are can be a good opportunity to directly be involved in cycling safety through activities and conversations. They also allow AMATS to hand out bicycle LED lights, bicycle bells, AMATS bike maps, water bottles, and various other AMATS branded giveaways.

Project Walking Tours — AMATS periodically attends community walking tours or ribbon cuttings upon the completion of major projects. In 2021, AMATS attended a walking tours of the Cleveland-Massillon Road corridor improvement project and Aurora's citywide traffic signal improvement project. In 2024, AMATS attended the opening ceremony for the first phase of the Rubber City Heritage Trail.

Jane's Walk — Jane's Walk is a global walking initiative held annually on the first weekend in May. The initiative began in Toronto in 2007 to honor the legacy and ideas of urban planner and writer, Jane Jacobs. Every year, cities around the world participate in the Jane's Walk festival of free walking tours that get people to explore their cities, tell stories about their neighborhood and connect with neighbors.

Because AMATS promotes connectivity principles in transportation planning, the agency relies on these events as a planning resource. AMATS most recently participated in several Jane's Walk events in 2022 around the City of Akron.

Creating a Plan with Public Insight

In addition to the perpetual public and stakeholder engagement described above, TO2050's process necessitates its own series of specific outreach. This process is described below.

Meetings with Communities and Agencies

In the fall of 2024, AMATS began meeting with its members who represent communities, county engineering offices, park districts and transit agencies. The point of these meetings was to touch-base with AMATS members and to hear about their transportation issues, needs, goals, and projects they have in mind.

Each meeting was intentionally informal in order to allow for flexibility on areas of focus and the order in which the conversations flowed. However, a general set of questions was developed based upon TO2050's goals:

Goal 1: Maintain the existing transportation system

- Do you have any large or expensive maintenance concerns in your jurisdiction (bridges needing to be replaced, major road overhauls)?

Goal 2: Maintain a safe, secure, efficient and integrated transportation system

- Do you have specific safety concerns within your jurisdiction, either high-crash areas or places with potential safety concerns? Do you have any ideas of how to improve these locations?
- Do you have any areas of congestion? If so, where are they and do you have strategies in mind of how to deal with these areas?

Goal 3: Integrate all modes of the transportation system where appropriate

Goal 4: Increase mobility for all persons

- Do you have any transit-related concerns within your jurisdiction? Areas where service is inadequate, where better facilities (such as bus shelters) are needed, etc.
- Are there areas not accessible for pedestrians or bicyclists that should be?
- What are some of the highest priority areas you would like people to walk or bike?
- Are there any plans in the works to build new or improved trails or sidewalks?
- How important is it, compared to other pressing needs, to make your jurisdiction more friendly to non-automotive transportation?

Goal 5: Support the economic vitality of the region

- Are there any freight choke points within your jurisdiction?
- Are there any areas you foresee improved economic development (either commercial or industrial), and are there any plans in the works to improve transportation networks within these areas?

Goal 6: Encourage smart regional land use strategies and development patterns

- Are you seeing or do you foresee any adverse environmental impacts that relate to the transportation system, e.g. stormwater issues, sprawl, air quality concerns?

- What, if anything, is your jurisdiction doing to promote smarter land use strategies and improved development patterns?

General Questions:

- Do you have any specific projects in the works? How, when, and why do you intend to pursue them? What negative issues, if any, do you foresee as these projects are planned, e.g. public controversy, community character changing, etc.
- What plans (if any) do you have that AMATS should be familiar with?
- Do you have any questions about AMATS funding programs and funding policies?

Some meetings followed this framework rather closely while others had a much more organic, conversational flow. In all cases, the conversations that occurred allowed staff to understand what was most important to each community and agency.

Reporting on Progress

AMATS kept each of its committees, including the Citizens Involvement Committee, apprised of TO2050s progress at each scheduled meeting during the Plan's development. A Draft version of TO2050 was approved by the AMATS Technical Advisory and Policy Committees in March 2025, while the final Plan was approved in May.

Public Involvement Period

A 30-day public involvement (PI) period began on March 11, 2025. To help broadcast the draft plan's completion, AMATS staff developed newspaper advertisements, wrote press releases, posted content on its social media accounts, and created new web content on its website. AMATS communicated that public comments on the draft TO2050 plan could be provided in various ways:

By attending Meetings:

- March 20, 2025 Citizens Involvement Committee meeting
- Public Open House Meetings on April 2 (Akron) and April 3 (Kent)

Providing written or verbal comments:

- An online comment form, hosted on www.amatsplanning.org, was developed as an easy way to provide comments. The public could also call the AMATS office, email AMATS staff, or stop by the AMATS offices during regular business hours.

More information about the public comment period can be found in Appendix E.

Section 3 | Existing Conditions and Future Directions

It's critical of any long-range transportation plan to analyze existing trends and conditions. This analysis is used to develop strategies and policies for the future that create a stronger transportation system.

The region, like any other metropolitan area, encompasses a diverse array of communities with varying density, land uses, and numerous other physical and human geographical traits. The region's population trend mirrors that of current Midwestern "rust belt" cities with an industrial history, showing a declining population in a large centralized downtown city. Surrounding cities either shrink or remain stable and most growth occurs within the suburban areas further from the city center.

Using Census data from 2020, the City of Akron is Ohio's fifth largest city, containing a population of 190,469. The city's population peaked in 1960 at 290,351, subsequently declining in population as deindustrialization and suburbanization negatively affected most midwestern population centers. Although Akron has lost about one-third of its population since its peak, surrounding Summit County has grown modestly during this same period: 513,569 to 540,428 (1960 to 2020). However, Summit County is down slightly from its peak population (1970) of 553,371.

Portage County grew much more rapidly during the last half of the twentieth century and, in fact, may have hit its population peak in 2020. For comparison, Portage County had a population of 91,798 in 1960 compared to a 2020 population of 161,791. Although it is still growing, the 2020 Census indicates that this growth appears to have leveled off; the county only grew 0.2% between 2010 and 2020.

Socioeconomic Variables

One of the most fundamental steps in the long-range transportation planning process is the collection, organization and analysis of existing planning-related data. Using this data, AMATS can determine where the region has been (from a social-economic standpoint), the current conditions, and perhaps most critical to any planning effort, in what direction the region is heading.

Although the most used data (ex. population or employment data) are gathered and analyzed on an ongoing basis, a greatly expanded effort is undertaken in preparation for each upcoming long-range transportation plan. The AMATS 2050 Planning Data Forecast was completed in 2024 as a necessary precursor to *Transportation Outlook 2050*.

The Planning Data Forecast analyzed socio economic variables in the base year of 2020 and the planning period year of 2050. The 2020 data generally came from either the most recent U.S. census or from American Community Survey (ACS). Using forecasting methodology, described in the Planning Data Forecast document, this 2020 data is projected out to the plan year of 2050. The AMATS 2050 Planning Data Forecast projects a number of variables, each of which has a direct impact on local traffic and is therefore required for input into the regional travel demand model.

Population (2 Scenarios)

The AMATS Planning Data forecast developed two planning scenarios for population change in 2050. The Ohio Department of Development Scenario is based on aligning the 2050 population totals with the Ohio Department of Development's (ODOD) county-level population forecasts for Ohio. This scenario is based on the Ohio Department of Development methodology that looks at births, death, in migration and outmigration. The Current Trends Scenario is based on analyzing population trends over the last 20 years to extrapolate future population projections.

Table 3-1 Reflects the differences between the two scenarios for key variables from the Planning Data Forecast. While the ODOD's scenario does appear bleaker from a population perspective, the Current Trends scenario paints only a slightly better picture. Greater Akron is not expected to see much population growth, except in very localized areas. Some areas can also expect to see population decline.

The ramification of either of the two scenarios leads to similar policy outcomes. AMATS must continue to focus on preserving the region's existing system and use that system to improve citizen quality of life with investments that improve safety and pedestrian and bicycle infrastructure. It also emphasizes the fact that traffic is not expected to grow regionwide. Traffic is not expected to continually increase through the life of the plan. In fact, the region should anticipate some reductions in traffic.

Table 3-1 Population Forecast						
	ODOD Scenario			Current Trends Scenario		
	Base Year 2020	Base Year 2050	% Change	Base Year 2020	Base Year 2050	% Change
Population	720,087	612,750	-14.9%	720,087	722,064	0.3%
Households	304,094	274,482	-9.7%	304,094	322,855	6.2%
Population Under 18	146,339	124,664	-14.8%	146,339	146,584	0.2%
Vehicles	538,456	486,949	-9.6%	538,456	571,355	6.1%
Workers	356,805	303,822	-14.8%	356,805	357,941	0.3%

Map 3-1 | 2050 Population Change (Current Trends Scenario)

Source: AMATS (Akron Metropolitan Area Transportation Study), ODOT (Ohio Department of Transportation)

Employment

While population is anticipated to decline, greater Akron's employment is anticipated to increase. Employment industries expected to grow the most between now and 2050 are transportation and warehousing, health care, and arts, entertainment and recreation. Some declining industries identified included manufacturing, retail trade, and utilities. Overall, the region's employment is expected to grow by 16.4 percent. This growth in employment combined with the reduction in the region's population would mean that it is likely that employees are coming from outside greater Akron to satisfy the region's employment needs. It could also point to increase in the number of jobs that are filled with remote workers. Table 3-2 details employment growth in all employment trades.

Sector Code	Base Year 2020	Base Year 2050	% Change	Sector Description
NAICS 11	440	495	12.5%	Agriculture, Forestry, and Hunting
NAICS 21	373	487	30.6%	Mining
NAICS 22	1,582	1,241	-21.6%	Utilities
NAICS 23	13,191	14,885	12.8%	Construction
NAICS 31-33	39,470	39,103	-0.9%	Manufacturing – Aggregated
NAICS 42	15,468	15,792	2.1%	Wholesale Trade
NAICS 44-45	34,812	31,342	-10.0%	Retail Trade – Aggregated
NAICS 48-49	14,370	19,364	34.8%	Transportation and Warehousing – Aggregated
NAICS 51	5,221	5,260	0.7%	Information
NAICS 52	10,448	10,695	2.4%	Finance and Insurance
NAICS 53	3,327	3,505	5.4%	Real Estate and Rental and Leasing
NAICS 54	15,107	18,123	20.0%	Professional Scientific and Technical Services
NAICS 55	14,242	16,618	16.7%	Management of Companies and Enterprises
NAICS 56	15,966	18,287	14.5%	Administrative Support, Waste Management and Remediation
NAICS 61	27,086	31,911	17.8%	Education Services
NAICS 62	53,036	69,812	31.6%	Health Care and Social Assistance
NAICS 71	5,459	9,722	78.1%	Arts, Entertainment, and Recreation
NAICS 72	28,620	42,056	46.9%	Accommodation and Food Services
NAICS 81	9,592	11,050	15.2%	Other Services (except Public Administration)
NAICS 92	9,245	9,170	-0.8%	Public Administration
NAICS 99	12	12	0.0%	Other
Total Employment	317,067	368,930	16.4%	

Map 3-2 | 2050 Employment Change

Emerging Trends

As the region has recovered from the COVID-19 Pandemic that began in 2020 it is not difficult to identify some of the ways things have changed. Online retail continues to dominate the marketplace, remote work continues in many employment sectors, and downtowns are transitioning from being hubs of business to hubs of residential and retail activity.

These trends impact the transportation system in several unique ways. Freight traffic, for example, is up throughout the state. The Ohio Department of Transportation's (ODOT) Statewide Freight Plan published in 2022, projects an increase in truck freight tonnage of 34 percent. As more trucks use the transportation system, it is likely that roadway preservation will be critical to ensure pavement conditions are maintained.

The region's job hubs are also impacted. Large distribution facilities tend to locate near highways, but outside the traditional city center. How can the region ensure employees are able to access employment centers? Because convenient and reliable local transit is critical to making sure the region's residents can get to good paying jobs, it is essential to locate employment centers in locations that are accessible.

As downtowns transition to centers of residential activity, the transportation needs also change. Residents that choose to live in a downtown want safe walkways and bikeways. They are choosing the convenience of being close to activities versus needing to rely on an automobile. Understanding this trend helps identify what types of projects are better suited to the future downtowns.

Another emerging trend is electric powered vehicles which include battery-electric and plug-in hybrid vehicles. These vehicles have become more popular in the United States within the past 5 years, although not as quickly as other nations that have been more proactive in developing the proper infrastructure needed to accommodate electric powered vehicles.

Share of Electric and Hybrid Cars Sold From 2013-2023

Electric powered vehicles pose some challenges to the region as the need for quick fast charging infrastructure is a barrier to help make electric powered vehicles more attractive to the daily user and to assist electric vehicles traveling through this region via the freeway. Some of the examples of different level of charging are explained below but are in no way an example of all types of charging technology found throughout the U.S. The difference between Level 1 and Direct Current Fast Charging (DCFC) capacity is significant.

- **Level 1** equipment provides charging through a common residential 120-volt (120V) AC outlet. Level 1 chargers can take 40-50+ hours to charge a Battery-Electric Vehicle (BEV) to 80 percent from empty and 5-6 hours for a Plug-In Hybrid Vehicle (PHEV).
- **Level 2** equipment offers higher-rate AC charging through 240V (in residential applications) or 208V (in commercial applications) electrical service, and is common for home, workplace, and public charging. Level 2 chargers can charge a BEV to 80 percent from empty in 4-10 hours and a PHEV in 1-2 hours.
- **Direct Current Fast Charging (DCFC)** Direct current fast charging (DCFC) equipment offers rapid charging along heavy-traffic corridors at installed stations. DCFC equipment can charge a BEV to 80 percent in just 20 minutes to 1 hour. Most PHEVs currently on the market do not work with fast chargers.

**Source D.O.T. website. -Rural EV Toolkit*

The need for widely available fast charging equipment is a major issue when understanding the need to integrate electric vehicles into U.S. metropolitan areas.

Technology Trends

Transportation technology is an area of growing interest and investment. Fully integrated innovative technologies including self-driving cars, connected vehicles, drones, and smart sensors have captivated government, business and citizen interest with optimism that these technologies can improve the transportation network. Many believe that technology being developed today could reduce traffic fatalities, crashes and congestion. It could also help with issues such as parking and transit last mile connections. Further, there are numerous commercial applications that will bolster the economy. The state of Ohio has been active in promoting transportation technology.

Some of these emerging technologies have been applied throughout the state of Ohio in larger urban areas such as Columbus, which received a \$40 million-dollar smart cities grant in 2016 to develop and test these technologies to improve the functionality of the city. Some of the [Smart Columbus](#) projects have included self-driving automated shuttles, connected vehicle environments where, devices called on-board units are installed on public and private vehicles to allow vehicles to "talk" to each other and receive in-car alerts like blind spot detection or rear-end collision warning. Projects that are also geared towards people who have first-mile-last mile challenges are "smart mobility hubs" where shared amenities such as bike racks, electric scooter and bike charging station, EV charging and park and ride transit options bring urban transportation options together in a single location that help people that rely on alternate modes of transportation have been implemented as a program or pilot program to test these scenarios and offer as a guidebook for implantation.

The State of Ohio has been promoting these trends for the past 10 years through [DriveOhio](#), which was an initiative of ODOT, “serving as the state’s hub for smart mobility technology on the ground and in the air.” DriveOhio has supported the study, funding and development of autonomous and connected vehicle technology and implementation and believe this advanced technology will help make the roads safer and more efficient to travel.

Some of the areas of new technology being studied are connected and automated vehicles. Connected and Automated Vehicles (CAVs) combine connected vehicle (CV) and automated vehicle (AV) technologies. CVs use wireless communication to share data with other vehicles and infrastructure, while AVs utilize sensors and Artificial Intelligence to make driving decisions autonomously without human intervention. Connected Vehicles (CVs): Focus on communication and data sharing, allowing vehicles to be aware of their surroundings and potential hazards. The number of connected vehicles is increasing within this region, which will allow for more vehicles to provide data for better regional planning. True fully autonomous vehicles have yet to be fully realized and implemented in this region.

Within the AMATS planning region, some of the technologies being explored and implemented are traffic signal preemption technologies. Traditionally pre-emption technology allows for emergency vehicles priority at main intersections, which has been implemented throughout the region but in most cases involves manual operation using radio signals from a fixed location. Newer signal pre-emption technologies are being explored locally that utilize connected vehicles like public transit buses and city operated vehicles to allow for safe passage through busy intersections. Another method being implemented by cities such as [Hudson](#) is “adaptive signal” technology. This technology utilizes Hudson’s high-speed fiber-optic cable broadband to adjust the timing of traffic lights in real-time to control the flow of traffic and reduce travel times. As this project develops AMATS and the region will have more data to examine how this specific pre-emptive signal project method impacts safety and congestion.

To better understand the current state of all of the region’s traffic signals AMATS has elected to pursue the development of a Regional Traffic Signal Inventory (RTSI) for the entire AMATS planning area that will be used to both inform policy decisions and address policy issues. AMATS is seeking to understand these traffic signal systems/networks and explore what options the region might already have regarding inter-jurisdictional coordination and/or what improvements could be made to help facilitate these efforts. While the timeline of widespread technological adoption is uncertain, the future direction of transportation is at a crossroads where policy and technical guidance play an especially critical role in shaping change. AMATS will continue to monitor the trends in innovation and carefully consider their role in transportation planning in the future.

Summary

In today’s age of technology and instant feedback, some trends arrive quickly but also retreat quickly. Other trends can be just as abrupt but permanent. While it is still impossible to predict the future, the Greater Akron area will be prepared for it by focusing on a transportation system that works for all users and preserves the strong system currently in place.

Section 4 | Regional Transportation System

Like any metropolitan area, the Greater Akron area contains a comprehensive network of roadways, railroad lines, bicycle and walking trails, sidewalks, and airports. This section summarizes the existing regional transportation system by mode:

- Roadways
- Active Transportation
- Public Transit
- Rail
- Aviation

Roadways

Classification and Overview

Roadways within the Greater Akron area are organized into several roadway types. The classification system follows a framework used throughout the United States known as Federal Functional Classification. MPOs, Departments of Transportation, and the Federal Highway Administration collectively work to classify all roadways based on their function and importance. Roadways include low-volume local streets, collector roads, arterial roads, and limited-access freeways—Interstates, other expressways, and tolled-highways (Ohio Turnpike). Some classifications are also broken down into major and minor categories, and rural and urban categories.

A roadway's Federal Functional Classification is important because it dictates whether federal funding can be utilized toward its improvement. Local roadways and Rural Minor Collector roadways are ineligible for federal funding. Eligible funding classifications come with specific design criteria or may be more or less likely to receive AMATS or ODOT funding sources. Table 4-1 and Map 4-1 illustrate the AMATS Planning Area's FFC Network. More information about the Federal Functional Classification can be found at <https://www.fhwa.dot.gov/planning/processes/statewide/related/hwy-functional-classification-2023.pdf>

Map 4-1 | Federal Functional Classification of Roadways

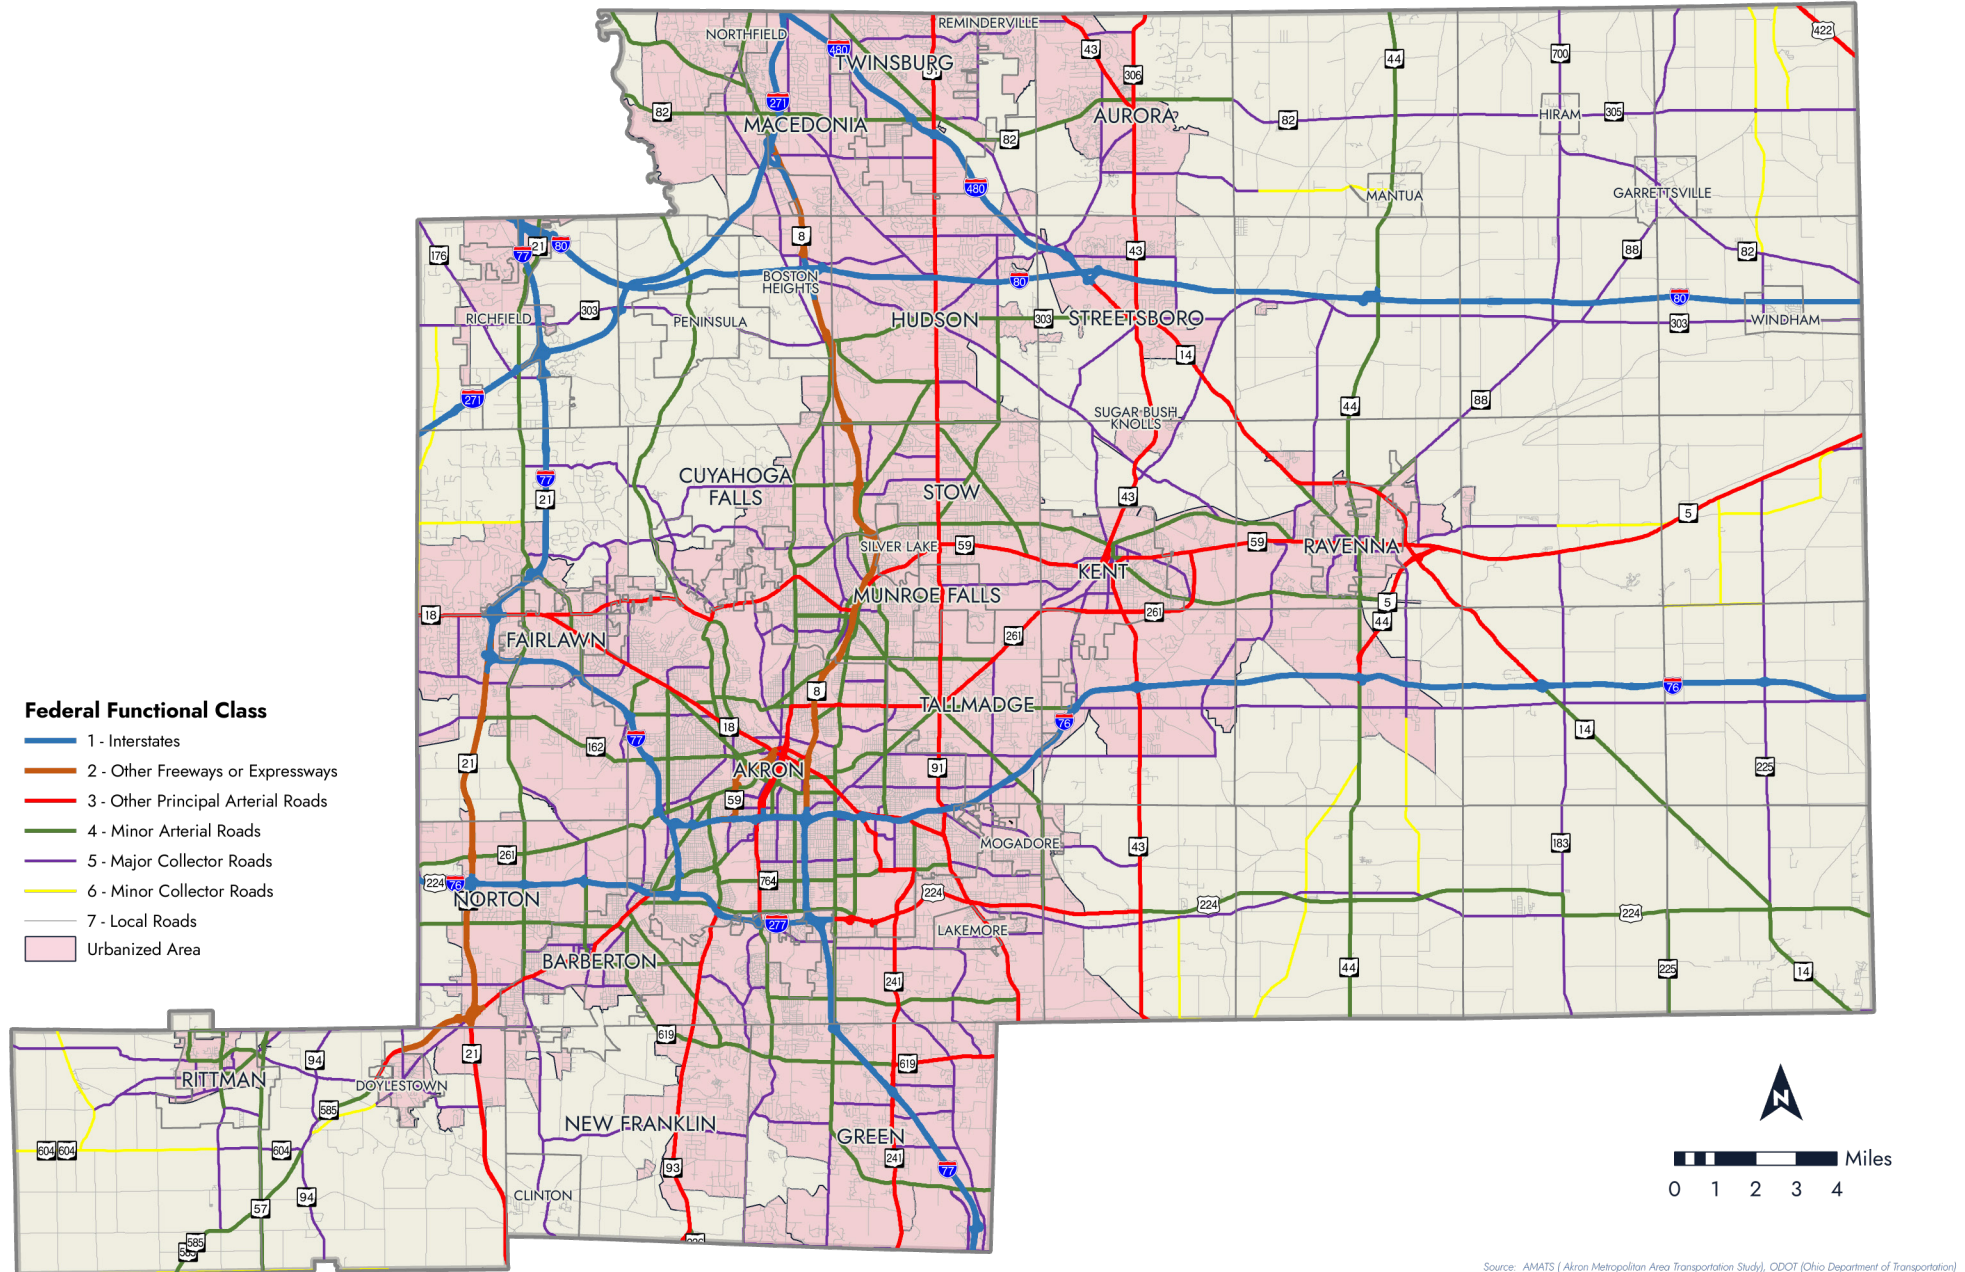

Table 4-1 Federal Functional Classification of AMATS Roadways			
Functional Class	Length (in Miles)	Number of Lane Miles	Lane Mile % of Overall System
Interstate	106	493	4.62%
Expressway	33	164	1.54%
Ohio Turnpike (I-80)	34	204	1.91%
Principal Arterial	194	585	5.48%
Minor Arterial	354	969	9.08%
Major Collector	547	1,165	10.92%
Urban Minor Collector	6	12	0.11%
Rural Minor Collector	71	142	1.33%
Local	3,452	6,935	65.00%
Totals:	4,797	10,669	100.00%

Safety and Security

Safety

Improving the safety of the regional transportation network is among the most important goals of TO2050. A significant portion of AMATS' yearly workload is devoted to analyzing crash data and reporting on safety through two studies: the **Annual Crash Report (ACR)** and the **Safe Streets for All (SS4A) Action Plan**. These studies were used as evaluation criteria for selecting projects for funding and the recommendations of the SS4A Action Plan were incorporated into the development of transportation recommendations for TO2050.

AMATS creates *Annual Crash Reports (ACRs)* that have long served as an important tool for the area's community leaders in assessing safety. The ACR helps decisionmakers understand where and why crashes occur and the annual ranking of its high-crash locations has direct impacts on funding availability. The agency's *Funding Policy Guidelines* have incentivized the improvement of numerous high-crash locations over the past two-plus decades.

AMATS' ACRs have evolved over time. The most dramatic change occurred around 2021, when the methodology of ranking crash locations was altered to provide more weight to the area's most serious crashes. This is in line with changes made at the state level to emphasize Fatal and Serious Injury (FSI) crashes. Specifically, at least 30% of a specific location's crashes must be fatal or injury related to be included on a High Crash Section or Intersection list.

The 2021-2023 ACR reported, in most cases, a continuation of existing trends. The total number of crashes within the AMATS area has continued to trend downward over the past decade. 2023's number of reportable crashes within the AMATS planning area (15,045) is nearly as low as the 2020 level, which was an atypical time of lower travel and lower crashes due to the pandemic.

Less-severe crashes have also decreased over time. Areawide, PDO crashes in 2023 decreased by 1,128 (-9.0%) and Minor Injury crashes decreased by 421 (-11.7%) from the prior year (2022).

However, more serious crashes have continued to climb in recent years. Serious injury crashes, while significantly lower than a decade ago, rose significantly over the most recent year for which data was available (2023). Serious injury crashes increased by 22 (7.3%) from 2022 to 2023, and serious injuries increased more dramatically—63 (18.9%)—in the same timeframe.

Fatalities increased significantly in 2020 and have remained high since. Although vehicles are becoming safer in both crash performance and prevention, distracted driving and other high-risk behaviors (such as alcohol and drug impairment) have increased both nationally and regionally. This has led to a much higher number of both fatalities and fatal crash events than what existed pre-pandemic.

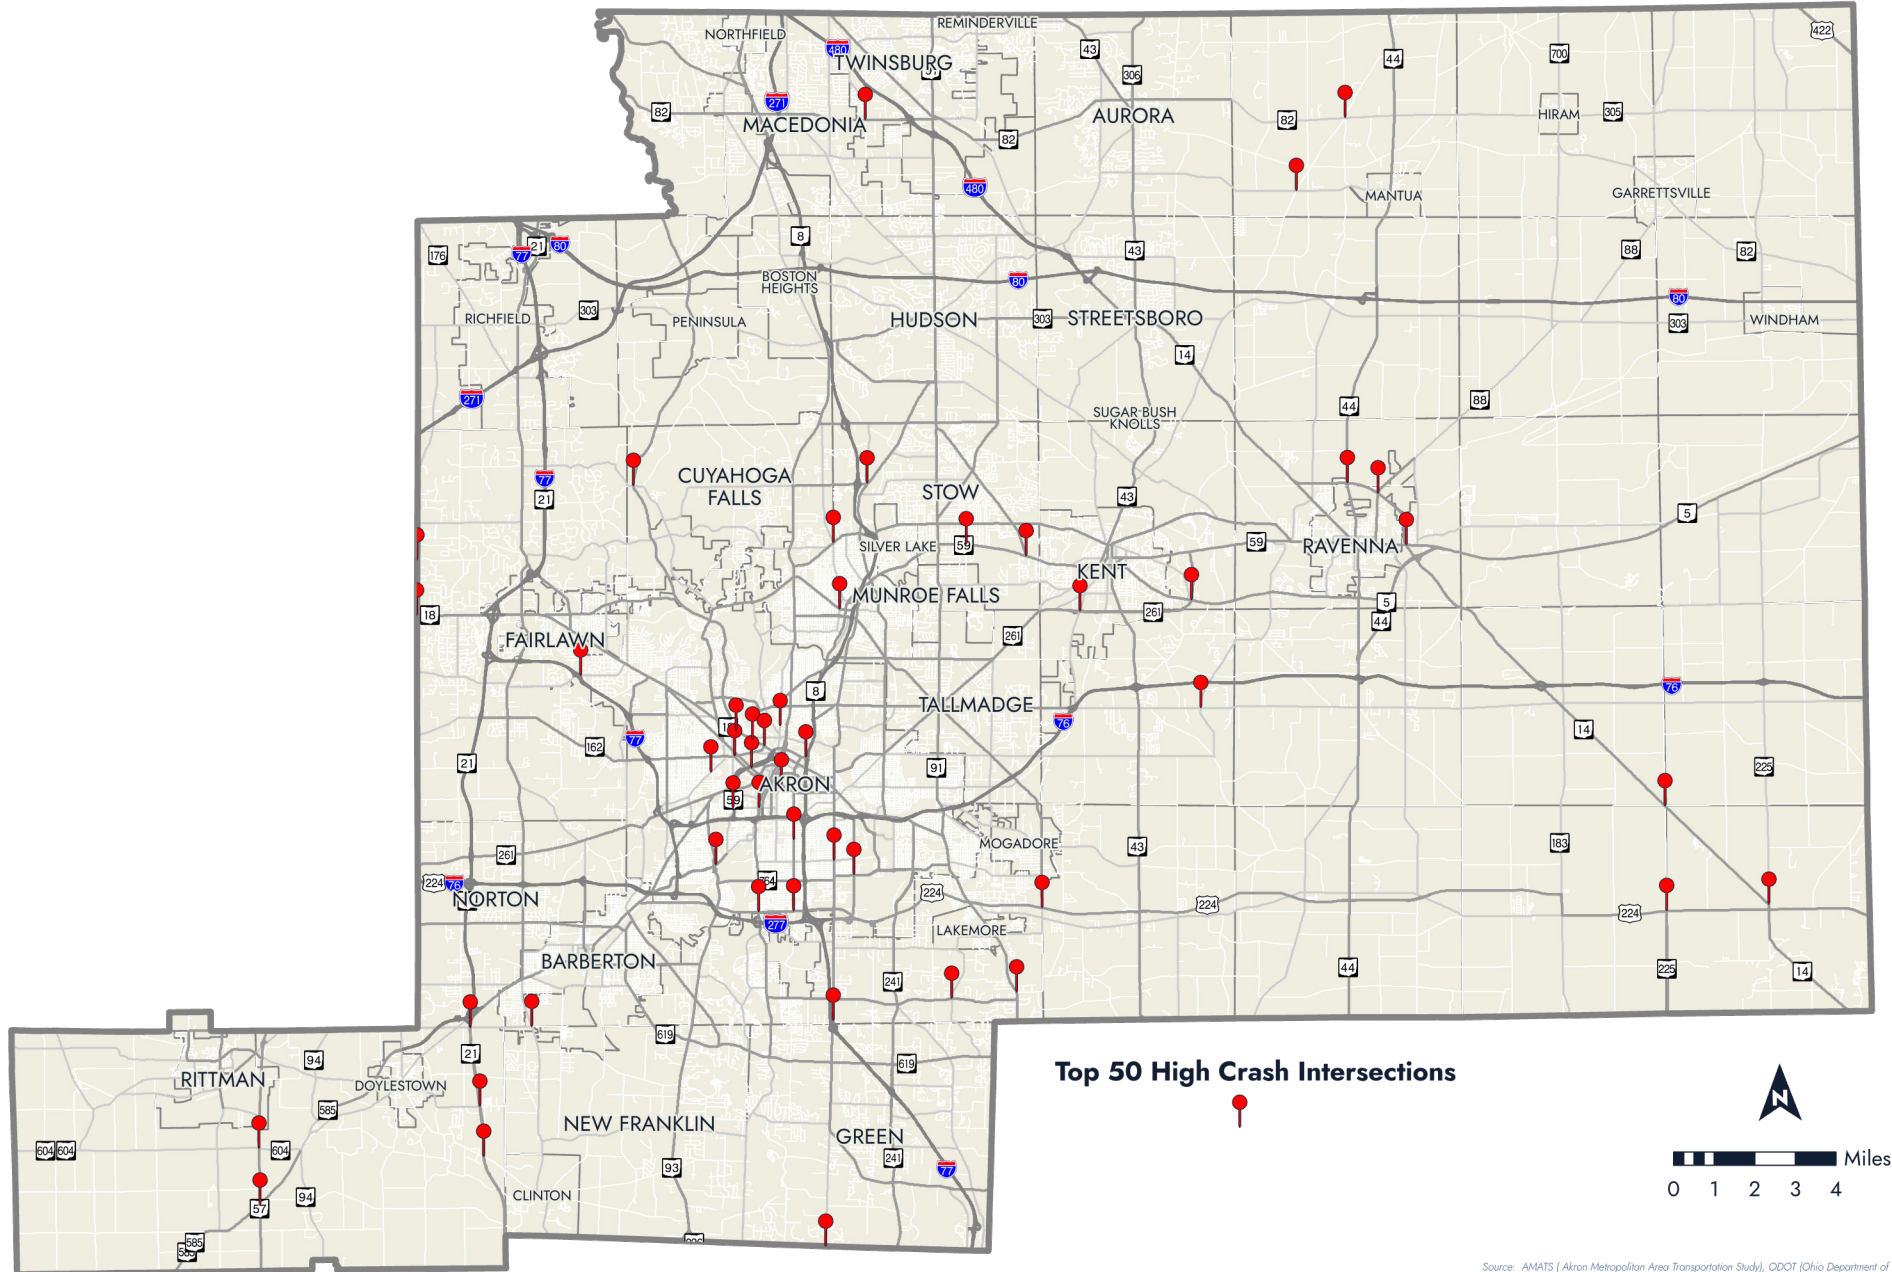

The 2021-2023 ACR can be found at:

<https://www.amatsplanning.org/sites/default/files/docs/reports/2021-2023%20Annual%20Crash%20Report%20FINAL.pdf>

Map 4-2 | Top 50 High Crash Segments (2021-2023)

Map 4-3 | Top 50 High Crash Intersections (2021-2023)

Source: AMATS (Akron Metropolitan Area Transportation Study), ODOT (Ohio Department of Transportation)

As FSI crashes increased at both a regional and national level, AMATS and its members became interested in focusing more on reducing these more severe crashes. Concurrently, a new federal program known as *Safe Streets for All*, arose out of the Infrastructure Investment and Jobs Act (IIJA), aimed specifically at reducing FSI crashes. AMATS completed its first *SS4A Action Plan* in May 2023.

The *SS4A Action Plan* led to several new strategies to improve regional safety. Perhaps most notably, the Action Plan created a High Injury Network (HIN) that considers the locations of the area's highest FSI-crash locations. Similar to the ACR, the SS4A's HIN considers sections and intersections.

The *SS4A Action Plan* differs from the ACR in several ways:

- focuses more heavily—almost exclusively—on the most-severe crashes (via the HIN).
- considers a five-year reportable period for crashes versus the three-year period in an ACR. The 2023 *SS4A Action Plan* considers crashes between 2017-2021, although the plan will be updated later in 2025 to consider 2019-2023 data.
- Contains a highly detailed safety analysis that showed and described data relating to how, where, when, and why crashes occurred throughout the region.
- Includes several prioritized lists of recommendations. These included project-based recommendations in short, medium, and long-term timeframes; strategy recommendations to improve behavior and reduce risks through a variety of initiatives; and transit-specific recommendations of various types

The current AMATS *SS4A Action Plan* can be found at:

<https://www.amatsplanning.org/sites/default/files/docs/SS4A-Action-Plan.pdf>

The SS4A HIN webapp can be viewed at:

<https://akrongis.maps.arcgis.com/apps/webappviewer/index.html?id=d3b866db810e470fb3de4b6a1ab81784>

Map 4-4 | Safe Streets for All High Injury Network

Security

Increasing the security of the transportation system for all users is a Federal Planning Factor, which AMATS must consider in its transportation planning process. AMATS coordinates with the Summit County Emergency Management Agency (EMA) and the Portage County EMA which are the two agencies responsible for emergency management, disaster preparedness and homeland security in the Greater Akron area. AMATS and the EMAs share mailings, meeting notices and information regarding critical infrastructure. Both METRO and PARTA are also required to address security in their planning efforts.

Condition and Preservation of the Existing System

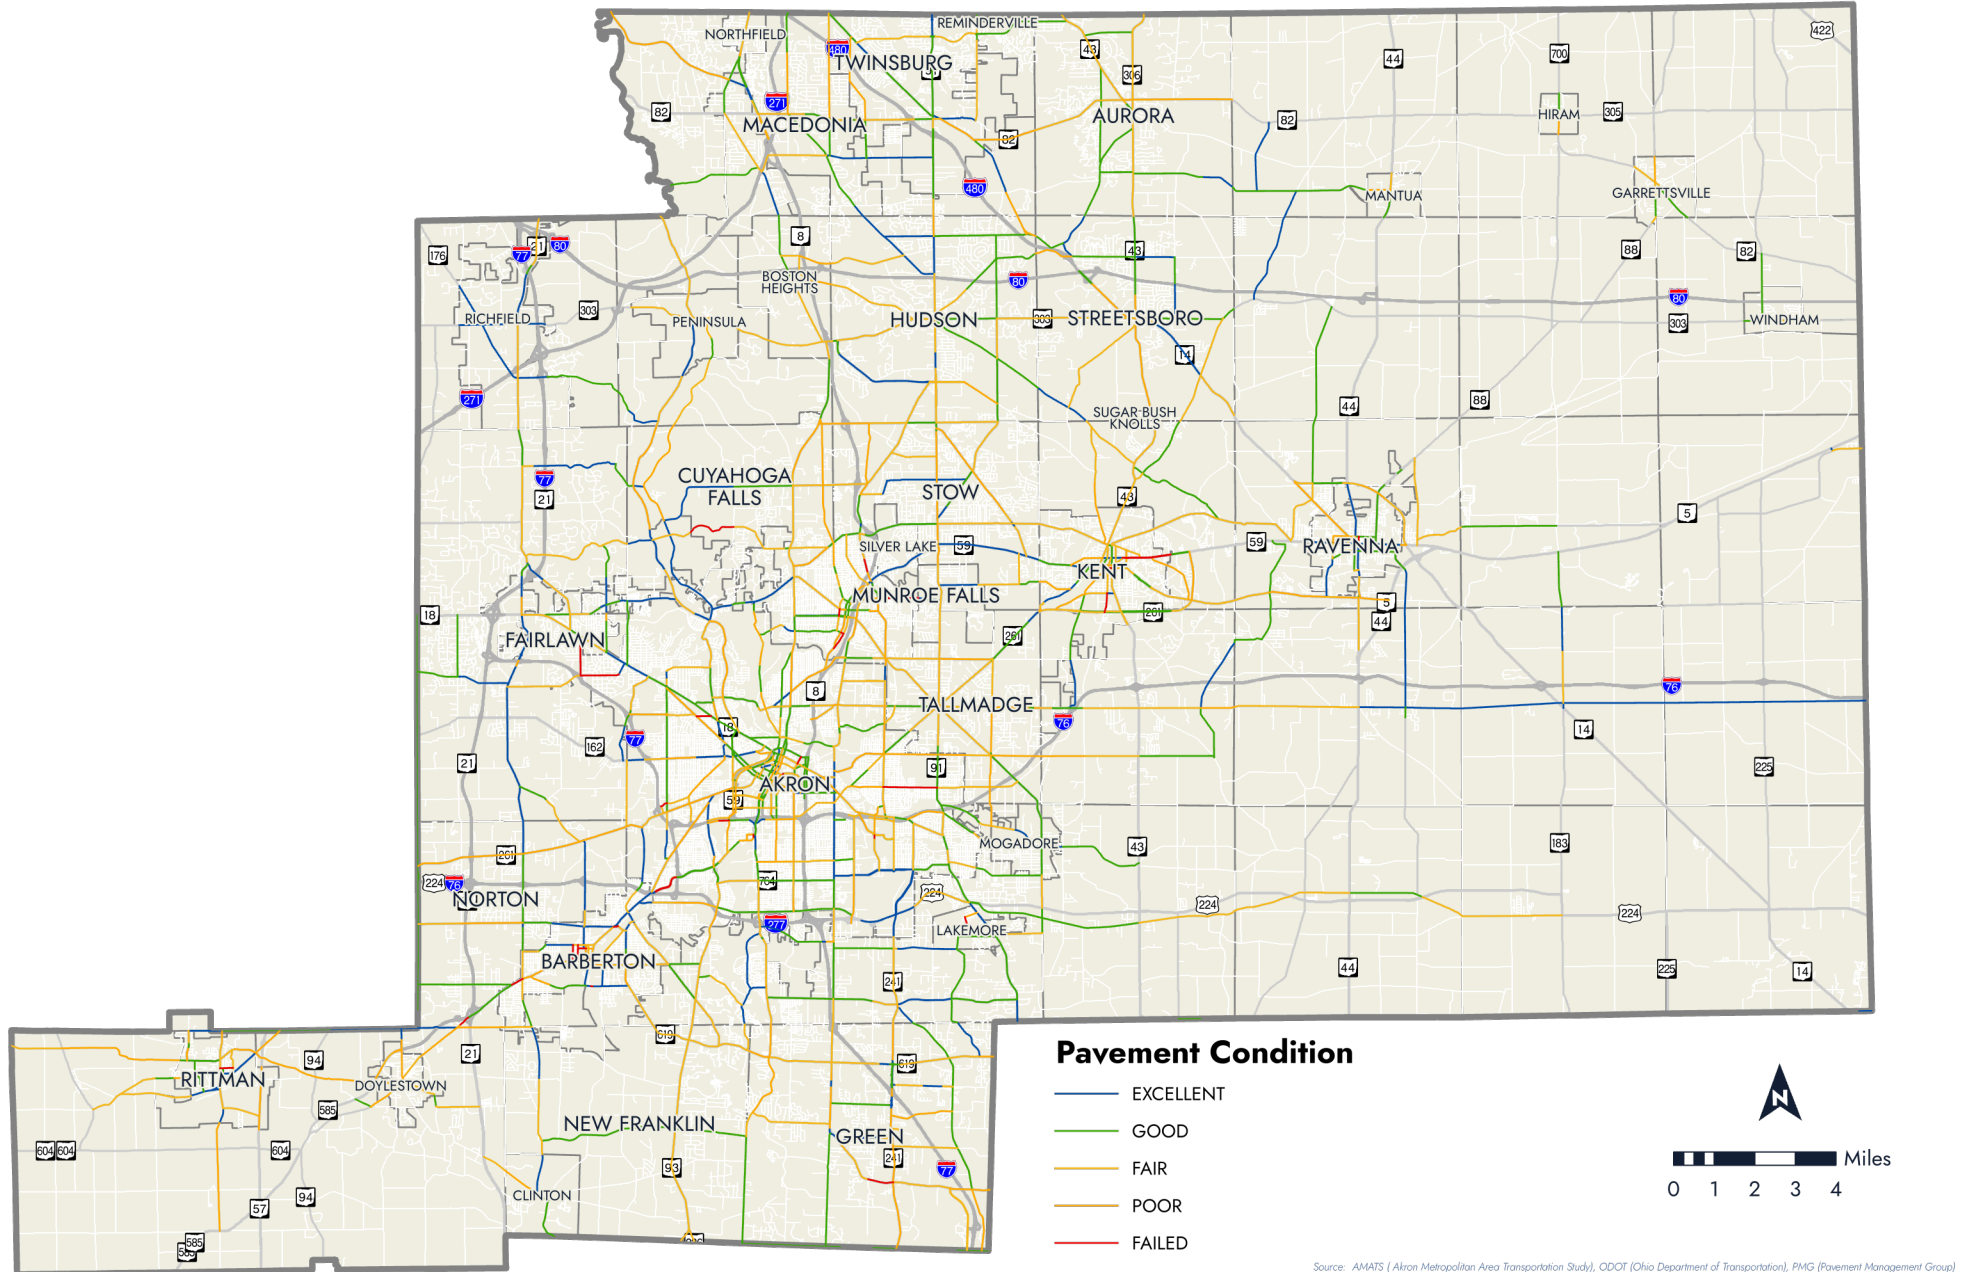

Another top priority for the region's transportation decisionmakers is to maintain and preserve the existing highway system. AMATS has consistently maintained this policy over the last decade as the cost of system maintenance has continued to rise and the availability of funding for local communities has continued to fall. AMATS continues to focus on a "fix-it-first" policy in its allocation of resources, which prioritizes funding for projects that preserve the existing system.

AMATS allocates a considerable amount of funding toward the resurfacing of roadways, reflecting the desire of area communities to keep roadways in a good state of repair. To track the condition of the area's pavements, AMATS collects pavement condition index (PCI) data on all federal-aid eligible roadways within the region. PCI considers the severity and extent of distress on a pavement surface at a given point in time. High resolution video is taken along area roadways and PCI is assigned for each segment. PCIs are ranked from 0 to 100, with 100 being freshly paved and 0 being complete failure of the pavement. Any location with a PCI of 80 or less is eligible for resurfacing if it hasn't been resurfaced with federal funds within the last 10 years. PCI has become the new pavement grading standard for AMATS and is used for funding selection and performance tracking. The AMATS Pavement Management Dashboard, which shows each road segment's PCI, can be found at <https://roadinsights.maps.arcgis.com/apps/dashboards/d1f87f5a3ee74df38c8a9e11c8788485>

Since the PCI data has been collected, the average areawide PCI has remained in the mid to upper 60s. AMATS' goal is to raise the areawide PCI to 70 by focusing on roadway preservation.

Table 4-2 PCI Systemwide Averages and Roadway Quality Percentages							
		Roadway Quality	2019-2020	2020-2021	2021-2022	2022-2023	2023-2024
2019-2020 Average	67	Excellent / Very Good	22%	20%	25%	26%	16%
2020-2021 Average	65	Good	29%	27%	28%	24%	28%
2021-2022 Average	68	Fair	34%	35%	34%	33%	37%
2022-2023 Average	66	Poor	13%	13%	11%	14%	17%
2023-2024 Average	67	Very Poor / Fail	3%	5%	2%	4%	2%

Map 4-5 | 2024 Pavement Condition Index

The resurfacing of pavement is an important and significant component of system preservation, but other components include pavement replacement (full-depth reconstruction) and the repair and replacement of bridges. AMATS completed its most recent *Highway Preservation Needs Report* in August 2024 to produce a high-level estimate of the federal funds that will be needed to preserve and maintain the region's existing highway system through 2050 (in 2024 dollars). All highway system preservation projects on the federal aid system will be considered consistent with TO2050 and will be eligible for federal funding as it becomes available.

The report estimated that the total cost of preserving the existing system over the next 26 years would cost \$6.86 billion, valued in 2024 dollars. This cost estimate is approximately 71% higher than the amount estimated in the last (2019) system preservation report. As shown in the graph below, resurfacing needs are estimated to cost \$1.90 billion; pavement replacement would cost \$0.12 billion; and bridge preservation would cost \$4.45 billion.

An important component of the 2024 *Highway Preservation Needs Report* involved reviewing and right-sizing assumptions on the cycles for pavement and bridge maintenance activities. Had this not occurred, the increase from 2019 would have been an even more staggering 81% increase. The inflation of construction and material costs have both increased significantly since 2019 while the highway system's size has remained very similar; road mileage length has only increased by 25 miles over the past five years. Therefore, the higher preservation cost is primarily due to increased construction costs for both pavement and bridge maintenance.

It is important to note that this analysis only includes the highways eligible for federal funds. Local roadways and rural minor collectors, which are ineligible for federal funds, account for almost exactly two-thirds (66.3%) of the region's total lane miles. This means that the burden of most roadway maintenance falls on the shoulders of local public agencies such as communities, many of which struggle to find necessary funding for their transportation infrastructure.

Ultimately, the \$6.86 billion system preservation cost estimate exceeds the *total* predicted revenues the Greater Akron region can expect to receive until 2050. TO2050 must be fiscally constrained, and AMATS recognizes that system preservation is just one goal of the transportation system. Therefore, AMATS cannot possibly estimate the fulfillment of 100% of the system preservation need. This is not new—some past regional transportation plans have estimated the funding of less than 100% of the preservation need—but the gap is widening. Once TO2050 accounts for the specific non-preservation-based highway projects, this leaves approximately 65% of this system preservation costs that can be fulfilled. Without a significant additional infusion of funding, the region will fall further behind in maintaining the transportation system. While this problem is widespread across the country and

not unique to the Greater Akron area, it is concerning nevertheless. AMATS recommends that communities consider reducing pavement areas or even decommissioning roadways where feasible and as funding becomes available. Further, AMATS promotes caution in expanding roadways and building additional travel lanes as additional system expansion will become difficult to maintain long-term.

Congestion

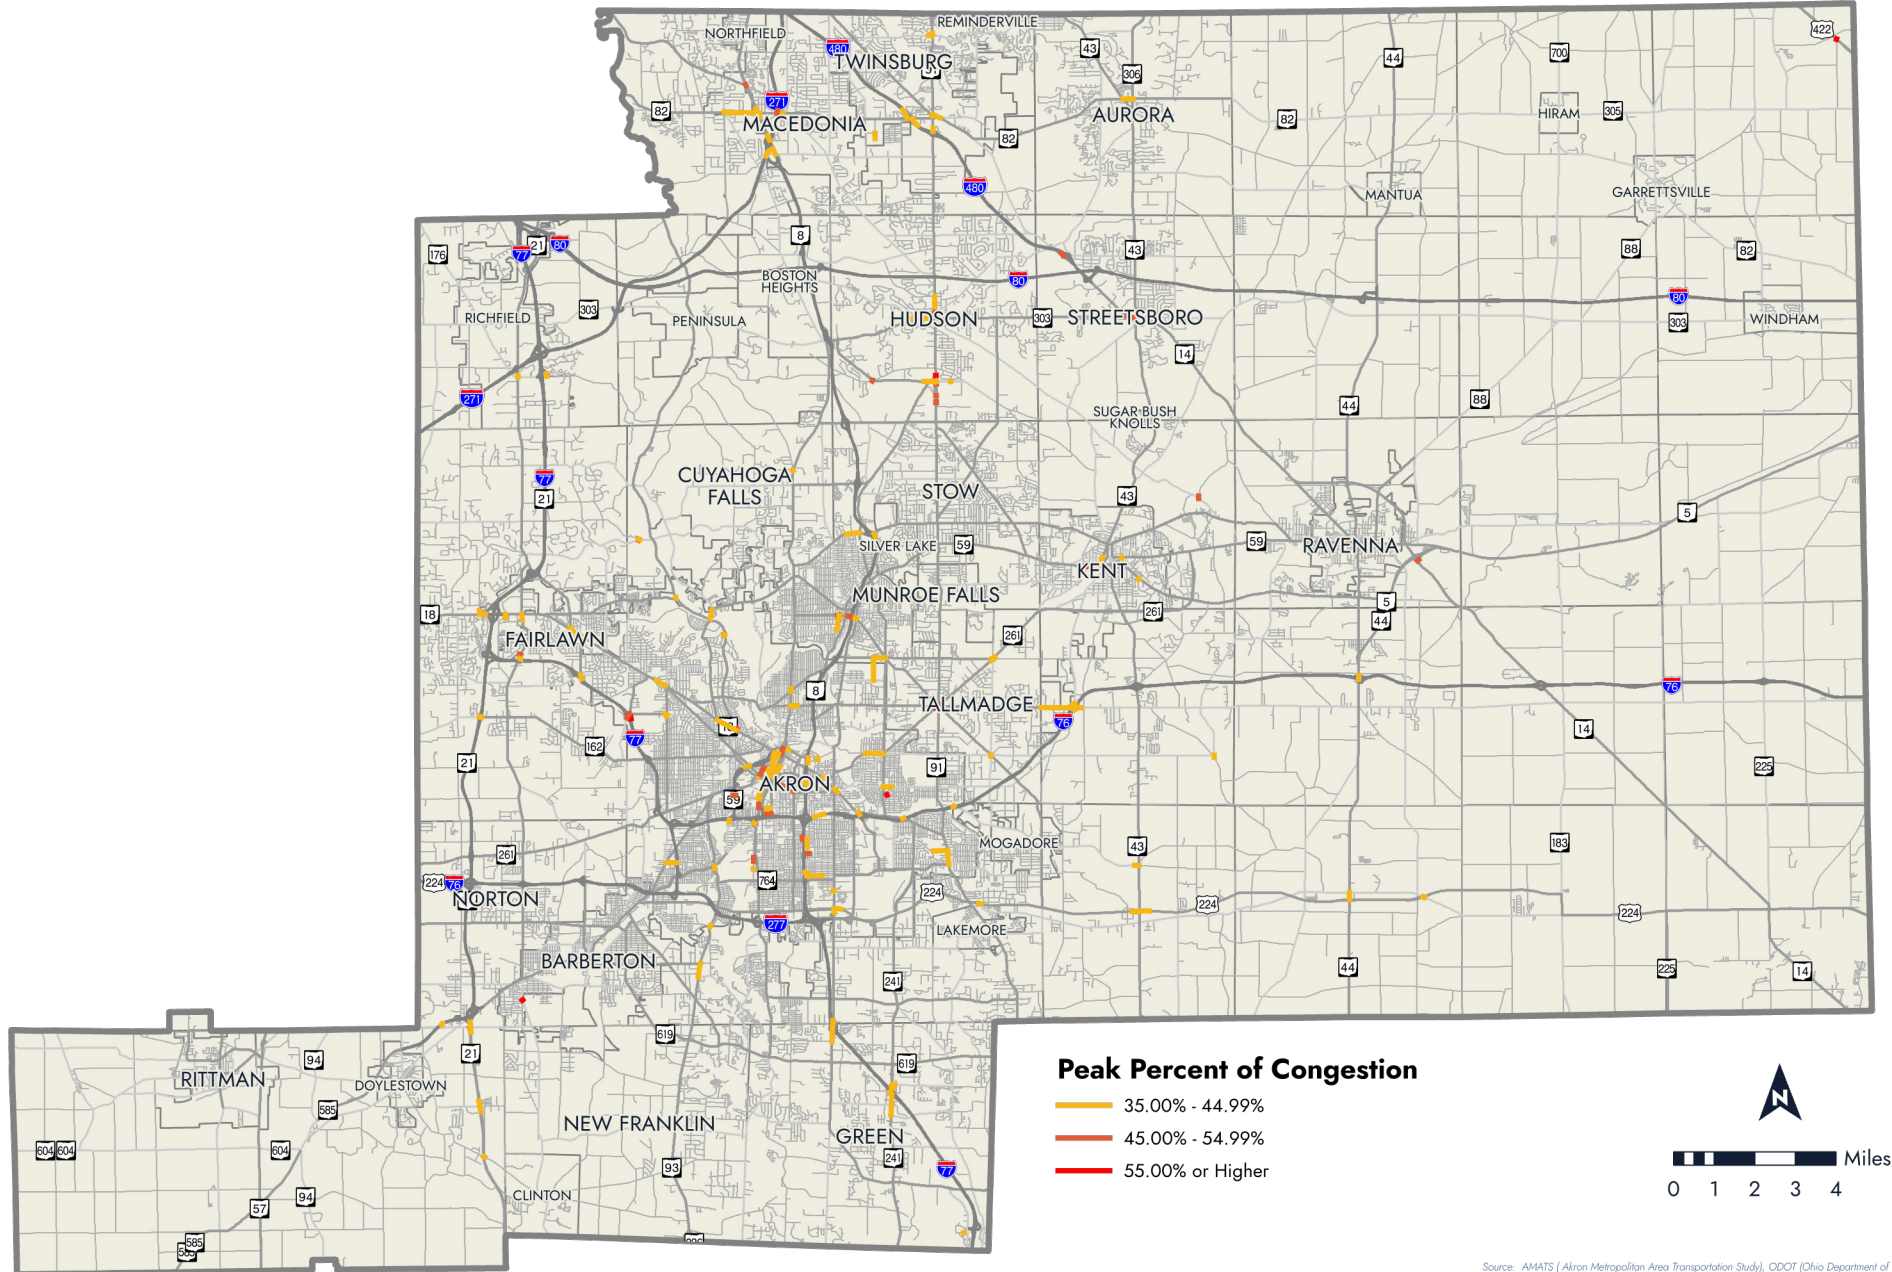

Vehicular congestion is, for most drivers, among the most frustrating aspects of driving. It is annoying for travelers to sit in traffic; and congestion also reduces travel time reliability for vehicles, buses and truck freight. It compromises the timely delivery of products and services, hinders the built environment, and can create barriers to pedestrians and cyclists. Congestion has myriad effects on the economy, the environment, and the population's well-being and quality-of-life.

Per federal regulations, large MPOs such as AMATS are required to create a Congestion Management Process (CMP) to understand a regional congestion picture and identify strategies to reduce congestion. Each CMP is required to:

- Identify methods to monitor and evaluate the performance of the multimodal transportation system
- Define congestion management objectives and performance measures
- Establish a coordinated program for data collection and system performance monitoring
- Identify and evaluate f anticipated performance and expected benefits of congestion strategies
- Create an implementation schedule, responsibilities and funding sources for each strategy
- Determine a process for periodic assessment of the effectiveness of implemented strategies

AMATS completed its most recent CMP in December 2024. The CMP first analyzed congestion along many higher classification roadways and all freeways. This network totals about 540 miles. Map 4-6 on the following page shows the CMP analysis network.

Map 4-6 | Peak Percent of Congestion

Methodology

To measure congestion, AMATS obtained traffic data through the collection of cell phone and other GPS device location data. The Ohio Department of Transportation (ODOT) contracts with two data providers—INRIX and Streetlight—and shares access to this data with Ohio’s MPOs like AMATS. For the AMATS CMP, Streetlight data was used to evaluate the major arterial and lower federal functionally classified roads while INRIX data was used to analyze the freeway system. 2022 data was utilized for the CMP, as it was the most recent full year of data available for both INRIX and Streetlight at the time of the CMP’s preparation.

The congestion analyses focused on three time periods in order to capture the most common times of congestion:

- Morning from 6:00 AM to 10:00 AM
- Mid-day from 10:00 AM to 4:00 PM
- Evening from 4:00 PM to 8:00 PM

Congestion Management Strategies

AMATS has established generalized strategies that best match the Code of Federal Regulations (CFR), FHWA guidance, and regional transportation planning context. A strategy or combination of strategies that are appropriate for deficient corridors and segments are selected based on the type of congestion and their effectiveness and feasibility.

Like the previous CMP, AMATS categorized congestion management strategies into five tiers ranked generally by the efficacy and efficiency of mitigating congestion. The strategies in the top tiers, when possible, should be given priority over the lower ones.

- Tier 1: Demand management
- Tier 2: Traffic and roadway operational improvements
- Tier 3: Public Transportation improvements
- Tier 4: ITS Strategies
- Tier 5: Capacity expansion

These strategies consider both the demand and supply of traffic. A strategy or combination of strategies that are appropriate for deficient corridors are selected based on the intensity of congestion and the other analyses completed in the CMP.

The congestion management strategies were evaluated based upon their effectiveness and feasibility. The effectiveness was determined by how well each strategy would reduce congestion in the AMATS area. To make this determination, the strategies were reviewed by examining regional characteristics, previous local success of the strategies and examples from other urban areas. Decisions on the effectiveness of each strategy were made based on the data collected and staff input. Feasibility was rated by the degree to which the strategy could be realistically implemented in the region. Table 4-3 below lists these strategies along with their corresponding effectiveness and feasibility.

Table 4-3 | Congestion Management Strategies

TIER	STRATEGY	BENEFITS	EFFECTIVENESS	FEASIBILITY
Tier 1: Demand Management	Telecommuting	Reduces traffic, especially during peak hours	Medium / High	Medium
	Flexible / Alternative Work Hours	Reduces traffic, especially during peak hours	Medium	Low / Medium
	Carpooling	Reduces traffic, especially during peak hours	Medium / High	Medium
	Employer Incentive Program	Reduces traffic, especially during peak hours	Medium / High	Low
	Alternative Modes of Transportation	Reduces traffic	Low / Medium	Low
Tier 2: Operational Improvements	Adding exclusive left turning lanes	Improves traffic flow / safety	Medium	Medium
	Access Management of roadway / driveways	Improves traffic flow / safety	Medium	Medium
	Variable speed limits	Improves traffic capacity / flow	Low / Medium	Low
	Variable message signs	Improves traffic flow and reduces additional congestion	Low / Medium	Medium
	Exclusive shoulder lanes for buses	Improves traffic flow / safety	Medium	Low
	Geometric improvements to road and intersections	Improves traffic flow / safety	Medium / High	High
	Channelization	Improves traffic flow / safety	Low / Medium	Medium
	Median barriers (moveable) to facilitate more capacity during peak period	Improves traffic capacity / flow	Medium / High	Low
	Traveler information	Improves traffic flow / safety	Low / Medium	High
	Complete Streets	Improves capacity for alternative modes of transportation	Low / Medium	Medium
Tier 3: Public Transit Improvements	Overpasses or underpasses at congested intersections or railroads	Improves traffic capacity / flow	High	Low / Medium
	Expanding transit services	Encourages transit use / reduces SOV vehicles.	Medium	Low
	Optimal control of headways by realigning transit service schedules and stop locations	Makes transit easier to use / reduces SOV vehicles.	Medium	Medium
	Providing real-time information on transit schedules and arrivals using various ITS strategies	Makes transit easier to use / reduces SOV vehicles.	Low	Medium
	Universal transit fare cards and incentives	Makes transit easier to use / reduces SOV vehicles.	Low / Medium	High
	Bus Rapid Transit	Makes transit easier to use / reduces SOV vehicles.	High	Medium
Tier 4: ITS Strategies	Prioritizing transit vehicles at traffic signals	Makes transit easier to use / reduces SOV vehicles.	Medium	Medium
	Traffic Signal Improvements	Improves traffic flow / safety	Medium / High	High
	Simulation models	Helps determine and fund projects with the most impact	Medium / High	Medium
	Cars Connected to Cars/Cars Connected to Infrastructure	Improves traffic flow / safety	Medium / High	Low
Tier 5: Capacity Expansion	Real-time traffic feedback	Improves traffic flow and reduces additional congestion	Medium / High	High
	Removing bottlenecks by constructing new lanes	Improves traffic flow / safety	Medium	Low
	Closing gaps in the existing network	Improves traffic flow / safety	Medium	Low
	Add travel lanes on major freeways and streets (including truck climbing lanes on grades)	Improves traffic flow / safety	Medium	Low

Congestion Management Recommendations

Freeways

The region's freeways are in the midst of a major overhaul, especially near Akron's downtown where many of the freeways converge. The Ohio Department of Transportation's Beltway project has included multiple ramp closures and detours over the last three years. The State Route 8 Bridge replacement project over the Cuyahoga Valley just north of Akron's downtown is also currently under construction. These large-scale construction projects that are ongoing make it difficult to recommend improvements for the region's congested segments because they include detours and closures that impact the surrounding freeway traffic. These concerns can be applied to every freeway segment AMATS identified in its 2022 scan. The 2024 CMP recommends continuing to monitor all 24 congested freeway segments while construction progresses.

Arterials

AMATS congestion analysis identified 84 congested segments on the arterial roadway network. None of the segments identified received a tier 5 recommendation for added capacity as none of the segments had congestion that would be appropriate for major widenings. As the roadway network continues to age, AMATS believes a prudent approach is to focus on travel demand, operational improvements, alternative modes of transportation and intelligent transportation strategies to reduce congestion.

Incident-Related Traffic Congestion

The CMP also considers incident-related traffic congestion, which is congestion that occurs due to a non-recurring incident such as a crash or a vehicle breakdown. While crashes can happen anywhere at any time, some locations are more prone to crashes than others. Locations with both frequent crashes and recurrent congestion will be significantly more congested. Effective transportation planning requires that incident-related congestion be analyzed.

Freeways

The analysis of freeway crashes in the AMATS area is done by the central office of the Ohio Department of Transportation (ODOT) in Columbus. ODOT's analysis of freeways is done using their own methodology which is derived from the Highway Safety Manual. The freeway system is divided into rural and urban classifications and is analyzed by examining segments that are one-tenth of a mile long.

To make data-driven decisions and determine operationally sensitive corridors throughout the state, ODOT has developed the Traffic Operations Assessment Systems Tool (TOAST). In TOAST, routes are segmented into the State Priority System with breaks at the urban area boundaries, interchange center points, and road functional class changes. The data categories that make up TOAST are listed below:

- Travel Time Performance – percent of time motorists can travel at or near (90%) of the reference speed (free-flow speed defined by data provider).
- Bottlenecks – A potential bottleneck is detected when speeds on a segment drop to 65% of reference speeds and cause at least a two-minute delay.
- Incident Clearance – The time from report of an incident until the entire scene is cleared.
- Secondary Crashes – percent of crashes that occurred as a result of a previous incident.

- Volume Per Lane – Calculated based on a weighted average for each segment.
- Freight Corridors – Weighted average of percent trucks (average daily truck volume ÷ average daily total volume).
- Safety Performance – A route’s potential for safety improvement by density based on its peer group.

Arterial Sections and Intersections

Areas of incident-related congestion are determined based on a composite score which considers both number of crashes and their severity to determine locations where incident-related congestion is most likely to occur. More information on how this composite score is determined can be found in the aforementioned [2021-2023 Annual Crash Report](#). Maps showing Top-50 High Crash Sections and Intersections can be found within that report and in the *Safety and Security* subsection above.

Other Considerations

The CMP also notes several other important considerations which are discussed in more detail elsewhere in TO2050. These include:

- Transit—route performance and most-used bus stop locations
- Freight—congested locations around job hubs and high volume at-grade rail crossings
- Performance Measures—related to travel time reliability and freight movement

The complete 2024 CMP can be found at:

<https://www.amatsplanning.org/sites/default/files/docs/reports/2024%20CMP.pdf>

Freight

The movement of freight is an important part of a fully functioning transportation system. The efficient movement of freight within and through a region is critically important to industry, retail commerce, agriculture, international trade, and terminal operators. Metropolitan areas with a higher density of development are especially affected by freight movement issues.

AMATS’ freight planning process includes three primary strategies:

- Developing and maintaining databases and analysis tools for decision-making
- Interacting with AMATS members and freight stakeholders to better understand the freight system, identify common issues, and build consensus
- Incorporating freight into the regional transportation planning process

The mechanism by which AMATS sets the stage for implementing these strategies is AMATS’ Regional *Freight Plan*. AMATS completed its most recent *Freight Plan* in September 2024, and its purpose is to identify the transportation systems that exist in the AMATS area used to move freight into, out of, and within the region. It addresses the factors and trends that affect traffic and the flow of freight, and outlines procedures used for planning and programming freight-related projects through the AMATS transportation planning process.

The plan analyzes the highway and rail freight networks (the rail freight network is discussed later in Section 4), considers the freight movement and efficiency of movement around various job hubs throughout the region, and makes recommendations related to freight.

Roadway Freight Network

Trucks move the majority of Ohio's and Greater Akron's freight. The region is well-served by a particularly comprehensive network of limited-access freeways compared to many other similar regions. The construction of key highways, most of which were built in the 1950s through the 1970s, contributed to a significant development of industrial and commercial economic generators within proximity of freeway interchanges. Freeways including Interstates 76, 77, 271, and 277; The Ohio Turnpike (I-80); other limited-access freeways such as SR 8 and SR 21; and various beltways—most of which are in Portage County—including portions of SR 5, SR 14/44, SR 59, US 224, and SR 261 comprise this network and allow easy access to other roadways within the freight network.

While the Greater Akron area's roadway freight network has allowed for a diversified economic base and other positive economic indicators, it also leads to a large number of trucks on the road. Trucks account for much of the wear and tear on roadways. A large, legally loaded truck weighing 80,000 pounds puts about the same wear and tear on a road as 9,000 to 10,000 cars. Furthermore, a large truck causes as much congestion as 2.5 to 3.5 cars on flat terrain and as much as 15 cars on uphill grades. This touches on both the importance of preserving roads and bridges and managing congestion, both of which were discussed earlier in this Section 4.

Job Hubs and Freight Profiles

In 2017, AMATS partnered with Fund for Our Economic Future (The Fund) to develop 14 Job Hubs in the AMATS area. More recently, and to adjust to changing economic conditions, two additional Job Hubs were added within the region, bringing the total to 16. These Job Hubs, shown on Map 4-7, are specific places of concentrated economic activity within the region and are defined and identified based upon the following criteria:

- **High concentration of traded-sector jobs:** We identified job hubs based on the number of traded-sector jobs in a particular area, with a focus on places with job density in the top 5 percent in the region. The research focused specifically on identifying clusters of employment in sectors of the economy like manufacturing or business consulting that can export (or trade) goods and services outside of Northeast Ohio.
- **Multiple traded-sector employers:** Job hubs represent "clusters" of business activity and other assets like roads, highways, transit, and utilities. Business clustering allows for efficient use of infrastructure and creates other spill-over benefits from the accumulation of human and physical capital.
- **Alignment with local development patterns:** Job hubs reflect local development patterns and the location of businesses, infrastructure, transportation assets, and land inventory in each place. This alignment with the built environment will hopefully facilitate local community planning discussions around potential land use policies, transportation investments or other strategies to enhance each job hub's market competitiveness.

- **Alignment with civic priorities and economic development opportunities:** Beyond encompassing many existing businesses and jobs, job hubs also contain high-quality sites with existing infrastructure or office inventory that, if occupied, could further add density to the job hub.

Map 4-7 | AMATS Job Hubs

Source: AMATS (Akron Metropolitan Area Transportation Study), ODOT (Ohio Department of Transportation)

The 2024 *Freight Plan* developed Freight Profiles centered around each of the 16 Job Hubs. Each Freight Profile within the *Freight Plan* contains:

- a general description of the corridor
- additional relevant information such as location, accessible Interstate / Freeway routes, the number of jobs and pavement conditions in and around the corridor.
- tables identifying safety and traffic issues in and around the corridor
- Maps showing the inbound and outbound truck traffic for the corridor

Recommendations

The highest priority needs in the AMATS area regarding freight movement involve improvements to the highway and rail systems. The AMATS Highway Preservation Needs Report and the Congestion Management Process Report (CMP) address the needs of the AMATS area in terms of highway improvements that streamline the flow of freight in the region. After studying existing and future levels of congestion, the CMP makes recommendations which are then considered for inclusion in the financially constrained Transportation Outlook 2050.

Freight movement, by way of trucks, is heavily concentrated on freeways and major state routes. The number of trucks on these roads range from 50 to 20,705 trucks per day, with I-271 in Macedonia being the busiest freeway for trucks. Highway improvements such as the Central Interchange project will help improve the efficiency of freight movement on the area's roadways. Recommended grade separations will reduce delays and eliminate conflicts between trains and automobiles.

Since the approval of the current 2020 Freight Plan in September 2020, ODOT has completed improvements to the South Main/Broadway interchange with I-76/77 just south of downtown Akron. This \$113 million project included removing interchanges at Wolf Ledges Parkway and Grant Street, and reconstructing access points and re-aligning Main Street and Broadway.

In addition, there are several ongoing and upcoming projects that will aid in the improvement of the overall freight network. These projects include:

- The SR-8 Bridge Replacement (SR-8 High Level Bridge over the Little Cuyahoga River Valley in Akron), a \$193.4 million project under construction, expected to be complete in 2028 (PID 91710).
- The widening of I-77 in Northern Summit County from SR 21 north to the Cuyahoga County line, including the replacement of several bridges, a \$124.1 million project currently under construction, expected to be completed in mid-2027 (PIDs 111404 and 111405).
- The I-76/77/SR 8 Akron Beltway Improvements in the City of Akron, currently under construction. This \$245.8 million project includes pavement replacement, additional lanes, and the realignment of several ramps (PID 102329). Estimated completion is expected in mid-2025.
- The I-76 Kenmore Leg Major Rehabilitation is a \$85.8 million project expected to begin construction in spring 2027, finishing in 2029 (PID 100713). This project includes full-depth road base replacement, widening, bridge replacements and noise walls.

TO2050 Recommends the prioritization of both safety and operational improvements near heavy freight corridors. These would include the entirety of the freeway network and roads within and serving Job Hubs around the region.

The 2024 AMATS Freight Plan can be found at:

<https://www.amatsplanning.org/sites/default/files/docs/reports/2024%20Freight%20Plan.pdf>

Active Transportation

Active Transportation is an increasingly important mode of transportation for many people. Communities around the region report that many residents consider active transportation planning to be highly important, and they desire more opportunities to safely and conveniently move about without reverting to motorized transportation. Walking and bicycling are what comes to mind when thinking of active transportation, but micromobility and transit have active components that require consideration. Active transportation users are not only those who walk or bike to work, but include those who walk to a parking garage, use a bike to get to a bus stop or anyone walking a dog. Additionally, active transportation includes those using trails or sidewalks for recreation.

Active Transportation users are the most vulnerable roadway users in a system where automobiles can appear ubiquitous. Whether people choose active transportation (for exercise and fun) or rely on non-vehicular transportation daily to get where they need to be, active transportation users typically have to interact within a transportation network that includes motorized transportation moving at higher speeds. When walking or bicycling cannot be done safely or conveniently, many may be deterred from being active, which may have ramifications for our area's overall health and environment. Planning a connected system that considers all users of our roadways benefits everybody.

AMATS completed its most recent Active Transportation Plan (ATP) in May 2024. The ATP highlights what has been accomplished within the region and identifies additional recommendations for improving its active transportation network. Over the past decade, the AMATS Policy Committee has adjusted its funding policies to allow additional funding for bicycle and pedestrian projects. Because of these policy changes, the region has seen an increase in facilities for people who travel by foot, wheelchair, bicycle or scooter.

Bicycle Network

At the time of the ATP's writing, the AMATS planning area's bicycle network included 158 miles of shared use paths and 60 miles of bicycle lanes for a combined network 218 miles of bicycle infrastructure. This shows an increase of 46 miles of added infrastructure since the 2019 ATP.

Much of the shared-use path network is comprised of "bike and hike" trails that provide generally safe access because of limited interaction with the roadway network. Larger regional trail systems include:

- The Ohio and Erie Canal Towpath Trail—a 100+ mile primary trail; the AMATS region portion spans south to north in Summit County from Clinton to Sagamore Hills
- Summit Metro Parks Bike & Hike Trail—Multiple trails that span 34 miles throughout eastern and northern Summit County, a small portion of Portage County, and into Cuyahoga County.

- Summit Metro Parks Freedom Trail—A trail from Tallmadge to downtown Akron; will eventually connect to The Towpath
- The PORTAGE Hike & Bike Trail—A trail from the end of The Freedom Trail (Tallmadge/Kent border) to Ravenna Township
- The Headwaters Trail—A trail from Mantua Township to Garrettsville; plans are in place to continue the trail to the west into Aurora and, eventually, Cuyahoga County
- The Heartland Trail—Begins in Wayne County (Orrville) and heads north into Marshallville; plans are in place to extend into Chippewa Township and eventually to connect to the Towpath in Clinton
- The County Line Trail—This trail runs from Creston (in Wayne County, just outside of Milton Township) into Rittman.

Smaller, community-specific connections are becoming more popular throughout the region. These trails, many of which have future expansions and connections into regional trails planned, include trails such as The Spartan Trail in Lakemore and Springfield, The Mud Brook Trail in Cuyahoga Falls, The Bath Nature Preserve Trail, Hudson's Nicholson and Turnpike Trails, and Twinsburg's Center Valley Park Trails.

Some cyclists, particularly longer-distance endurance cyclists, prefer to ride on roads, and poor pavement conditions are a barrier to on-road riding. Rough roads can be an annoyance in a vehicle but are potentially hazardous for cyclists. The pavement condition map shown previously (Map 4-5) highlights the current condition of area roadways.

In 2024, AMATS completed a comprehensive update of its [Bike Map](#), a resource that allows area bicyclists to see the bike network for the entire region. In addition to the shared-use path and bike lane networks, the map shows the locations of steep slopes, trailheads (parking and restroom locations), bicycle shops, hospitals, and other useful information. Print versions of the map are available in most area bicycle shops and in many other public locations. An [online version of the map](#) was completed in 2025 showing much of the same information but in a format that allows for easier viewing from a mobile device.

Map 4-8 | AMATS Existing Bicycle Network

Source: AMATS (Akron Metropolitan Area Transportation Study), ODOT (Ohio Department of Transportation)

Pedestrian Network

The AMATS region contains approximately 2,900 miles of sidewalks. A regional sidewalk inventory was taken by AMATS in 2015 and updated in 2017. This inventory, shown on Map 4-9, shows significant sidewalk coverage in most of the larger and denser communities, and considerably less sidewalk coverage in rural and low-density suburban areas. Each year, new sidewalks are constructed in areas where they did not previously exist, particularly in suburban communities that are seeking to retrofit post-WWII suburbs or newer suburbs into more walkable communities.

Although sidewalks are the primary facility for pedestrian travel, shared-use paths and trails (described in the previous subsection and shown on map 4-8) are heavily used by both pedestrians and cyclists. Although used primarily for recreation, bike/hike trails and shared use paths can be combined with sidewalks where connections exist to extend walking trips and allow pedestrians the option to walk to closer destinations.

The Greater Akron area is extremely fortunate to have numerous parks with more primitive hiking trails throughout the region. In addition to the large Cuyahoga Valley National Park within the region, the Summit Metro Parks and the Portage County Park District each contain myriad parks with hiking trails within. Many of the region's municipalities also contain locally managed parks with hiking trails. These trails, most of which are used purely for recreational purposes, allow another option for those desiring to walk for physical or mental health benefits.

Having places to walk—sidewalks and trails—is necessary for active transportation to occur, but these alone do not guarantee a safe and accessible system. Other important components of a well-rounded pedestrian network include crosswalks, mid-block crossings, signs, pedestrian countdown timers, Rapid-flashing beacons and HAWK signals, illumination, benches, and connections to shared-use paths. These elements are becoming increasingly popular in areas where pedestrians have a higher likelihood of coming into conflict with automobiles (i.e. higher traffic roadways) or where past incidents have occurred.

Map 4-9 | AMATS Sidewalk Inventory (2015-2017)

Micromobility

Micromobility is defined by the Federal Highway Administration as “any small, low-speed, human, or electric-powered transportation device, including bicycles, scooters, electric-assist bicycles (e-bikes), electric scooters (e-scooters), and other small, lightweight, wheeled conveyances.” Micromobility can be an effective mode of transportation in dense downtown, urban core, college campuses and areas with high non-vehicular traffic.

Micromobility includes privately owned scooters and, more commonly, rentable scooters managed by private companies. Within the AMATS area, privately managed micromobility currently exists in two cities. *Spin*, a dockless e-scooter company, has provided micromobility options, primarily along key corridors of the city around downtown Akron and the University of Akron (UA) campus since 2020. *Spin* also formed a partnership with the city of Kent in early 2022 to provide e-scooters and e-bikes around downtown Kent and Kent State University (KSU) campus. Hundreds of these scooters have been seen in use throughout neighborhoods of Akron and Kent, particularly around college campuses and in downtown business districts.

Safety

As bicycling and walking increase in popularity, there is growing concern about the safety of bicycle riders and pedestrians. Determining how and where these incidents occur can help plan for future bicycle lanes, sidewalks, lighting, and educational outreach. Bicycle and pedestrian-related crashes tend to happen more randomly and usually do not have the characteristic of being concentrated at specific locations to the same extent as vehicular crashes. A sound planning approach to counter this randomness is to pursue improvements along a corridor rather than a specific location.

Significant urgency to address bicycle and pedestrian safety exists because crashes involving these users result in a high percentage of injuries. Over the three-year period between 2021-2023, 91.9% of bicycle crashes and 96.5% of pedestrian crashes within the planning area resulted in some level of injury or a fatality.

AMATS analyzes bicycle and pedestrian safety within its two safety reports detailed earlier in this Section 4. According to the most recent (2021-2023) *AMATS Annual Crash Report*, bicycle and pedestrian crashes have increased each year since 2020. Bicycle crash incidents are still significantly lower than they were a decade ago but pedestrian crashes have grown to nearly match previous levels. The graphs below show the crash totals for bicycles and pedestrians from 2013 to 2023.

Both the *Annual Crash Report (ACR)* and the *Safe Streets for All Action Plan (SS4A)* report trends that vary relatively little year-to-year: Bicycle crashes typically spike in the summer when riders are most active, while pedestrian crashes almost always peak in October. For both pedestrians and cyclists, crashes are most likely to occur later in the afternoon; the spike for bicyclists being especially pronounced.

Maps 4-10 and 4-11 show the locations of bicycle and pedestrian crashes within the AMATS area between 2021 and 2023.

Goals and Strategies

The ATP provides numerous goals and strategies that support the vision of safe and comfortable places that matter. Goals are divided into two types:

- *Infrastructure-related*—Six goals and 13 strategies focused on how to build a better active transportation network. All these goals and strategies are project focused. They include building additional shared-use paths, bike lanes, and sidewalks, focusing specifically on safety, maintaining pavement conditions in a good state of repair, and creating environments more conducive to active transportation.
- *Outreach and Engagement-related*—Four goals and nine strategies focused on planning and promotion of active transportation. These goals and strategies are activity focused and many of them can be done without a monetary cost. Spreading awareness, educating citizens, and promoting various initiatives related to active transportation modes; and encouraging transit ridership through active transportation options are key points.

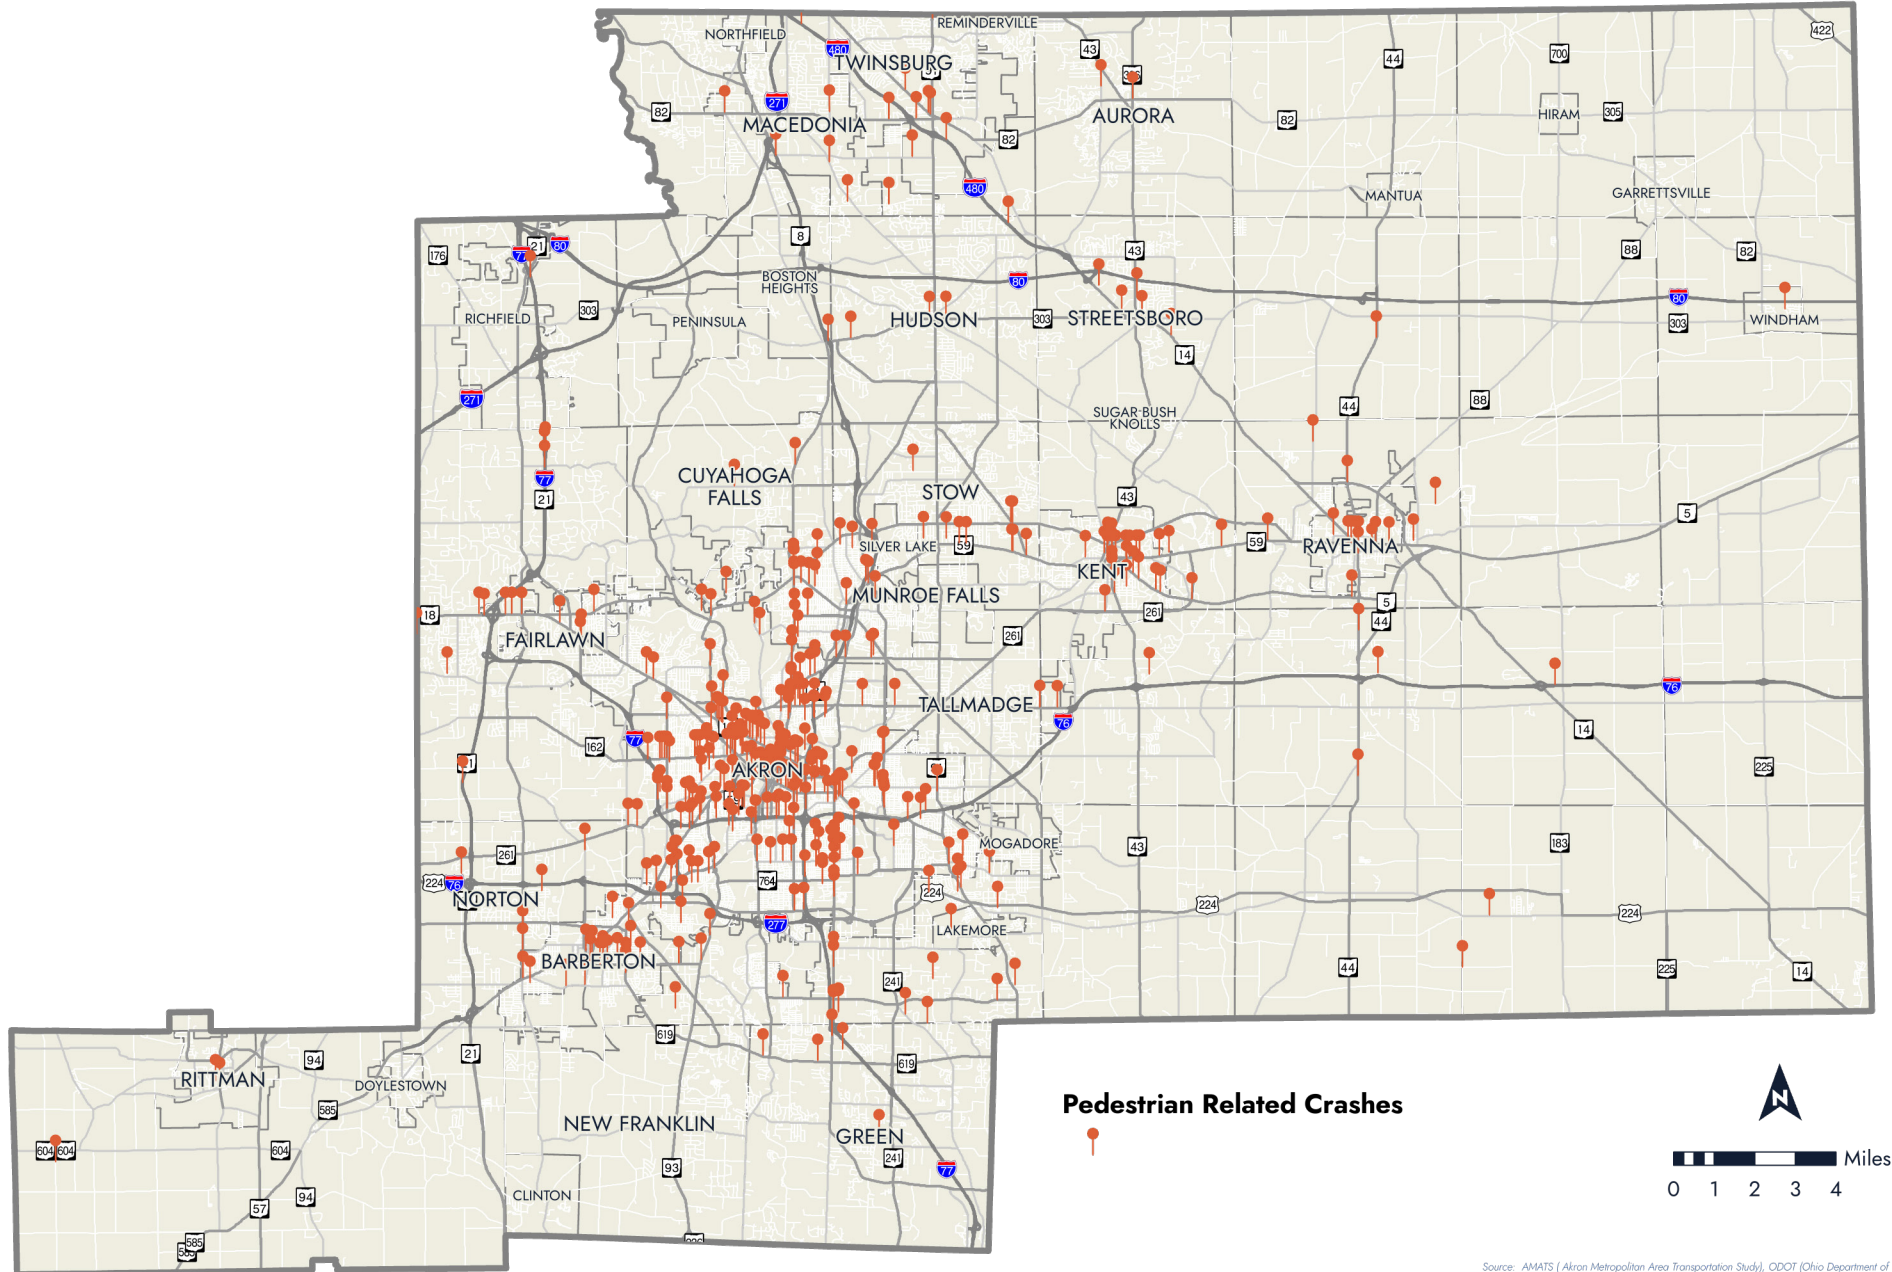

A matrix outlining and describing each of these goals and strategies, who can implement them, and how they get implemented, can be found in [Chapter 10 \(pages 40-41\) of the ATP](#). The ATP can be reviewed in its entirety at: <https://www.amatsplanning.org/sites/default/files/docs/reports/2024%20Active%20Transportation%20Plan%20%28ATP%29.pdf>

Public Transit

AMATS is responsible for ensuring comprehensive transportation planning for Summit and Portage counties and parts of Wayne County. This responsibility includes coordination with various agencies in Northeast Ohio, including two transit providers, METRO RTA in Summit County and the Portage Area Regional Transportation Authority (PARTA) in Portage County. The portions of Wayne County in the AMATS region are currently not served by a public transportation provider.

Existing System Coverage and Performance

Providing a strong and efficient transit system is essential for a dynamic region preparing for the future. METRO RTA and PARTA both provide traditional fixed-route service, operating a combined 39 routes. Both transit agencies also provide demand response services to seniors, individuals with disabilities and workforce trips with smaller buses and vans that operate as complementary service to fixed route service. METRO RTA operates primarily in Summit County with regional connections to Brimfield and an express route into downtown Cleveland. PARTA operates primarily in Portage County, with an express route that serves downtown Akron and Cleveland.

METRO RTA

Fixed Route Service

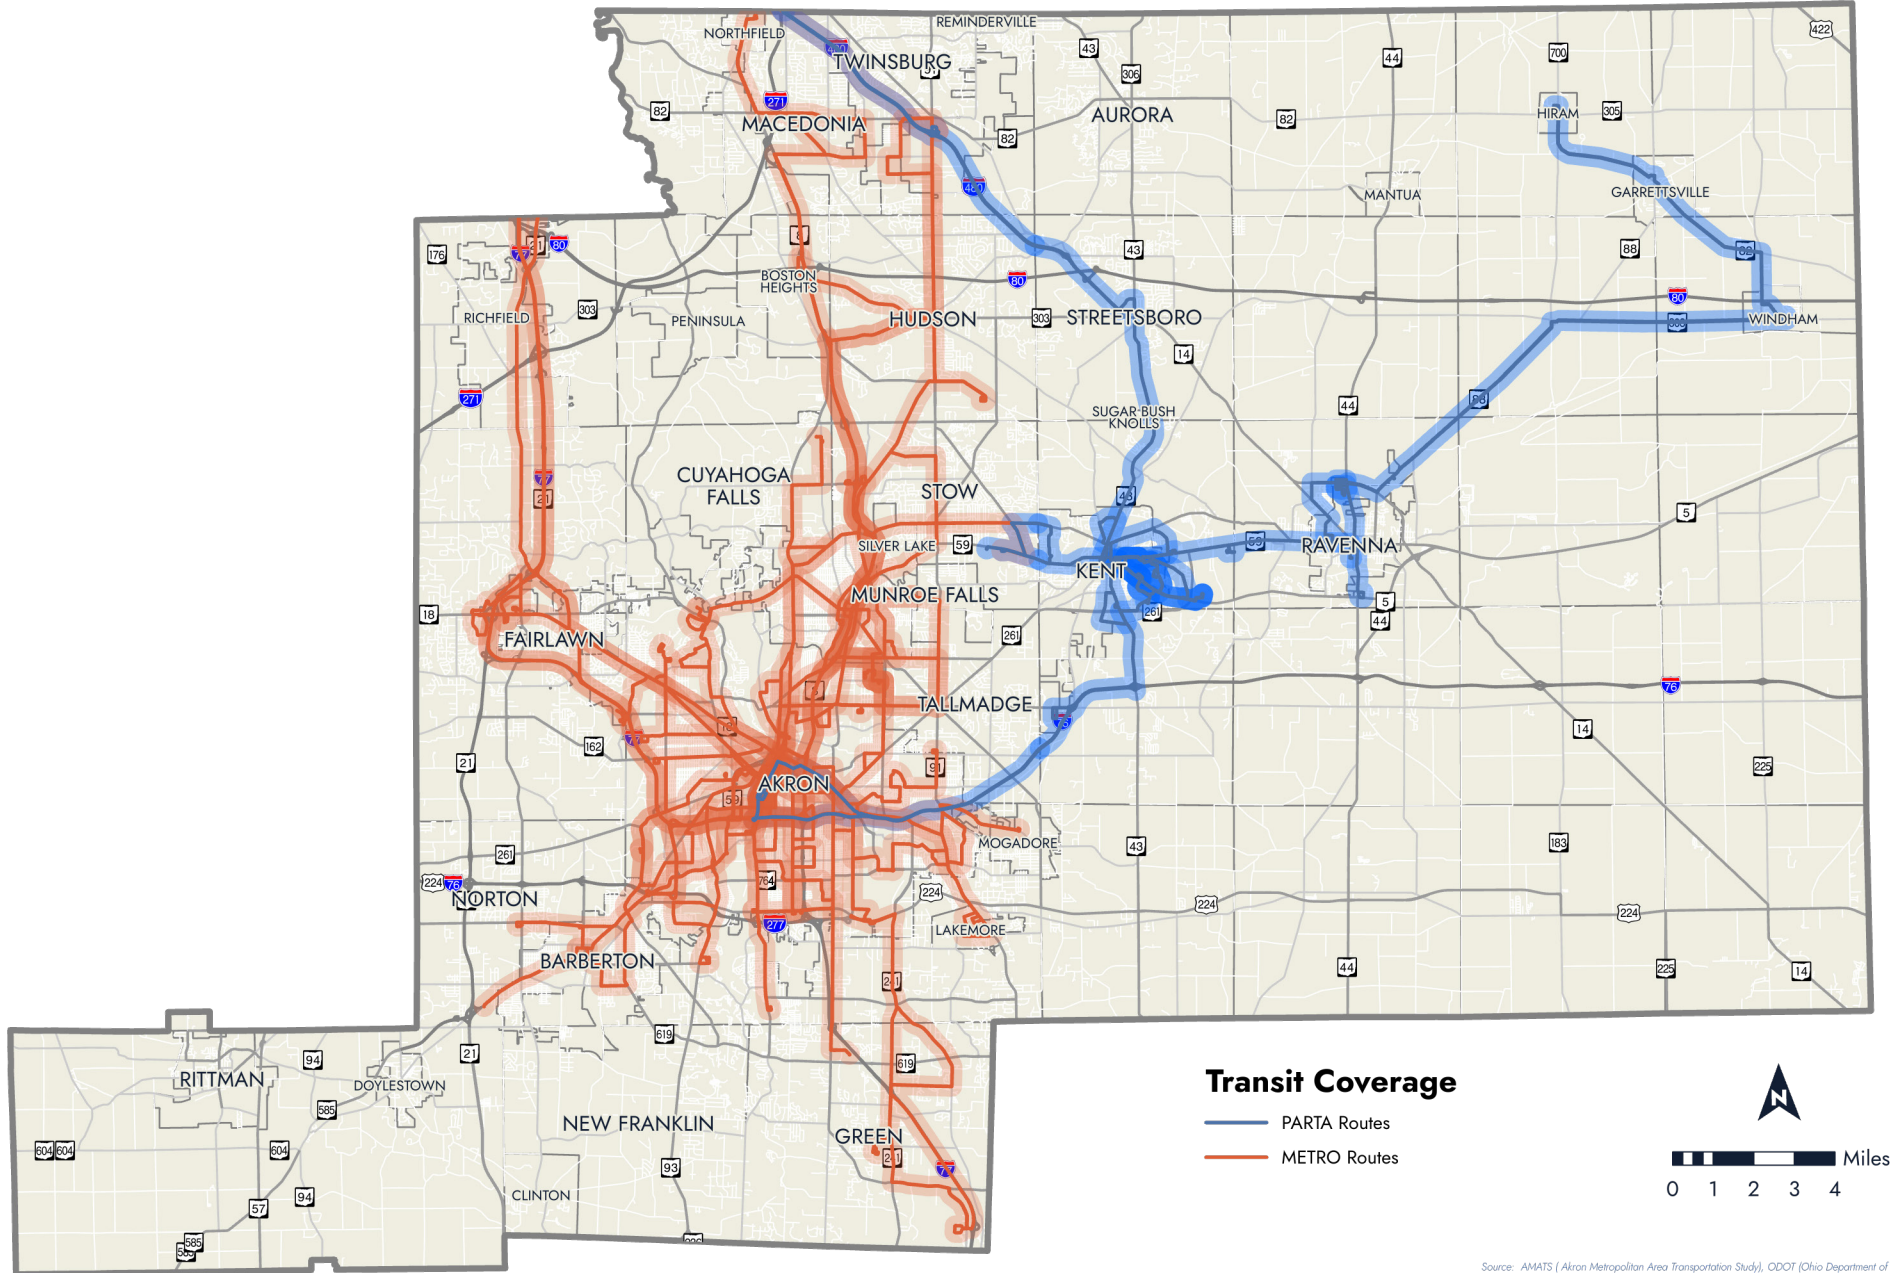

METRO RTA updated their fixed route system in 2023, mainly to account for new travel patterns and to increase efficiency. METRO RTA operates fixed route service from the Robert K. Pfaff Transit Center located just south of downtown Akron, which consists of 24 fixed routes with the following key features: 1) five high-frequency 15 minute corridors and eight 30 minute routes, 2) streamlined service with increased route directness and more consistent weekend service, and 3) additional regional connections to Brimfield and Cuyahoga County and an express route to downtown Cleveland.

Demand Response Service

METRO's demand response services operate multiple programs including METRO ADA and Select.

- **METRO ADA:** Complementary Americans with Act (ADA) service for eligible persons with disabilities. Service is available at the same times as METRO fixed route service, with the pick-up location and destination no further than 3/4 of a mile from a fixed route. **METRO Select:** involves a variety of services based on qualifying factors.
- **METRO SCAT Service** for seniors and people with disabilities who live outside the ADA zone and qualify for service. Trips also include coordination and provision of transportation services for Medicaid eligible residents Non-Emergency Transportation (NET) trips to Medicaid eligible medical facilities, as well as Title III trips for eligible Direction Home (Area on Aging and Disabilities) participants. **METRO Call-A-Bus** zones is a workforce development program for making suburban connections that are difficult for fixed route to adequately serve. Areas include Macedonia, Twinsburg, Townships of Sagamore Hills, Twinsburg, and Northfield Center and the Villages of Northfield and Reminderville, or riders within the City of Green.

Map 4-12 | Transit Coverage

Ridership

METRO's fixed route ridership exhibited a significant decrease beginning in 2020 coinciding with the COVID-19 pandemic and reached its lowest point in 2021 at 53% of pre-covid (2019) ridership performance. Overall ridership showed a steady recovery and as of 2023 was at 74% of pre-covid boardings which mirror similar trends of mid-size transit agencies nation-wide. METRO's ridership has recovered to previous levels and in some areas have exceeded 2019 level ridership.

PARTA

Fixed Route Service

PARTA's fixed route service operates two divisions, county and campus. County service offers 10 fixed routes with the highest frequency route operating every 30 minutes. County routes operate Monday through Saturday with express service to Akron and Cleveland operating Monday through Friday. PARTA also has a contract with Kent State University to operate campus service. Campus service consists of 5 fixed routes with frequencies ranging between 9 and 15 minutes, Monday through Friday, and reduced service on Saturday and Sunday. PARTA offers complementary ADA paratransit service for individuals with disabilities whose pick-up location and destinations are no more than $\frac{3}{4}$ of a mile from a fixed route.

Demand Response Service

PARTA's ADA demand response service is available at the same time as PARTA's fixed route service, with the pick-up location and destination no further than $\frac{3}{4}$ of a mile from a fixed route. PARTA's door-to door, dial a ride service (DART) operates Monday through Friday, 5:00 a.m. – 11:00 p.m. and Saturday, 8:00 a.m. – 7:00 p.m. Demand response service covers all of Portage County; however, some townships are limited to certain days of the week. For those who qualify, PARTA provides Title III trips for Direction Home (Area Agency on Aging and Disabilities).

Ridership

PARTA's fixed route ridership dipped to their lowest point in 2021 which accounted for 32% of pre-covid ridership. Ridership showed an increase to 54% in 2022 and reached 80% of pre-covid levels by 2023 and reached a full recovery as of 2024. This loss and recovery of ridership mirrored the same trend of other local agencies and national trends.

Capital Assets and Facilities

METRO has an active fleet of 222 vehicles comprised of 131 Large Fixed Route CNG and Electric buses and 91 Demand Response CNG/Electric/Gas/Diesel fuel vehicles. METRO's fleet is varied and includes 60-foot articulated, 40-foot CNG, electric, and 40-foot hybrid buses. Smaller vehicles including less than 30-foot gasoline and electric buses and transit vans for demand response services. All METRO fixed route buses are equipped with bike racks and all revenue vehicles are handicap accessible. METRO has multiple facilities including their maintenance and operations buildings as well as a public compressed natural gas (CNG) station located at 416 Kenmore Blvd. METRO fuels all vehicles gasoline, CNG and electric vehicles at their 416 Kenmore Blvd. facility. All of METRO's fixed route buses start and end their trips at their downtown Akron facility, the Robert K. Pfaff Transit Center located at 631 South Broadway. This is the main transit center for all METRO Fixed Route Buses and Connections with PARTA, SARTA and Greyhound services. METRO has two smaller transit centers. The Romig road transit center, located in the Amazon fulfillment center, 2450 Romig Rd. Akron, OH. which currently serves routes #3 and #9. Independence Transit Center, located on Independence Ave, across

from the old Chapel Hill mall which serves Routes #10, #19, #20 and #22. METRO also maintains two park and ride facilities; James L. Fisher Park and Ride at 499 Ghent Road, Akron, which serves the #X61 Express to Cleveland and the METRO RTA & ODOT Park and Ride Lot located at RT.303 and Chittenden Road which serves the #31 and a place for car-pool Rt. 8 travel.

PARTA deploys an overall active fleet of 62 vehicles. Of the total fleet, 31 large-40-foot buses (16 CNG and 15 Diesel and 3 small buses/light transit vehicles-LTVs) are used for PARTA's fixed route service. Additionally, PARTA has 23 Light Transit Vehicles (LTVs) and 5 vans/small transit vehicles (STVs) that provide demand response service all of which are gasoline fueled vehicles. All PARTA's large, fixed route buses are equipped with bike racks and all revenue vehicles are handicap accessible. PARTA's administration, CNG fueling station, maintenance, storage and washing bay facilities are located at 2000 Summit Road in Kent. PARTA's Kent Central Gateway, a multi-modal transportation facility in the heart of downtown Kent, offers a central point of operations for transportation in Portage County, in addition to a secondary hub at University Hospitals in Ravenna.

Challenges facing public transit

Aging of America: More elderly individuals will be looking for affordable demand response public transportation service to help age in place and promote more active lifestyle for the aging demographic.

Increased Cost of Transit Service: For all transit authorities costs of goods and services are on the rise and the need to maintain a state of good repair has become more difficult.

Understanding and adjusting to the workforce needs of the area: In general, transit authorities need to understand current workforce trends in the area in order to best maximize service.

Specific investment in TOD/BRT and need for increased local funding to support operations: Transit-Oriented Development (TOD) refers to the planning and development of transit-oriented communities that integrate housing, businesses, and amenities around transit stations, promoting walkability and ensuring easy access to transit stations on foot through well-designed pedestrian pathways. Current examples: Kent Central Gateway project being located downtown Kent in an area of growing mixed-use development. As well as, the Reimagining the Gateway, E. Main Street project is a City of Kent, Kent State University, ODOT, AMATS, and PARTA collaboration to make the most heavily used PARTA transit block safer, walkable and more accessible for all users. Bus Rapid Transit (BRT) is an advanced, high-quality transit system that delivers safe, fast, and comfortable service. Improvements typically found within BRT routes include fewer stops, traffic signal priority, off-board fare collection, and elevated platforms which create a better trip experience compared to typical bus service. AMATS supports investment in a corridor for Bus Rapid Transit service on high METRO ridership routes.

Areas that are currently not served by transit: While METRO and PARTA strive for continuous improvement in meeting the needs of all riders, it is not currently economically or logistically feasible to offer fixed route line service throughout all neighborhoods within each of their counties. Local municipalities who are currently underserved or not served need to voice their concerns to their respective transit authorities about potential transit coverage. Finally, even in areas where fixed route coverage exists, there are additional gaps created when the sidewalk infrastructure does not fully and safely connect destinations and bus stops.

Goals and Strategies

The 2024 Transit Plan provides numerous goals and strategies that support the vision of safe and convenient transit operations. Goals are divided into three types:

- *Collaboration-related*—Two goals and five strategies focused on improving upon the already positive partnerships between transit operators, AMATS, community officials, private developers, and other organizations.
- *Funding-related*—Every goal (7) within the Transit Plan relates to funding directly or indirectly. These goals outline various strategies to invest in a modern fleet, seek funding opportunities, optimize service, and improve the built environment to make transit more accessible.
- *Service-related*—3 goals and five strategies are related to improving transit services. Many significant improvements to both METRO'S and PARTA'S service have recently occurred, but both operators are committed to continuing to improve services through ever changing needs and by utilizing beneficial technologies.

The AMATS 2024 Transit Plan can be viewed by visiting:

https://www.amatsplanning.org/sites/default/files/docs/reports/2024%20Transit%20Plan_0.pdf

Rail

Classification and Overview

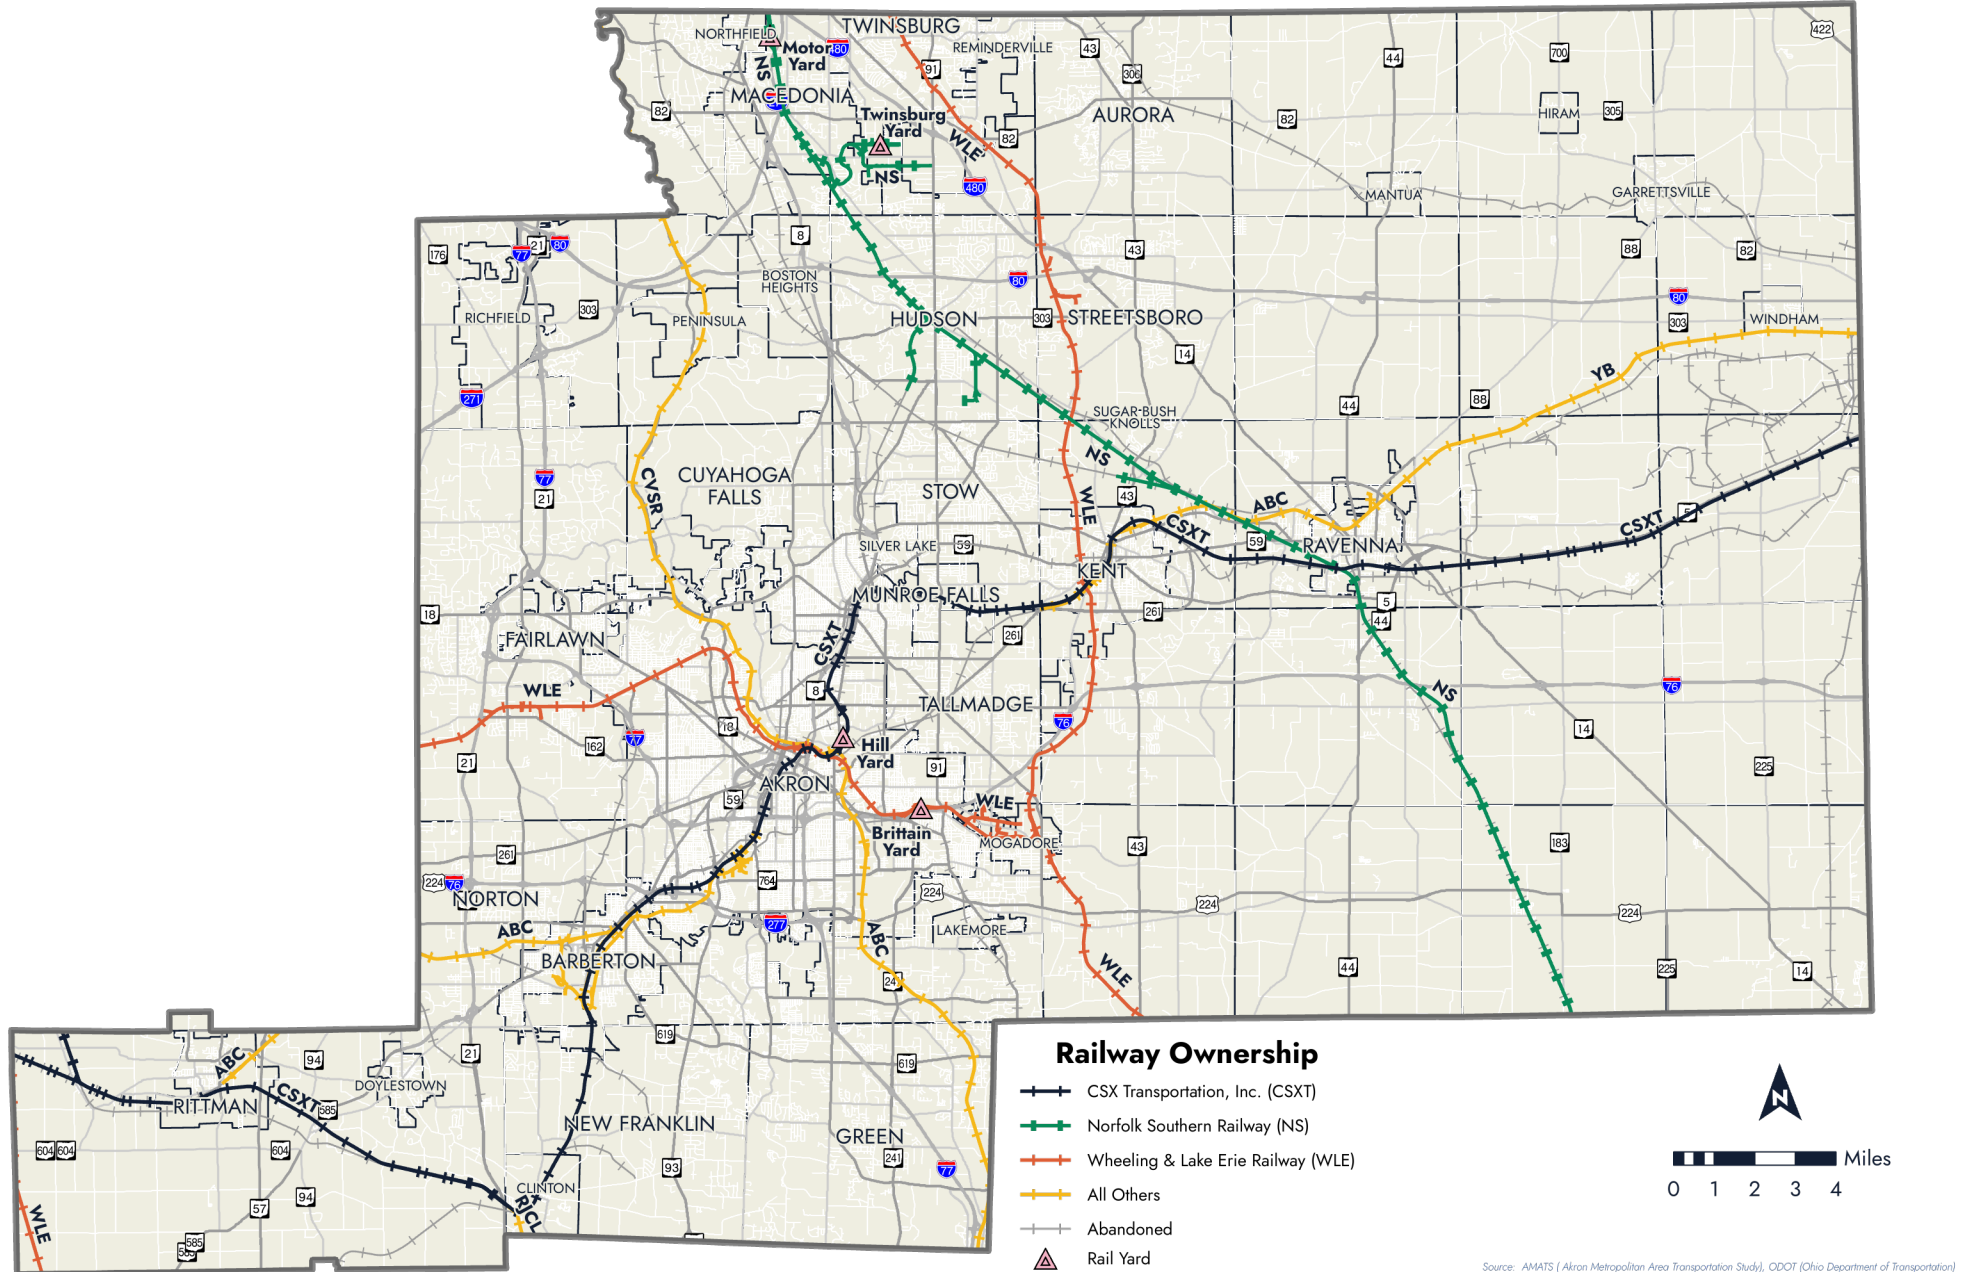

The level of importance of rail to the AMATS area transportation system is reflected by the concentration of rail lines within the area. The high mileage of rail lines reflects the close integration of rail with the area's economic activity. Although rail volumes and tonnage of freight moved are less than the Akron area's historical peak, the movement of goods by rail remains important to the economy.

Northeast Ohio contains heavily utilized rail routes between Chicago and the US East Coast ports. Northeast Ohio serves as a hub where freight moving east from Chicago can be redirected toward New York, Philadelphia, Baltimore, and Virginia. The rail lines which see heavy traffic are operated by Class 1 carriers Norfolk Southern (NS) and CSX Transportation. The region contains one Class 2 and one Class 3 railway, the Wheeling & Lake Erie Railway (WLE) and Akron Barberton Cluster (ABC), respectively.

The only passenger rail within the AMATS region is along the Cuyahoga Valley Scenic Railway (CVSR), which provides service from downtown Akron, through Peninsula, and into Cuyahoga County. The feasibility of extending the CVSR northward into downtown Cleveland is being discussed by various Cleveland area stakeholders. However, any future expansion would not affect the AMATS planning area other than the possibility of expanded/more frequent service.

Map 4-12 shows the region's rail network.

Map 4-13 | Railway Ownership

Rail Safety

There are numerous active rail lines that pass through the AMATS planning area, all of which enter heavily populated cities such as Akron, Ravenna, Barberton, and Kent. Whether it's potential conflicts between trains and vehicles, or the safety of the trains themselves (prevention of derailments and preparedness for when disaster strikes), safety is an important consideration for rail issues.

Highway Rail Grade Crossings

There are nearly 400 at-grade crossings within the AMATS region, although many of these exist along abandoned or out of service rail lines. At-grade crossings are protected either by train-activated, active warning devices (such as gates and flashing lights) or by passive warning devices (such as crossbucks, stop signs, and yield signs). Trains often require a mile or more to stop and are unable to deviate from their path. Consequently, safety at grade crossings is primarily a motorist's responsibility.

Ideally, highway-rail grade crossings would be separated if feasible. Grade separation projects eliminate safety and delay concerns by redirecting the vehicle, pedestrian and bicycle traffic above or below the railroad tracks. Construction of overpasses and underpasses is costly and sometimes infeasible due geographic configurations.

In the *2024 Freight Plan*, high-volume at-grade crossings in the AMATS area were evaluated. At-grade crossings are prioritized by scoring the number of trains per day and the daily traffic volume (ADT). Table 4-4 provides a ranking of high-volume at-grade rail crossings. The #6 ranked location—Hines Hill Road in Hudson—already has funding in place to eliminate the at-grade crossing by constructing an overpass over the NS rail line. Map 4-13 shows each rail crossing within the AMATS area, highlighting the high-volume crossings.

Table 4-4 High-Volume At-Grade Rail Crossings				
RANK	STREET	TRAINS PER DAY	VEHICLE ADT	SCORE
1	Stow Rd (Hudson)	45	10,257	462
2	N Main St (Munroe Falls)	27	15,580	421
3	Broad Blvd (Cuyahoga Falls)	32	12,872	412
3	Twinsburg Rd (Macedonia)	74	5,573	412
5	Bailey Rd (Cuyahoga Falls)	27	12,716	343
6	Hines Hill Rd (Hudson)	62	4,035	250
7	Summit St (Kent)	27	8,304	224
8	Fairview Ave (Barberton)	38	5,211	198
9	Snyder Ave (Barberton)	32	5,395	173
10	W Waterloo Rd (Barberton)	31	5,558	172
11	SR 183 (Atwater Twp)	45	3,800	171
12	N Arlington St (Akron)	27	5,838	158
13	Lynn Rd (Rootstown Twp)	62	2,328	144
14	E Highland Rd (Twinsburg Twp)	10	10,799	108
15	S Main St (Rittman)	27	3,851	104

Map 4-14 | High-Volume At-Grade Crossings

Source: AMATS (Akron Metropolitan Area Transportation Study), ODOT (Ohio Department of Transportation)

Rail Safety and Emergency Preparedness

The 2023 Norfolk Southern train derailment in East Palestine, Ohio was a wake-up call for communities across the country, but the event had significant meaning for the Greater Akron area given its proximity. In fact, the train that ultimately malfunctioned and derailed had passed through the region just a couple of hours before. The incident not only highlighted the need for safe trains, but also for emergency preparedness.

Within the AMATS planning area, emergency management agencies (EMAs) are coordinated at the county level. Countywide EMAs prepare Emergency Operations Plans (EOPs), which are collaboratively developed between county EMAs and the political subdivisions within each county. The EOPs detail plans and procedures for mitigating, preparing for, responding to, and recovering from disasters such as train derailments, hazardous material spills, and other accidents.

Rail and Congestion

Congestion on rail lines not only inhibits the movement of freight; it also poses a safety and traffic congestion problem when stopped or slowed trains block at-grade crossings in the area. Safety vehicles (police, fire, ambulance) are required to drive around blocked at-grade crossings to reach their destination. Moreover, longer train lengths—regardless of speed—can exacerbate roadway congestion issues occurring because of at-grade crossings. Rail congestion can also be caused when higher-traffic double-track rail lines consolidate to single-track runs.

Contrary to focusing on the congestion on railways, rail can help to alleviate highway-related congestion. Rail diverts freight and, in some cases, people from trucks and automobiles on roadways. During peak travel times and especially on high tuck freight corridors, transporting goods and people by rail has the potential to significantly reduce congestion.

Expanded Passenger Rail Opportunities

Intercity Rail

In 2022, as part of the Infrastructure Investment and Jobs Act (IIJA), funds were awarded to study intercity passenger rail corridors through the Federal Railroad Administration. Intercity rail is defined as rail that connects cities over longer distances than regional or commuter rail. Three Ohio corridors received funding through the Ohio Department of Transportation (ODOT) for study, including the Cleveland-Columbus-Dayton-Cincinnati (3C&D) Corridor, Cleveland-Toledo-Detroit Corridor, and Chicago, Fort Wayne, Columbus, and Pittsburgh. These corridors do not include any rail stops in the greater Akron region.

In June 2024, the Ohio Congressional Delegation wrote a letter to ODOT, requesting that the Akron-Canton area be included as part of any corridor study that the agency conducts. ODOT's response stated that adding the Akron-Canton region to the existing corridors was not feasible due to cost, projected travel time increases, additional mileage, and inadequate existing rail facilities to support intercity passenger rail and therefore could not be added to the corridors under consideration.

Discussions continued to determine appropriate next steps with regards to intercity passenger rail. The AMATS Policy Committee discussed the issue and asked AMATS staff to develop a resolution outlining AMATS support for the following:

- Intercity passenger rail coming to the greater Akron region, and an acknowledgement of this support in TO2050
- local efforts to develop a long-term strategy for intercity passenger rail in greater Akron that connects to an expanded rail network
- local efforts to secure future grant opportunities for the study of intercity passenger rail in greater Akron that connects to an expanded rail network

This resolution was approved in February 2025.

Many stakeholders within the region acknowledge the high cost and geographic difficulty of connecting the Akron region into a broader passenger rail network. Efficient passenger rail travel would most likely have to be located along either a new rail line right-of-way—currently a near impossibility—or, more likely, along an existing Class 1 railroad. These railroads are privately owned (CSX and NS) and prioritize their own freight traffic over separately coordinated passenger service, which itself is a serious challenge to convenient and reliable passenger rail service.

Other options include utilizing existing or abandoned Class 2 or Class 3 rail lines. A detailed feasibility study of doing this has not been performed for several decades, but aging rail infrastructure and the lower operational speed of trains on these railroads serve as challenges to this approach.

It is important to note that no funding has been assigned to the implementation of passenger rail on any alignments. ODOT has only committed to studying intercity passenger rail in three locations across Ohio. These studies will help to determine the feasibility and potential costs of bringing long-distance passenger rail between cities.

Aviation

Aviation and the state of Ohio have a longstanding and important relationship. Statewide, Ohio is served by seven commercial service airports and 97 general aviation airports. Aviation enables people and goods to move at regional, national, and even international levels. Modern and well-planned airports can enhance a region's economic competitiveness, provide jobs, and allow convenient transportation options for people and goods.

The Greater Akron area has one commercial airport. The Akron-Canton Airport (CAK) in the City of Green provides direct service to other markets, filling a niche as a more convenient reliever airport for larger airports, such as the Cleveland-Hopkins International Airport (CLE) in neighboring Cuyahoga County. CAK transported over 750,000 passengers in 2024 and 231,000 tons of cargo in 2022. Like many airports, CAK experienced substantial passenger service growth and subsequent decline over the past 20 years. CAK also underwent significant capital expansion during this same timeframe, including a new terminal expansion and renovation.

The region also contains three general aviation airports. Non-commercial, or general aviation, airports are classified into four categories by the Federal Aviation Administration. Classifications are based upon the size of the aircraft able to utilize each airport (Class 1 = largest; Class 4 = smallest), and each classification comes with its own requirements regarding configuration, snow and ice removal, lighting, training, inspections, personnel, and many other factors.

- The Akron Fulton Airport in Akron—Class 1
- The Portage County Airport in Shalersville Township—Class 2
- The Kent State University Airport in Stow—Class 3

Map 4-14 shows the location of the Greater Akron region's four airports. Numerous privately-owned landing strips exist throughout the region, usually in rural areas, to accommodate hobbyist pilots. All airports, including the private landing strips are shown on Map 4-5 in Appendix D.

Tying it All Together—Context Sensitive Solutions

All modes of transportation are important, and every place contains a set of unique considerations. Changing built environments to make all modes of transportation more appealing and accessible through sound land use practices and roadway design is at the core of AMATS' efforts. AMATS strongly urges area communities to consider the individual context of each place and how and to what degree various modes of transportation should be accommodated.

All users, regardless of age or ability, should be able to reach their destinations along or across public streets safely and comfortably. Certainly, not every street can offer access to every possible mode of transportation. However, the Greater Akron area should strive to have a network so that all modes serve all general areas, particularly those of strong attraction to non-motorized transportation, such as schools, parks, hospitals, key transit nodes and areas where dense residential uses are proximate to commercial/retail districts.

Complete Streets

Sometimes this concept of designing a transportation network to accommodate all users is referred to as *Complete Streets*. AMATS officially endorsed Complete Streets concepts and design through its Connecting Communities initiative that was launched in 2010. This initiative stresses the importance of integrating land use and transportation, and encourages communities to consider broadening their perspectives to include all potential modes of transportation in their transportation and development planning. It also aims to encourage transportation projects which support vibrant, healthy and inclusive places.

The Connecting Communities initiative was, and continues to be, implemented through the Connecting Communities Planning Grant program, to address specific transportation and land use challenges unique to an area. The program also includes the principles of Connecting Communities to develop transportation plans that will lead to projects eligible for AMATS funds. The Connecting Communities Planning Grant program focuses on integrating the following Connecting Communities principles:

- Increase alternative transportation options to connect people and places
- Promote Complete Street principles to create vibrant and safe places for all users
- Leverage transportation projects to develop places which support alternative transportation and complete streets through land use and design

Although no official Complete Streets policy exists for the region, AMATS has adopted and implemented Complete Streets principles throughout the Greater Akron area. AMATS Funding Policy Guidelines specify that any AMATS member applying for federal transportation funding shall consider the needs, safety and comfort of all current and anticipated users regardless of their preferred mode of transportation in the design of all proposed projects. In recent years, AMATS has provided significant funding for sidewalks, bicycle lanes, trails, transit improvements and related improvements.

Context Sensitive Design

Although AMATS strongly encourages communities to consider all modes of transportation as they plan projects, community leaders ultimately make decisions on what kind of community they want to be. In many communities,

previous planning processes such as comprehensive plans provide the vision for what the community will look like in the future. This planning is typically contingent upon outreach to its residents.

Context is important when determining the specific considerations of how a project is designed and built. Project decisions involve a series of tradeoffs. A few examples:

- Wider or additional lanes may ease congestion, but they typically increase vehicle speeds, potentially creating new safety issues and making the road less accessible for active transportation modes. What is most important to a community?
- The radius of corners at an intersection can be designed to accommodate larger trucks, but doing so increases the length of crosswalks for pedestrians. Quiet, residential streets may not need to design for the movement of large vehicles, but streets accessing an industrial park probably would consider the ease of freight movement.
- High quality transit amenities are desirable anywhere buses travel, but with limited resources, should deluxe shelters be prioritized in areas with the highest ridership?
- Bike lanes and sidewalks are an important and popular addition to many roadways, but does a lower-volume, rural roadway disconnected from shared-use paths warrant the extra cost of constructing these amenities?

Section 5 | System Performance: Transportation Performance Measures

Introduction

Current federal legislation and guidance feature an emphasis on performance measurement. This focus is consistent with AMATS goals and objectives, which promote the transparency of public data and decision-making and seeks to improve the accountability of public spending by better linking investments to outcomes.

Performance measures are central to implementing a Performance Based Planning Process (PBPP) that guides decision making. How performance is defined and measured can significantly affect the types of projects and strategies that are advanced by decision makers. Moreover, performance results inform agencies whether the types of projects and strategies they are implementing are in fact helping them achieve their goals. Performance measures aim to answer questions about whether the performance of the transportation system is getting better or worse over time. Performance measures also aim to demonstrate whether transportation investments are correlated or linked to stated goals and whether they produce desired outcomes.

Introducing a performance management approach to planning is intended to improve project and program delivery, inform investment decision making, focus staff efforts on priorities, and provide greater transparency and accountability to the public. Current federal guidelines apply performance measurements at the programmatic, rather than project level and link performance measures and targets to funding decisions by way of performance-based funding. The purpose of this approach is to move towards performance-based decision-making for project selection in the future.

The US DOT and ODOT continue to develop performance targets in consultation with MPOs like AMATS, and others. State investments must make progress toward these performance targets, and MPOs must incorporate these performance measures and targets into their Transportation Improvement Programs (TIPs) and long-range Regional Transportation Plans. Federal guidance imposes financial penalties on states that fail to make progress toward these performance goals.

There are seven areas for which the US DOT has established national performance goals. These areas are:

- Safety
- Infrastructure Conditions
- Congestion Reduction
- System Reliability
- Freight Movement and Economic Vitality
- Environmental Sustainability
- Reduced Project Delivery Delays

To implement performance measure goals, US DOT has developed measures and minimum standards for states to follow. In the transportation planning process, the public and other stakeholders articulate a strategic direction that is based on a shared vision for the future.

- Goals and Objectives stem from the area's vision and goals, and they address key desired outcomes. Agencies like AMATS create objectives—which are specific, measurable statements—that shape planning priorities.
- Performance Measures support objectives and are the basis for comparing alternative improvement strategies, investment and policy strategies, and tracking results.

Driven by data on performance, along with public involvement and policy considerations, AMATS conducts analyses that inform investment and policy priorities.

- Identify Trends and Targets – Trends and targets let agencies compare alternative strategies. This step relies on baseline data from past trends, tools to forecast future performance, and information on possible strategies, available funding, and other constraints.
- Identify Strategies and Analyze Alternatives –Scenario analysis may also be used to compare alternative strategies and funding levels, or to explore funding levels required to achieve certain performance goals.
- Develop Investment Priorities – To reach investment targets, AMATS will create a TIP and a Regional Transportation Plan that consider priorities and tradeoffs.

Programming involves selecting specific projects to include in the TIP. In a performance-based planning approach, agencies make programming decisions based on whether those decisions support performance targets or contribute to desired trends.

Performance based planning is founded on evidence that the process leads agencies to their goals. The following evaluation activities happen throughout implementation and when needed throughout performance-based planning.

- Monitoring – Gathering information on actual conditions.
- Evaluation – Conducting analysis to understand whether implemented strategies have been effective.
- Reporting – Communicating information about system performance and whether policymakers, stakeholders, and the public think plans and programs are effective.

In a performance-based planning approach, each step in the process is clearly connected to the next so that goals translate into specific measures. Those measures then become the basis for selecting and analyzing strategies for the long-range plan. Ultimately, project selection decisions are influenced by expected performance returns. Keeping the next step in the process in mind is critical to each step along the way.

The Ohio Department of Transportation (ODOT) has provided a complete overview of performance measures, data and progress with its report, *The State of Ohio Transportation System Performance*:

www.transportation.ohio.gov/programs/statewide-planning-research/statewide-transportation-planning/01-transportation-system-performance-report

Tables 5-1 and 5-2 summarize highway and active transportation project funding by performance group category for Transportation Outlook 2050. These tables include only the designated/specific projects outlined in Section 6, and not smaller system-preservation projects, e.g. road resurfacing, yet to be determined.

Table 5-1 | Highway Project Performance Measures

Freeway and Roadway Recommendations	Recommendation	From	To	Current Cost	PM1	PM2	PM3
	I77/SR8 Corridor Improvements	Lovers Lane	Perkins St	(\$77,000,000)	✓	✓	✓
	I-76 "Kenmore Leg" Improvements to increase capacity and improve safety	I-76 @ I-277 Ramp	North of I-76 @ I-77 ramp	(\$86,000,000)	✓	✓	✓
	Roundabout (or other intersection improvements)	Glenwood Ave. @ N. Howard St.		(\$3,000,000)	✓	✓	✓
	Misc. Improvements, new street connections and placemaking along former/current freeway	Innerbelt Vicinity (Exact Locations TBD)		(\$20,000,000)	✓	✓	✓
	Rand and Dart Avenue Road reconfigure/function	Boulevard Street	W. Market Street	(\$12,000,000)	✓	✓	
	Phase 1 W. Exchange St. Complete Streets and Reconstruction	Jefferson Ave.	Portage Path	(\$4,700,000)	✓	✓	
	Phase 2 W. Exchange St. Complete Streets and Reconstruction	Clemmer Ave.	Jefferson Ave.	(\$5,000,000)	✓	✓	
	Phase 3 W. Exchange St. Complete Streets and Reconstruction	S. Hawkins Ave.	Clemmer Ave.	(\$5,000,000)	✓	✓	
	Merriman Rd. corridor Improvements including road diet/complete streets, poss. roundabout(s)	west of Weathervane Pl.	Portage Path	(\$18,000,000)	✓	✓	✓
	Left Turn Lane at Intersection	SR 43/Chillicothe Rd. @ Kingston Dr.		(\$2,500,000)			✓
	Intersection Improvements	SR 43/Chillicothe Rd. @ S. Mennonite Rd.		(\$2,500,000)	✓	✓	✓
	Intersection Improvements	Bissell Rd. @ Pioneer Trail		(\$2,500,000)	✓	✓	✓
	Intersection Improvements	Mennonite Rd. @ Page Road		(\$2,500,000)	✓	✓	✓
	Robinson Rd. Road Diet, Reconstruction, Safety Upgrades, Ped. Improvements	Wooster Rd. North	Van Buren Ave.	(\$6,600,000)	✓	✓	
	Peanut Roundabout	Wooster Rd. North @ Norton Ave. & nearby streets		(\$6,800,000)	✓	✓	✓
	Signal Improvements	Olde Eight Rd. @ SR 303/Streetsboro Rd.		(\$300,000)			✓
	State Rd. Improvements	Bridge Over Cuy. River	Portage Trail	(\$20,000,000)	✓	✓	✓
	S. Bailey Road Improvements including streetscaping, Complete Streets, enhancements at Northmoreland Rd.	200' south of Northmoreland Rd.	Myrtle Ave.	(\$4,000,000)	✓	✓	✓
	Intersection Improvements, Possible Roundabout	Riverview Rd. @ Ira Rd.		(\$2,500,000)	✓	✓	✓
	Steels Corners Widening and Shared-Use Path	State Rd.	Eastern Corp Limits	(\$9,000,000)	✓	✓	✓
	Steels Corners Bridge Replacement	Over Mud Brook		(\$20,000,000)		✓	
	W. Market St. Corridor Safety Improvements and Reconstruction	Springside Dr.	N. Revere Rd.	(\$24,000,000)	✓	✓	✓
	Massillon Road Improvements (TWLTL)	Greensburg Rd.	Wise Rd.	(\$4,000,000)		✓	✓
	Roundabout (or other intersection improvements)	SR 619/E. Turkeyfoot Lake Rd. @ S. Main St.		(\$2,500,000)	✓	✓	✓
	Roundabout (or other intersection improvements)	SR 619/E. Turkeyfoot Lake Rd. @ Mayfair Rd.		(\$2,000,000)	✓	✓	✓
	SR 303/W. Streetsboro Rd. Intersection Safety Improvements	Nicholson Dr.	Boston Mills Rd.	(\$1,000,000)	✓	✓	
	SR 91 TWLTL	Middleton Road	Northern Corp Limits	(\$4,000,000)	✓	✓

	Park Loop Trail	Center Valley Bikeway	Center Valley Bikeway	\$1,380,000	✓		

Safety – PM1

23 CFR 490.207 requires states to establish five safety performance measures and set targets for those measures to demonstrate fatal and serious injury reductions on all public roads. The figure below shows the safety performance measures, baselines, and targets. These measures are evaluated on a 5-year rolling average. Safety performance measures are designated as category 1: PM1.

Federal legislation requires MPOs like AMATS to establish performance targets and set targets that demonstrate fatal and serious injury reductions on all public roads. The required performance measures for safety are:

- Number of fatalities
- Fatality rate
- Number of serious injuries
- Serious injury rate
- Number of non-motorized fatalities and serious injuries

In accordance with federal legislation, ODOT used a five-year average to calculate baseline safety statistics. These baseline figures are the benchmarks to which all future calculations will be compared. All future values will also be calculated using five years of data. This five-year rolling average is used to smooth out short-term year-to-year fluctuations. A full discussion of safety planning and the identification of safety needs for the AMATS area can be found in the current traffic crash technical memorandum. This memorandum also includes analyses of bicycle and pedestrian safety data. The memorandum is updated annually.

After reviewing historical crash trends, external factors and through consultation with the state's MPOs, ODOT established a 2 percent annual reduction target across all five safety categories statewide. ODOT developed a baseline using calendar year (CY) 2019-2023 for setting the CY 2025 safety targets. A state is considered to have met or made significant progress if at least four of the five targets are better than the baseline performance. AMATS Policy Resolution 2024-18 (September 2024) affirms support for ODOT's statewide safety targets for calendar year (CY) 2025.

The baselines used to set the targets are (CY 2019-2023):

- 1,228.2 fatalities
- 7,790.5 serious injuries
- 1.12 fatality rate (per 100 million vehicle miles traveled (VMT))
- 6.77 serious injury rate (per 100 million VMT)
- 842.4 non-motorized fatalities and non-motorized serious injuries

CY 2025 Targets for Ohio are:

- 1,180 fatalities
- 7,482 serious injuries
- 1.08 fatality rate
- 6.51 serious injury rate
- 809 non-motorized fatalities and non-motorized serious injuries

Crash data specific to the AMATS area can be found in the *Traffic Crashes and Safety Performance Measures (2021-2023) Report*, approved in December 2024. For statewide and regional data, ODOT provides a full safety analysis on its dashboard website:

<https://app.powerbigov.us/view?r=eyJrIjoibmVhIjMDEtOTU2OC00YjBmLWlxNzgtY2Y3ZTMwZTE0MDI3IiwidCI6IjUwZjhmY2M0LTk0ZDgtNGYwNy04NGViLTM2ZWQ1N2M3YzhhMij9>

The table below shows the current status of safety target performance statewide.

Table 5-3 Ohio Statewide Safety Performance				
Performance Measure	2023 Performance	2023 Target	Target Met?	2025 Target
Fatalities	1,228	< 1,173	No	< 1,180
Fatality Rate	1.12	< 1.04	No	< 1.08
Serious Injuries	7,791	< 7,649	No	< 7,482
Serious Injury Rate	6.77	< 6.77	No	< 6.51
Non-Motorized Fatalities & Serious Injuries	842.4	< 824	No	< 809

Notes:

1. All safety measures are rolling 5-year averages.
2. Rates are expressed as events per 100 million vehicle miles traveled (VMT).

3. Targets for 2023 and 2025 are a 2% annual reduction from the baseline performance (for 2021 and 2023, respectively).

The table below shows the projects and amount of money that is being invested to improve safety within the AMATS area during the TO2050 planning period (2025-2050). The number and costs shown are derived from projects listed in Section 6 and do not include the projects not yet identified.

Table 5-4 TO2050 Projects Improving Safety	
Number of Projects	Construction \$ (Millions)
63	\$288

Infrastructure Conditions – PM2

23 CFR 490.307 and 23 CFR 490.407 establish performance measures to evaluate the condition of Ohio's National Highway System (NHS) pavements and bridges. The table below shows these performance measures along with their baselines, 2-year targets, and 4-year targets. Infrastructure condition performance measures are designated as category 2: PM2. The table also shows that AMATS is assisting in meeting statewide infrastructure conditions targets.

Table 5-5 Infrastructure Condition Measures and Targets - PM2						
Performance Measure	Baseline (2021)	2-Year Performance (2023)	2-Year Target (2023)	4-Year Target (2025)	2-Year Target Met?	Trend
Interstate Pavement Condition						
% Good	72.9%	75.4%	> 55%	> 55%	Yes	↑
% Poor	0.1%	0.1%	< 1%	< 1%	Yes	↔
Non-Interstate NHS Pavement Condition						
% Good	46.4%	50.4%	> 40%	> 40%	Yes	↑
% Poor	1.9%	1.3%	< 2%	< 2%	Yes	↓
NHS Bridge Conditions						
% Good	60.9%	60.8%	> 55%	> 55%	Yes	↔
% Poor	2.0%	2.0%	< 3%	< 3%	Yes	↔

The tables below show the projects and amount of money that is being invested to maintain and improve pavement and bridge conditions in the AMATS area during the TO2050 planning period (2025-2050). The number and costs shown are derived from projects listed in Section 6 and do not include the projects not yet identified.

Table 5-6 TO2050 Projects Improving Pavements		
Road Type	Number of Projects	Construction \$ (Millions)
Interstate	2	\$163
Non-Interstate NHS	9	\$25.4
All Other Roadways	31	\$258.6
Total	44	\$447

Table 5-7 TO2050 Projects Improving NHS Bridges	
Number of Projects	Construction \$ (Millions)
2	\$163

The AMATS Policy Committee has previously approved support for ODOT's statewide goals for pavement and bridge conditions. (See AMATS Policy Resolution 2022-14, approved August 2022).

AMATS continues to support these targets and programs its projects with the goal of assisting ODOT in meeting these goals.

Travel Time Reliability, Congestion and Air Quality Measures – PM3

Travel Time Reliability

Level of Travel Time Reliability (LOTTR) is defined as the ratio of the longer travel times (80th percentile) to a “normal” travel time (50th percentile). The measures are the percent of person-miles traveled on the relevant portion of the NHS that are reliable.

Truck Travel Time Reliability (TTTR) is the ratio generated by dividing the 95th percentile travel time by the normal time (50th percentile) for each Interstate segment. The TTTR Index is established by multiplying each segment’s largest reliability ratio of five reporting periods by its length then dividing the sum of all length-weighted segments by the total length of Interstate.

The data to assess travel time reliability and establish targets is sourced from FHWA’s National Performance Management Research Data Set (NPMRDS).

23 CFR 490.507 and 23 CFR 490.607 established performance measures for the Level of Travel Time Reliability on Ohio’s NHS system. The table below shows these performance measures along with their baselines, 2-year targets, and 4-year targets.

Table 5-8 System Reliability Measures and Targets - PM3					
Performance Measure	Baseline (2021)	2-Year Performance (2023)	2-Year Target (2023)	4-Year Target (2025)	2-Year Target Met?
Travel Time Reliability (TTR) - Interstates	98.8%	97.1%	> 85.0%	> 85.0%	Yes
Travel Time Reliability (TTR) - Non-Interstates	96.4%	95.9%	> 80.0%	> 80.0%	Yes
Truck Travel Time Reliability (TTTR) Index	1.19	1.22	< 1.50	< 1.50	Yes

The table below shows the total projects and amount of money that is being invested to improve travel time reliability on the NHS system in the AMATS area during the TO2050 period.

Table 5-9 TO2050 Projects Improving Travel Time Reliability		
Road Type	Number of Projects	Construction \$ (Millions)
Interstate	2	\$163
Non-Interstate NHS	12	\$15.9
All Other Roadways	17	\$172.7
Total	31	\$351.6

CMAQ Traffic Congestion Measures – PHED and Non-SOV Travel

23 CFR 490.707 established the national performance measures for assessing traffic congestion. These measures are applicable to all urbanized areas that include NHS mileage and have populations of over 200,000 (also known as Transportation Management Areas, or TMAs). In addition, these two measures are only applicable in regions that are designated as non-attainment or maintenance areas for ozone (O3), carbon monoxide (CO) or particulate matter (PM10 and PM2.5), based upon the National Ambient Air Quality Standards (NAAQS).

The two congestion performance measures are as follows:

1. Annual Hours of Peak Hour Excessive Delay (PHED)

Peak Hour Excessive Delay (PHED) is based on the calculation of all segments of the National Highway System. PHED is defined as the extra amount of time spent in congested conditions defined by speed thresholds that are lower than a normal delay threshold. For this measure, the speed threshold is 20 mph or 60% of the posted speed limit, or whichever is greater. The FHWA requires that the data collected must occur during weekdays (Monday through Friday), with a required morning peak timeframe of 6:00am-10:00am, and a variable evening peak timeframe. This metric measures the number of hours of excessive traffic delay (per capita) each year.

The PHED measure formerly only applied to metropolitan areas with one million or more in population. However, as of 2022, urbanized areas of 200,000 or greater are now subject to the PHED measure. For this metric, excess delay is defined as travel time at 20 mph or 60% of the posted speed limit, whichever is greater, measured in 15-minute intervals during key travel windows.

2. Percent of Non-Single Occupant Vehicle (Non-SOV) Travel

Mode share is a measure of the percentage by mode of all surface transportation occurring in the urbanized area. Modes of surface transportation include driving alone in a motorized vehicle (Single Occupancy Vehicle), car or van pooling, public transportation, commuter rail, walking, or bicycling, as well as travel that is avoided by telecommuting. Non-SOV travel, defined by the FHWA, applies to any travel occurring on modes other than driving alone in a motorized vehicle. An analysis of mode share includes a calculation of the percent of Non-SOV travel within the urbanized area. This metric, which is derived from the U.S. Census Bureau's American Community Survey (ACS) data, illustrates the percentage of an urbanized area's traffic in which multiple people are in a vehicle. Higher levels of Non-SOV travel can reduce an area's traffic congestion by removing additional vehicles from the roadways, and also lowering the amount of mobile emissions.

The table below shows the two-year, and four-year targets for peak hours of excessive delay (PHED) and non-single occupancy vehicle travel (Non-SOV) in the Ohio air quality urbanized areas. The data for this metric was derived from the American Community Survey Economic Characteristics table. The table shows the progress made toward achieving the PHED and Non-SOV targets. Note that the targets are being met over the last two years in the Northeast Ohio region.

Table 5-10 Congestion Reduction Measures and Targets					
Performance Measure	Baseline (2021)	2-Year Performance (2023)	2-Year Target (2023)	4-Year Target (2025)	2-Year Target Met?
Annual Peak Hours of Excessive Delay (PHED) per Capita					
Akron Region	5.6	4.8	< 5.0	< 5.0	Yes
Canton Region	1.6	1.9	< 3.0	< 3.0	Yes
Cincinnati Region	7.1	6.1	< 9.0	< 9.0	Yes
Cleveland Region	6.8	6.5	< 21.0	< 21.0	Yes
Columbus Region	5.1	5.9	< 10.0	< 10.0	Yes
Dayton Region	6.3	6.9	< 7.2	< 7.2	Yes
Toledo Region	6.1	7.1	< 7.0	< 7.0	No

Table 5-10 | Congestion Reduction Measures and Targets

Percent of Non-Single Occupancy Vehicle (Non-SOV) Travel					
Akron Region	17.3%	19.4%	> 16.0%	> 16.0%	Yes
Canton Region	16.3%	17.7%	> 15.0%	> 15.0%	Yes
Cincinnati Region	20.0%	22.2%	> 18.5%	> 18.5%	Yes
Cleveland Region	20.6%	22.7%	> 18.5%	> 19.0%	Yes
Columbus Region	20.8%	24.0%	> 18.5%	> 19.0%	Yes
Dayton Region	18.1%	19.6%	> 16.1%	> 16.1%	Yes
Toledo Region	16.1%	17.6%	> 15.0%	> 15.0%	Yes

Projects that reduce the total number of vehicles on Ohio's roadways and those which improve traffic flow/reduce vehicle idling also contribute to the reduction in these mobile source pollutants. The tables below show projects and investments in the AMATS area that will assist in increasing Non-Single Occupancy Vehicle (Non-SOV) travel and reduce Peak Hour Excessive Delay (PHED). AMATS continues to support the two-year and four-year statewide targets which have been set by ODOT (AMATS Resolution 2022-14).

Table 5-11 | Transportation Outlook 2050 Projects Improving Non-SOV Travel

Number of Projects	Construction \$
0*	NA

* - It is likely that some transit and active transportation improvements could reduce Non-SOV travel through modal shift, but these projects and costs are not calculated because this is unknown at this point.

Table 5-12 | Transportation Outlook 2050 Projects Improving Peak Hour Excessive Delay

Number of Projects	Construction \$
31	\$351.6

Air Quality Measures

23 CFR 490.807 established the Total CMAQ Emission Reduction Performance Measures. These performance measures affect Ohio's U.S. EPA designated air quality nonattainment and maintenance areas. Ohio was required to set targets for its nonattainment and maintenance areas for the pollutants of Volatile Organic Compounds (VOCs), Nitrous Oxide (NOx), and Particulate Matter at 2.5 Micrometers in Diameter (PM2.5). The table below shows these performance measures along with their baselines, 2-year targets, and 4-year targets.

Air quality emissions reduction analyses calculate the total reduction in three mobile source (i.e. vehicle-based) pollutants: Volatile Organic Compounds (VOC), Oxides of Nitrogen (NOx), and Particulate Matter having a diameter of less than 2.5 micrometers (PM2.5).

The table below shows the on-road baseline, two-year, and four-year quantitative emissions targets for Volatile Organic Compounds (VOC), Oxides of Nitrogen (NOx), and Particulate Matter having a diameter of less than 2.5 micrometers (PM2.5). The baseline data was derived from the CMAQ Public Access System and aggregated, by state and pollutant type for the years 2018-2021. The 2018-2022 baseline data listed below is for the AMATS area. The data for the two and four-year targets was estimated from CMAQ projects in the TIP for the years 2022-2025; however, AMATS chose to support the two-year and four-year statewide targets which have been set by ODOT. Data is expressed in kilograms of pollutant per day.

**Table 5-13 | Statewide – CMAQ Funded Projects – Emissions Reduction Benefit
2022 – 2023 Evaluation**

Environmental Sustainability Measures and Targets					
Performance Measure	Baseline (2018 – 2021)	2-Year Performance (2022 – 2023)	2-Year Target (2022 – 2023)	4-Year Target (2022 – 2025)	2-Year Target Met?
Total Emissions Reduction – VOC (kg/day)	320.195	144.106	> 60.000	> 60.000	Yes
Total Emissions Reduction – NO _x (kg/day)	1018.130	222.595	> 250.000	> 250.000	No
Total Emissions Reduction – PM _{2.5} (kg/day)	246.405	18.78	> 30.000	> 18.200	No

Cleveland-Akron-Lorain Air Quality Non-Attainment Area

Summit County and Portage County are part of the U.S. Census-designated eight-county Cleveland-Akron-Lorain Combined Statistical Area (CSA). This area includes: Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, and Summit counties. Based on air quality readings, the United States Environmental Protection Agency (USEPA) designated this area as marginal non-attainment for the 2015 8-hour ozone standard, excluding Ashtabula County which is a maintenance area. The US EPA designated the entire eight-county area as a maintenance area for the 2008 8-hour ozone standard.

USEPA also designated seven counties and a township in this area (including Summit and Portage) as maintenance for PM_{2.5} (particulate matter) under the 2006 standard. These areas include Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, and Summit Counties, and Ashtabula Township in Ashtabula County.

Three Metropolitan Planning Organizations (MPOs) serve seven of these counties. The Northeast Ohio Areawide Coordinating Agency (NOACA) serves Cuyahoga, Geauga, Lake, Lorain, and Medina counties. AMATS serves Summit and Portage counties. The Erie Regional Planning Commission (ERPC) serves the City of Vermilion in Lorain County. Ashtabula County is not part of a Metropolitan Planning Organization.

The USDOT requires air quality conformity determinations every time a new TIP or Regional Transportation Plan is completed. This conformity analysis reflects the aggregate regional mobile emissions generated by vehicles using the transportation system recommended in the TIP and Regional Transportation Plan. Conformity is demonstrated when the forecasted regional emissions are below the applicable State Implementation Plan (SIP) budgets that have been established by Ohio EPA.

AMATS, NOACA and ERPC manage the transportation planning process in this non-attainment area, and coordinate on air quality issues. Consequently, AMATS has coordinated with ODOT, NOACA and ERPC in developing the Cleveland urbanized area traffic congestion (PHED and Non-SOV) targets shown above.

Federal Requirements for CMAQ Project Funding

The Congestion Mitigation and Air Quality (CMAQ) program supports two important goals of the U.S. Department of Transportation: improving air quality and relieving congestion. Reducing congestion is a key objective of federal surface transportation policy. The costs of congestion can be an obstacle to economic activity. In addition, congestion can hamper quality of life through diminished air quality, lost personal time, and other negative factors. Accordingly, the CMAQ Program includes federal funds programmatically allocated to each state for funding applicable projects.

A CMAQ project must meet three basic criteria: it must be a transportation project, it must generate an emissions reduction, and it must be in or benefit a nonattainment or maintenance area. Additionally, as with all federal-aid projects, CMAQ projects must be included in the MPO's current transportation plan and Transportation Improvement Program (TIP), or the current Statewide Transportation Improvement Program (STIP) in areas without an MPO. In nonattainment and maintenance areas, the project also must meet the conformity provisions contained in section 176(c) of the Clean Air Act (CAA) and the transportation conformity regulations. Lastly, all CMAQ-funded projects need to complete National Environmental Policy Act (42 U.S.C. 4321 et seq.) (NEPA) requirements and satisfy the basic eligibility requirements under titles 23 and 49 of the United States Code.

AMATS and ODOT each receive CMAQ funding and allocate it annually to fund applicable projects. In 2012, ODOT created the Ohio Statewide Urban Congestion Mitigation and Air Quality CMAQ Program (OSUCC). The intent of the program is to more quickly advance eligible projects that improve air quality, reduce congestion, and eliminate delay/improve safety, in addition to utilizing statewide CMAQ funding in the year funds are allocated. OSUCC is administered as a subcommittee of the Ohio Association of Regional Councils (OARC) Executive Directors. OSUCC is charged with developing protocols for managing the program, along with project selection. The CMAQ Program provides approximately \$70 plus million annually, to Ohio's eight largest Metropolitan Planning Organizations (MPOs) with populations larger than 200,000.

OSUCC/AMATS opens the program for applications once every two years. The next project solicitation will most likely occur in spring of 2025. Projects are selected on various criteria, only one of which is estimated emissions reduction benefits. Projects are not required to have quantifiable emissions reduction benefits; a criteria-based assessment is sufficient. All projects awarded annually must be entered into the FHWA's CMAQ Public Access System (PAS). Data for the CMAQ Emissions Reduction performance measure for the region is taken from the quantified benefits included in the projects listed in the PAS that have been funded in the region. The Table above lists the quantified benefits included in the PAS for the AMATS area for recent years (2022 to 2025). Further information on the joint MPO/ODOT CMAQ project process can be found in the [AMATS Funding Policy Guidelines](#).

Transit Asset Management (TAM)

Transit asset management (TAM) is a business model that prioritizes funding based on the condition of transit assets to achieve and maintain a state of good repair (SGR) for public transit assets. FTA rules establish a framework for transit agencies to monitor and manage transit assets, improve safety, increase reliability and performance, and establish performance measures in order to help transit agencies keep their systems operating smoothly and efficiently. See the Federal Transit Administration link for more information: <https://www.transit.dot.gov/regulations-and-guidance/asset-management/getting-started>

The regulations define the term "state of good repair", require that public transportation providers develop and implement TAM plans, and establish state of good repair standards and methods to measure performance for three asset categories in the AMATS area: equipment, rolling stock, and facilities.

The FTA's performance measures applicable to the AMATS area are:

- **Equipment:** The percentage of non-revenue (support and maintenance) vehicles that have either met or exceeded their useful life.

- **Rolling Stock:** The percentage of revenue vehicles (primarily buses and paratransit vehicles) that have either met or exceeded their useful life.
- **Facilities:** The percentage of facilities within an asset class with a condition rated below 3 on FTA's 1 to 5 scale to describe condition.

The AMATS planning area is served by two transit service providers: METRO RTA in Summit County and PARTA in Portage County. METRO and PARTA have each developed their own TAM plan. The TAM targets for each agency are established in the applicable TAM plan.

TAM targets are based on the condition of existing transit assets and planning investments in equipment, rolling stock, infrastructure, and facilities. The targets reflect the most recent data available on the number, age, and condition of transit assets, and capital investment plans for improving these assets.

METRO RTA and PARTA have established TAM targets for each of the applicable asset categories in its TAM plan. The targets are presented in the tables below.

Equipment

Equipment includes service vehicles and equipment not attached to or a part of a facility that has a replacement value greater than \$50,000. The following three tables provide definitions and examples of target setting for transit assets.

Table 5-14 | Equipment TAM Targets

Asset Class (NTD)	Asset Class	Performance Target	Performance Measure
Non-Revenue Vehicle	Service Lift	100% less than 10 years old	30%
Equipment	Mobile Vehicle Lift	100% less than 10 years old	100%
Equipment	Generator	100% less than 10 years old	100%

Rolling Stock Vehicles

Table 5-15 | Rolling Stock Vehicles TAM Targets

Asset Class (NTD)	Asset Class	Performance Target	Performance Measure
Bus	Heavy Duty Bus (B30-HD, B35-HD, B40-HD, B45-HD, B60-HD); Medium Duty Bus (B30-MD, B35-MD); Light Duty Bus (B30-LD)	< 40% older than 14 years	38%
Van	Accessible Vans (AV); (BSV); Converted Vans (CV); Modified Mini Van (MMV); (MV-1); Mini Vans (SMV)	< 35% older than 8 years	34%
Automobile	Automobile (AO)	< 50% older than 8 years	43%
Cut-Away Bus	LTL/LTN, LTV, LTV-FS, LTV-HC, LTV-N, LTV-S	< 20% older than 10 years	18%

Facilities

Table 5-16 | Facilities TAM Targets

Asset Class	Performance Target	Performance Measure
Passenger Facilities	0% below a "3"	0%
Maintenance Facilities	< 22% below a "3"	16%
Administrative Facilities	< 38% below a "3"	16%

AMATS Area TAM Targets

AMATS agrees to support the respective METRO RTA and PARTA TAM targets, thus agreeing to plan and program projects in the TIP that – once implemented – are anticipated to make progress toward achieving each RTA’s targets.

METRO RTA TAM Targets:

Table 5-17 METRO RTA TAM Plan Targets							
Asset Category Performance Measure	Asset Class	2025 Target	2026 Target	2027 Target	2028 Target	2029 Target	2030 Target
REVENUE VEHICLES							
Age - % of revenue vehicles within a particular asset class that have met or exceeded their Useful Life Benchmark (ULB)	AB - Articulated Bus	0%	0%	0%	0%	0%	0%
	AO - Automobile						
	BR - Over-the-road Bus	0%	0%	0%	0%	0%	0%
	BU - Bus	0%	0%	0%	0%	0%	0%
	CU - Cutaway Bus	20%	0%	0%	0%	0%	0%
	DB - Double Decked Bus						
	FB - Ferryboat						
	MB - Mini-bus						
	MV - Mini-van	20%	0%	0%	0%	0%	0%
	RT - Rubber-tire Vintage Trolley						
	SB - School Bus						
	SV - Sport Utility Vehicle						
	TB - Trolleybus						
	VN - Van	0%	0%	0%	0%	0%	0%
EQUIPMENT							
Age - % of vehicles that have met or exceeded their Useful Life Benchmark (ULB)	Non Revenue/Service Automobile	50%	50%	50%	50%	50%	50%
	Steel Wheel Vehicles						
	Trucks and other Rubber Tire Vehicles	50%	50%	50%	50%	50%	50%
FACILITIES							
Condition - % of facilities with a condition rating below Economic Requirements Model (TERM) Scale	Administration	0%	0%	0%	0%	0%	0%
	Maintenance	0%	0%	0%	0%	0%	0%
	Parking Structures	0%	0%	0%	0%	0%	0%
	Passenger Facilities	0%	0%	0%	0%	0%	0%
Achieving these targets depend largely on available funding from the Federal Transit Administration							

PARTA TAM Targets:

Table 5-18 | PARTA TAM Plan Targets

Asset Category Performance Measure	Asset Class	2025 Target	2026 Target	2027 Target	2028 Target	2029 Target	2030 Target
REVENUE VEHICLES							
Age - % of revenue vehicles within a particular asset class that have met or exceeded their Useful Life Benchmark (ULB)	AB - Articulated Bus						
	AO - Automobile						
	BR - Over-the-road Bus						
	BU - Bus	0%	0%	0%	0%	0%	0%
	CU - Cutaway Bus	0%	0%	0%	0%	0%	0%
	DB - Double Decked Bus						
	FB - Ferryboat						
	MB - Mini-bus						
	MV - Mini-van						
	RT - Rubber-tire Vintage Trolley						
	SB - School Bus						
	SV - Sport Utility Vehicle						
	TB - Trolleybus						
	VN - Van	0%	0%	0%	0%	0%	0%
EQUIPMENT							
Age - % of vehicles that have met or exceeded their Useful Life Benchmark (ULB)	Non Revenue/Service Automobile	0%	0%	0%	0%	0%	0%
	Steel Wheel Vehicles						
	Trucks and other Rubber Tire Vehicles	10%	10%	0%	0%	0%	0%
	Equipment with Rubber Tires	25%	25%	25%	25%	25%	25%
FACILITIES							
Condition - % of facilities with a condition rating below Economic Requirements Model (TERM) Scale	Administration	0%	0%	0%	0%	0%	0%
	Maintenance	0%	0%	0%	0%	0%	0%
	Parking Structures	0%	0%	0%	0%	0%	0%
	Passenger Facilities	0%	0%	0%	0%	0%	0%
	Storage Facilities	0%	0%	0%	0%	0%	0%

Achieving these targets depend largely on available funding from the Federal Transit Administration

TAM Investments in TO2050

METRO RTA and PARTA intend to use available funding to improve the condition of the region's transit assets. The process considers factors such as maintaining capital in a state of good repair, air quality improvements, and congestion management on highly traveled roadways.

Transit Safety Performance

FTA's Public Transportation Agency Safety Plan (PTASP) regulations established transit safety performance management requirements for providers of public transportation systems that receive federal financial assistance for public transportation under 49 U.S.C. Chapter 53.

The PTASP must include performance targets for the performance measures established by FTA in the National Public Transportation Safety Plan. The transit safety performance measures are:

- Total Number of Fatalities

- Fatality Rate: Fatalities per 100,000 Vehicle Revenue Miles (VRM)
- Total Number of Injuries
- Injury Rate: Injuries per 1,000,000 Vehicle Revenue Miles (VRM)
- Safety Events
- Safety Events per 1,000,000 Vehicle Revenue Miles (VRM)
- System Reliability (VRM/failures)

The AMATS planning area is served by two transit service providers: Akron METRO RTA and PARTA. Each RTA is responsible for developing a PTASP and establishing safety performance targets for fixed route service as well as paratransit service.

Transit Agency Safety Targets

METRO RTA established the safety targets in the table below in December 2023:

Table 5-19 METRO RTA Safety Targets							
Mode of Transit Service	Fatalities (Total)	Fatalities (per 100,000 VRM)	Injuries (Total)	Injuries (per Million VRM)	Safety Events (Total)	Safety Events (per Million VRM)	System Reliability (VRM/Failures)
Fixed Route Bus	0	0	8	0.82	25	9.55	8,949
ADA / Paratransit	0	0	0	0	5	7.79	14,792

PARTA established the safety targets in the tables below in December 2022:

Table 5-20 PARTA Safety Targets							
Mode of Transit Service	Fatalities (Total)	Fatalities (per 100,000 VRM)	Injuries (Total)	Injuries (per Million VRM)	Safety Events (Total)	Safety Events (per Million VRM)	System Reliability (VRM/Failures)
Fixed Route Bus	0	0	0	1.31	40	7.34	9,372
ADA / Paratransit	0	0	0	0	20	5.12	2,731

AMATS Transit Safety Targets

AMATS agreed to support the METRO RTA and PARTA safety targets, thus agreeing to plan and program projects in the TIP that, once implemented, are anticipated to make progress toward achieving each RTA's targets.

Chapter 6 | Recommendations

The ultimate output of TO2050 is its recommendations. The recommendations that follow are produced based on this planning process and the various input document reports and studies conducted prior to TO2050.

The following pages outline recommendations related to highways, transit, and active transportation networks. Each subsection includes the following:

- Overview
- Funding
- General Recommendations
- Projects Specific Recommendations

The recommendations included in Transportation Outlook 2050 are financially constrained, meaning that they must fit within the total funding estimated to be allocated to the Greater Akron area between now and 2050. All projects also conform to federal air quality requirements.

Highway Recommendations

Overview

Highways are the most utilized component of the region's transportation system. The recommendations contained in Transportation Outlook 2050 aim to preserve the existing system and improve the safety of the system. The following section contains policy and highway infrastructure recommendations to improve and maintain the region's highway network.

Funding

AMATS receives federal transportation dollars to fund highway improvements. These funds can be used for a variety of projects including roadway intersection improvements (e.g. roundabouts or reconfigurations of an intersection, traffic signals), and roadway section/corridor improvements, (e.g. changes in grading, addition of turning or driving lanes, roadway reconfigurations/ road diets). Significant highway related funding is also put toward roadway maintenance (e.g. resurfacing or reconstruction of roadways, bridge rehabilitation and replacement).

Improvements can be funded through several AMATS funding sources, each of which carry their own eligibility guidelines. All AMATS-funded projects may only be utilized on federally eligible roadways based upon the Federal Functional Classification of Highways (see map 4-1 on page 21). Local roadways and rural minor collectors are not eligible for funding.

Details of each source can be found below:

Table 6-1 | AMATS Highway Funding Programs

Funding Program	Description	Funding Available per Project
Carbon Reduction Program (CRP)	A newer funding source designed to fund projects that reduce carbon dioxide emissions from on-road highway sources. Roundabouts are the top-scoring project type, compared to other eligible activities.	\$2m maximum; 20% local match
Surface Transportation Block Grant (STBG)	Versatile funding source for a wide variety of transportation projects on federally classified collector and arterial roadways.	\$6m maximum; 10%* to 20% local match
	AMATS suballocates 50% of its STBG funding into a STBG-Resurfacing funding source. This funding is limited to full and partial depth pavement repair and sidewalk ramp projects on non-state routes	\$800,000 maximum; 10%* to 20% local match
Congestion Mitigation / Air Quality (CMAQ)	Flexible funding source for transportation projects and programs to help meet the requirements of the Clean Air Act. Eligible projects must improve air quality and relieve congestion.	No stated maximum, but the AMATS region historically receives about \$6m-\$7m per year; 20% local match

* - Local share can be reduced to 10% if sponsors elect to participate in AMATS' Project Delivery Incentive Program (PDIP), which is a program that incentivizes project sponsors to deliver their projects within a specified time window.

AMATS currently receives around \$20 million annually for highway improvements, including Transportation Alternatives Set-Aside (TASA) funding, which is discussed within the Active Transportation subsection.

The funding received by AMATS is a substantial source of revenue for highway projects, though many projects within Greater Akron also utilize funding available through The Ohio Department of Transportation (ODOT). ODOT oversees many state-funded programs such as the popular Urban Paving Program as well as programs that utilize a combination of state and federal funding, such as the ODOT Safety funding programs. ODOT receives its revenue from federal and state gasoline taxes.

A singular project is often funded through a combination of AMATS-managed (federal) and ODOT-managed (federal and state) funding programs. Counties and municipalities also receive federal and state funding. Discretionary funding, either through competitive funding programs or earmarks, can be made available for highway projects when written into federal legislation.

Any highway project using federal funding must be consistent with Transportation Outlook 2050, regardless of whether AMATS provided the funding. Transportation Outlook 2050 is important because it gives the authority to local officials to determine collectively how federal funds are spent.

General Recommendations

Continue to Preserve Area Roads and Bridges

Preservation and maintenance of the existing roadway system may not be glamorous, but it is fundamental to a functional highway system. AMATS encourages project sponsors to focus on maintaining pavements and bridges through resurfacing, pavement replacement, and bridge maintenance activities. Interventions within a pavement cycle (e.g. chip-and-seal, crack sealant) or bridge life-cycle (e.g. bridge painting, bridge surface repair, and other interventions) typically lead to a lower life-cycle cost. In 2024, AMATS estimated that maintaining the existing system through 2050 would cost \$6.86 billion dollars, a number that exceeds the region's total expected funding within that same window. Despite the daunting dollar amount, AMATS recognizes that the longer large preservation projects are delayed, the more expensive they become.

Transportation Outlook 2050 recommends a regional preservation policy. Since 2008, AMATS has devoted dedicated funds toward a local resurfacing program (the STBG-Resurfacing program discussed previously). This program has been incredibly successful and popular throughout the region. AMATS currently allocates 50% of the total regional STBG funding toward the resurfacing program (about \$5.7 million annually) and anticipates that this program will continue.

Consider Operational and Safety Projects to be Consistent with Transportation Outlook 2050

AMATS maintains its policy that projects that improve safety conditions or contain operational improvements are consistent with Transportation Outlook 2050. In addition to the specific projects listed in Table 6-1 AMATS recognizes that it is necessary to provide flexibility within the planning process to allow for unforeseen changes, such as road sections and intersections that come onto the High Injury Network or High Crash lists. AMATS has set aside \$75 million over the life of the plan for unspecified safety and operation improvements.

Reduce Congestion by Promoting Carpooling and Encouraging Alternative Modes of Transportation

As detailed in AMATS Congestion Management Process, the AMATS region has relatively little recurring congestion. TO2050 recognizes that reducing congestion, although not as important as improving safety and maintaining the system, it is still an important issue that can have negative effects on the transportation system. AMATS supports the approach of implementing low-cost countermeasures to reduce congestion (e.g. traffic signal modernization, modest operational improvements) and recognizes that promoting alternative transportation modes can be a viable way to reduce congestion. Some of the ways AMATS will continue this advocacy are shown below:

- Promote Gohio Commute, a website that allows users to find carpooling partners and other modes of transportation.
- Continue recommendations and incentives for the inclusion of bicycle and pedestrian elements on any projects where such accommodations are feasible, promote Complete Streets, and advocate for these modes at various community events.
- Continue its strong partnerships with regional transit agencies—METRO and PARTA—and encourage their efforts to increase ridership and continue to provide convenient and positive ridership experiences.

Increase Areawide Focus on the Optimization of Traffic Signals

AMATS has invested heavily in coordinated signals throughout the Greater Akron area over the past two decades. In 2023, AMATS began work on undertaking a regional signal inventory to understand the issues and priorities across the nearly 1,000 signals within the planning region. This project, which is very near completion, will allow AMATS to make more informed decisions about the needs of various signalized intersections. One way this could be done is through the creation of a signal timing optimization program to provide grant funding for communities to invest in signal operation improvements—something AMATS staff recommend and plan to discuss with AMATS committees once the signal inventory is complete.

Connecting Communities Planning Grant Program

In 2010, AMATS published *Connecting Communities: A Guide to Integrating Land Use & Transportation*, to encourage the integration of land use and transportation planning, and to promote and target investment toward alternative modes of transportation. Since that time, AMATS created a program to provide funds for studies that supports the goals of Connecting Communities. As of 2025, Connecting Communities planning grants have been awarded to 15 recipients, and the improvements recommended within these studies have led to multiple infrastructure investments in the Greater Akron area. AMATS will continue administering the Connecting Communities Planning Grant Program and continue emphasizing the integration of land use and transportation planning.

Project Recommendations

\$6.87 Billion of Highway Transportation Infrastructure Investments

Transportation Outlook 2050 recommends nearly \$7 billion dollars of highway infrastructure investments through 2050 in year of expenditure dollars. This funding includes over \$5.7 billion for preservation of the existing system, \$163 million specifically for freeway recommendations, \$391.8 million for specific roadway projects, and \$75.2 million toward general safety and other operational improvements in the AMATS area. Two important notes:

- The \$6.87 billion total amount also includes \$35 million toward the Active Transportation improvements described in the Active Transportation Recommendations subsection).
- Some of these roadway investments include elements that would provide specific benefits to transit operations (e.g. Complete Streets improvements, corridors designed to allow for improved transit operations).

The following table shows Long-Term Highway projects recommended in Transportation Outlook 2050. All projects are financially constrained and conform to air quality requirements.

Table 6-2 | Highway Recommendations

Maintenance Recommendations					Current Cost
	Pavement Resurfacing	(65 Percent of Need Identified in Preservation Needs Report)			\$ (1,233,134,550.05)
	Pavement Replacement	(65 Percent of Need Identified in Preservation Needs Report)			\$ (77,686,700)
	Bridge Preservation	(65 Percent of Need Identified in Preservation Needs Report)			\$ (2,892,879,574)
AMATS Program 2026-2029					
	AMATS Programmed Projects				\$ (485,483,521)
AMATS Ongoing Regionwide Improvements					
	Safety and Operational				\$ (75,208,000)
	Bicycle and Pedestrian				\$ (35,003,645)
Freeway Recommendations					
Map ID		Recommendation	From	To	Current Cost
1		I77/SR8 Corridor Improvements	Lovers Lane	Perkins St	\$ (77,000,000)
2		I-76 "Kenmore Leg" Improvements to increase capacity and improve safety	I-76 @ I-277 Ramp	North of I-76 @ I-77 ramp	\$ (86,000,000)
Roadway Recommendations					
Map ID	Community	Recommendation	From	To	Current Cost
3	Akron	Roundabout (or other intersection improvements)	Glenwood Ave. @ N. Howard St.		\$ (3,000,000)
4	Akron	Reconnecting Communities Improvements, new street connections and placemaking along former/current freeway	Innerbelt Vicinity (Exact Locations TBD)		\$ (20,000,000)
5	Akron	Rand and Dart Avenue Road reconfigure/function	Boulevard Street	W. Market Street	\$ (12,000,000)
6	Akron	Phase 1 W. Exchange St. Complete Streets and Reconstruction	Jefferson Ave.	Portage Path	\$ (4,700,000)
7	Akron	Phase 2 W. Exchange St. Complete Streets and Reconstruction	Clemmer Ave.	Jefferson Ave.	\$ (5,000,000)
8	Akron	Phase 3 W. Exchange St. Complete Streets and Reconstruction	S. Hawkins Ave.	Clemmer Ave.	\$ (5,000,000)

Map 6-1 | Highway Recommendations

Active Transportation Recommendations

Overview

Active Transportation facilities are an essential part of the overall transportation system throughout the Greater Akron area. Active transportation provides a low-cost and environmentally friendly means of transportation, and active transportation can provide physical and mental health benefits that increase peoples' quality of life. Bicycling and walking are efficient transportation modes for short trips and, where convenient intermodal systems exist, these nonmotorized trips can easily be linked with transit to significantly increase trip distance. Because of the benefits they provide, bicycle and pedestrian facilities should be given the same priority as is given to other transportation modes. Cycling and walking should not be an afterthought in roadway design.

AMATS has a long history of planning for active and multi-modal transportation systems. TO2050 will build on recent and past efforts including the 2024 Active Transportation Plan. AMATS envisions a Greater Akron area in which biking and walking are not only integral parts of daily life, but vital components of a first-class, multimodal transportation system. AMATS also understands that a high-quality active transportation network provides essential access for those who do not own cars. Rather than viewing these networks as generally separate entities as has been done in the past, AMATS urges area communities and project sponsors to identify and pursue opportunities to link these networks to transit networks for the benefit of all transportation users.

A variety of bicycle and pedestrian facilities exist throughout the Greater Akron area, and the active transportation network grows each year. This network includes separated trails (shared-use paths), sidewalks, bicycle lanes, and various elements that allow for a safer coexistence between active transportation users and vehicles (e.g. signs, higher-visibility crosswalks, pedestrian signals).

The recommendations contained in TO2050 are primarily focused on expanding active transportation networks through additional facilities and making safety improvements to the region's roadways that benefit bicycle and pedestrian networks.

Funding

AMATS' primary mechanism to federally fund bicycle and pedestrian improvements is through the Transportation Alternatives Set-Aside Program (TASA). AMATS currently receives about \$1.2 million in TASA annually. All TASA projects must relate to surface transportation and address a transportation need, use or benefit. Preliminary engineering, right-of-way and construction are eligible project costs. Planning is an eligible project phase only for Safe Routes to School (SRTS) District Travel Plans provided that the sponsor has first pursued and secured funding from the Ohio Department of Transportation SRTS Program.

The AMATS programs described in Table 6-1 — particularly STBG, but in some cases CRP and CMAQ—can also be utilized to build active transportation facilities. When non-TASA AMATS funding is used to construct active transportation improvements within the AMATS area, this is typically done as part of a larger corridor improvement program.

Details of the TASA program are included on table 6-3 below.

Table 6-3 | AMATS Active Transportation Funding Program

Funding Program	Description	Funding Available per Project
Transportation Alternatives Set-Aside (TASA)	This source provides funding for bicycle and pedestrian facilities. Funding for TASA projects is assigned to MPO areas by Congress and, in addition, ODOT sub allocates a portion of their statewide TASA funding to Ohio MPOs.	\$1m; 10%* to 20% local match
* - Local share can be reduced to 10% if sponsors elect to participate in AMATS' Project Delivery Incentive Program (PDIP), which is a program that incentivizes project sponsors to deliver their projects within a specified time window.		

Many bicycle and pedestrian improvements are most effectively implemented at the outset of roadway or transit project funding and construction. While all projects represent important steps for improving AMATS bicycle and pedestrian environment, limited financial resources require that most regional bicycle and pedestrian projects use a variety of federal, state and local sources. It is therefore suggested that many regional off-road trails rely on local initiative and commitment where member communities seek additional funding. Any bicycle or pedestrian project using federal funds must be consistent with TO2050, regardless of whether AMATS provides the funding. TO2050 gives local officials the authority to determine collectively how federal funds are allocated.

General Recommendations

Prioritize High Community Benefit Projects and Allow for Flexibility

TO2050 supports the infrastructure goals of the *AMATS 2024 Active Transportation Plan*: building or improving shared use paths, sidewalks, increasing bike lane mileage and improving on-road pavement quality for bicycles. TO2050 recommends that funding is focused on implementing these goals where they will provide the highest levels of community benefit. While it is important to develop a long-range plan, it is also necessary to provide flexibility in the planning process to allow for unseen developments. TO2050 ensures that transportation improvements are planned and coordinated on a regional basis. It is AMATS policy that projects coupled with safety improvements, such as bicycle and pedestrian amenities, must be consistent with TO2050 to be eligible for federal funding.

Convert Existing Roadways to Complete Streets Where Feasible and Logical

Complete Streets are designed with all users in mind: vehicular drivers and passengers, transit users, pedestrians, bicyclists, and micromobility users. AMATS strongly encourages communities to consider the needs of each of these users and to design roadways to accommodate these needs whenever practical. In most cases, particularly in high and medium density areas, people like to have options for getting around town. Bike lanes, bus lanes, bus shelters, sidewalks, crosswalks, refuge islands, curb bump-outs, and roundabouts are all components of a complete street that can improve safety for everyone. Making a street welcome to everyone can improve the vitality of an area and make it a place where people want to be.

Encourage Communities to Create Safe Routes to Schools Travel Plans and Apply for Funding

Safe pedestrian and bicycle access to schools is important yet often lacking. AMATS encourages communities and school districts to consider high-quality, safe active transportation infrastructure near schools. The Ohio Safe Routes to School (SRTS) Program supports projects and programs that improve the health and well-being of children by enabling and encouraging them to walk and bicycle to school. SRTS programs examine conditions around schools and conduct projects and activities that work to improve safety and accessibility in the vicinity of schools. The most successful SRTS programs incorporate the Five E's: Engineering, Education, Enforcement, Encouragement, and Evaluation.

The development of a School Travel Plan (STP) is a requirement of the SRTS Program to be eligible for infrastructure improvements. The STP outlines a community's plans for engaging students in active transportation. The STP involves key community stakeholders to identify barriers to active transportation and develop a set of solutions to address them. Several area school districts have an active STP and are therefore eligible to apply for SRTS funding; something many communities have done successfully. Although developing a STP takes time, effort, and money (either through consultants or staff time), AMATS communities with STPs have seen the value through the implementation of important projects. Prioritizing pedestrian safety and improvements near schools provides an opportunity to work closely with schools, communities, and local government to create a healthy lifestyle for children—and a safer and cleaner environment for everyone.

Consider Road Diets on Roadways That Can Support Fewer Driving Lanes

A road diet is a technique that can be used to slow the speed of traffic and improve safety. Road diets occur when the numbers of lanes or lane widths are reduced to promote a slower vehicle speed and accommodate other uses such as bike lanes, bus lanes, parking, pedestrian refuge islands, or more sidewalk space. In 2015, AMATS compiled the Road Diet Analysis, which identified dozens of candidates for road diets across the Greater Akron area, many of which have since taken place. The analysis is a useful planning resource that defines the road diet concept, identifies potential road diet locations, and serves as a guide to member communities to consider the design and application of road diets in certain locations. AMATS intends to update this plan and measure the effectiveness of implemented road diets.

Encourage Traffic Calming to Reduce Vehicle Speeds

AMATS continues to support the consideration of methods used to calm, or slow down, vehicular traffic on streets, thereby making streets safer for pedestrians/bicyclists. Traffic calming measures should especially be considered in areas that experience high volumes of pedestrian and bicycle traffic. Traffic calming methods typically make neighborhoods safer, more pleasant, and more livable. Traffic calming is a broad term and can be achieved through several methods—typically several are used in tandem to achieve the desired calming effect. Popular and proven traffic calming effects include but are not limited to:

- Higher visibility crosswalks, sometimes including contrasting textures (such as brick or stamped asphalt), raised pedestrian crossings, signage or signalization
- Curb bump-outs/extensions
- Street trees within the treelawn/devilstrip
- Dynamic feedback signage
- Narrowing driving lanes or even reducing travel lanes (road diets) where appropriate

Traffic calming can entail physical changes to the road itself or the spaces around the road. Traffic calming can be inexpensive (changing a street's paint markings or adding signage) or involve more significant changes to a roadway. Many elements of traffic calming have psychological effects on drivers; a successful approach provides cues to drivers that they should slow down. Over decades of use, these measures have been proven to reduce accidents, collisions, noise, vibration, pollution, and crime. Traffic calming is most often found in downtowns or

urban centers due to their high levels of pedestrian activity, though they may also be implemented in less dense neighborhoods.

Project Recommendations

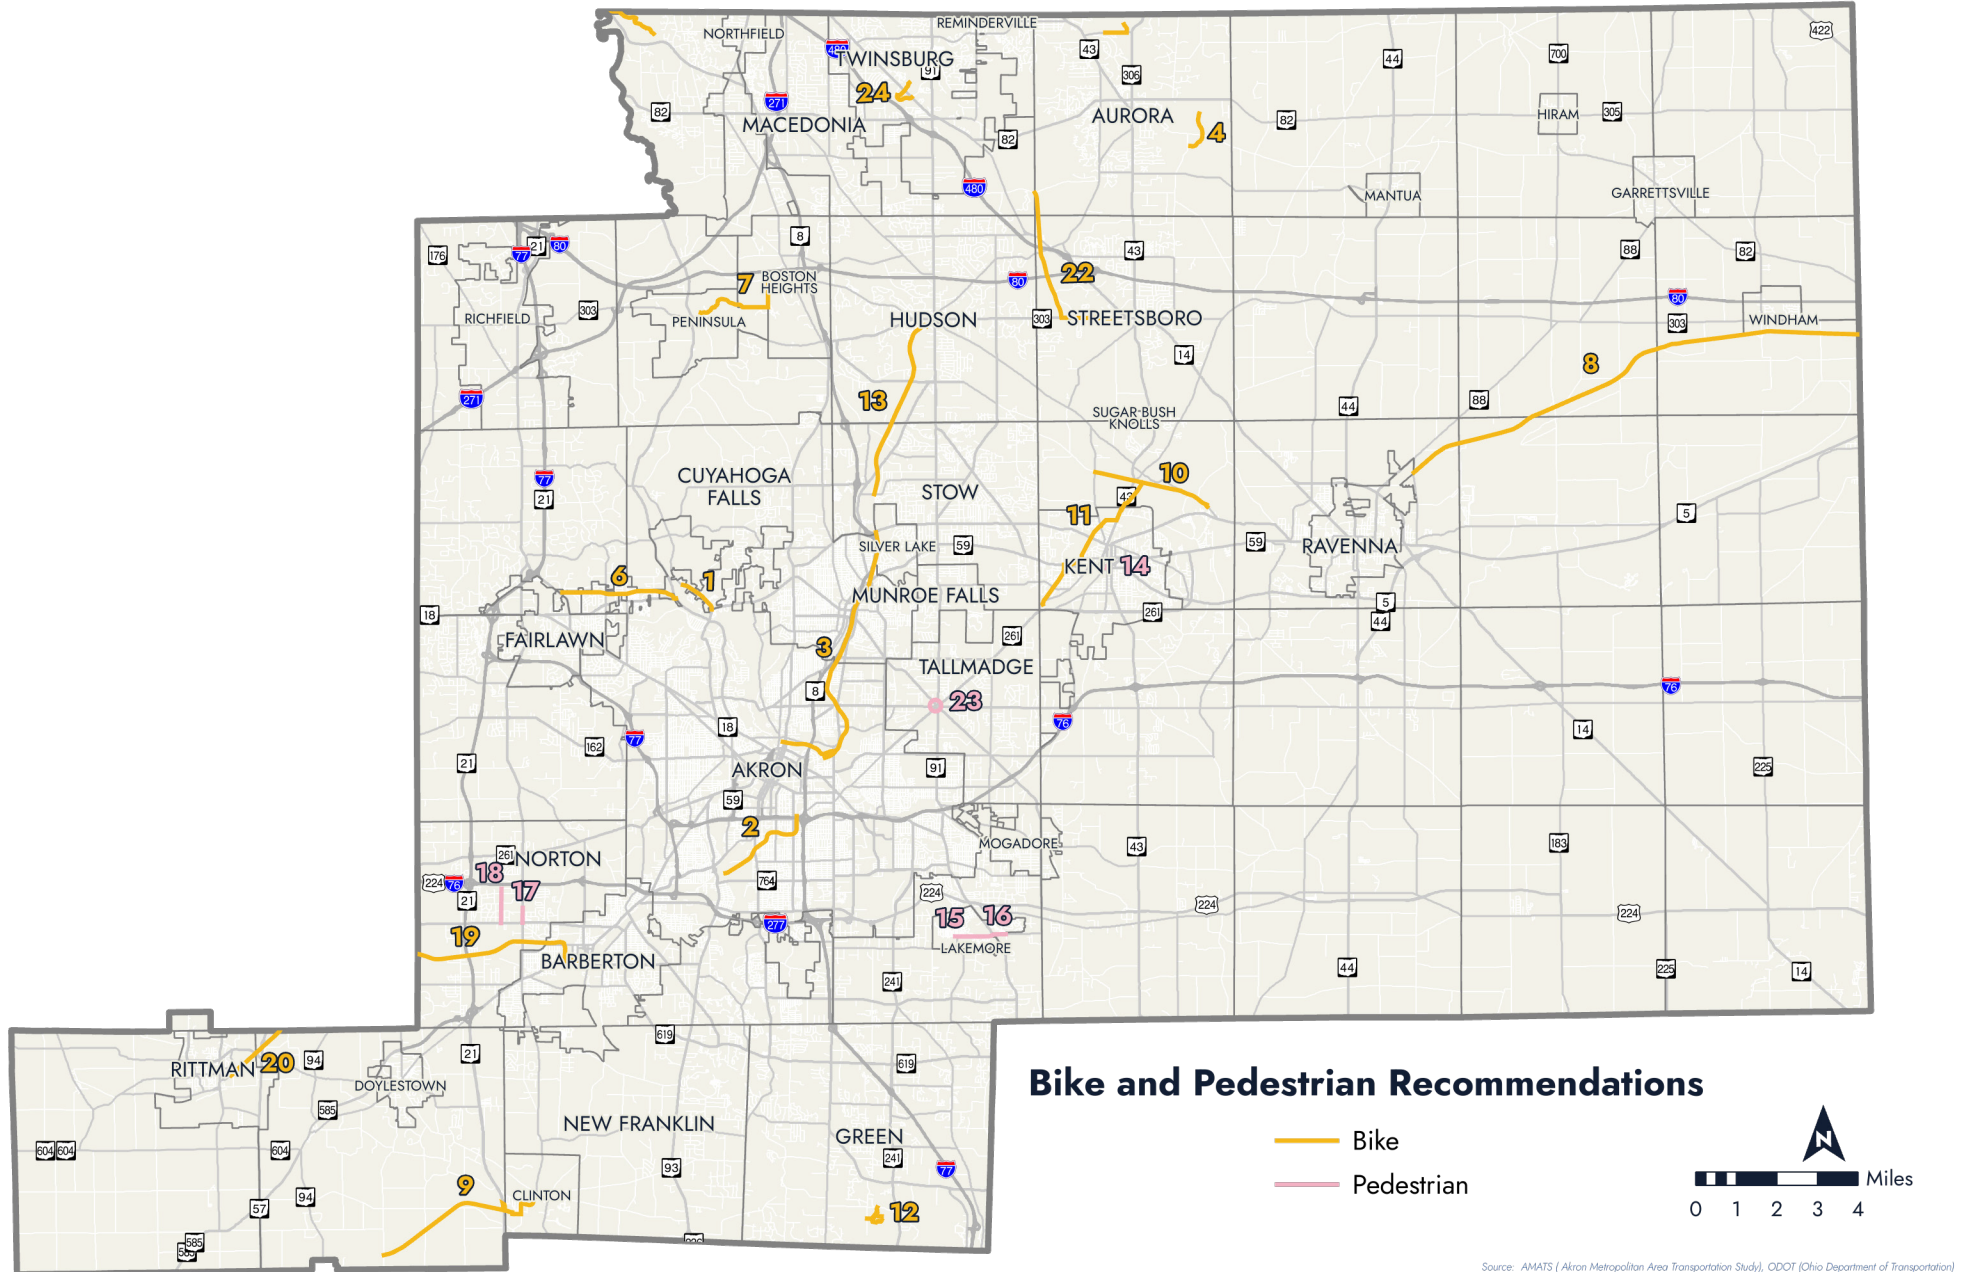

\$35 Million Toward Active Transportation Improvements

The Long-Term Bicycle and Pedestrian Recommendations tables and maps on the following pages contain various recommendations that allow for safe and convenient bicycle and pedestrian transportation within the region. Project costs are shown in current dollars for the entire project. *Appendix B* shows costs inflated to year of expenditure and federal share, totaling \$35 million in federal investment. All projects are financially constrained and conform to air quality requirements.

Table 6-4 | Bicycle and Pedestrian Recommendations

Bicycle and Pedestrian Recommendations						
Map ID	Community	Name	From	To	Distance	Cost (Current)

Map 6-2 | Active Transportation Recommendations

Transit Recommendations

Overview

The availability of a comprehensive, reliable transit network is key to helping those who lack (or are unable to use) automobile transportation get to work, have access to shopping and services, and complete other important daily tasks. A convenient transit network can also draw choice-riders: Those who have access to automobiles but choose to use transit for reasons of ease, affordability and convenience. The recommendations contained in Transportation Outlook 2050 will work to preserve the existing transit system, provide enhanced service in key high-volume corridors and allow for strategic expansion into new communities that contain high densities of jobs, retail and other attractions.

Funding

AMATS receives federal transportation dollars to fund transit projects and improvements. Most of this federal transit funding comes from programs specifically dedicated to transit, although transit may also receive a portion of the funds from certain programs designed for highway and transit funding.

Federal transit funds are typically used only for capital expenses, such as for the purchase of new buses, bus shelters and maintenance, garage or office facilities. Operating expenses, such as bus operator salaries and a portion of preventive maintenance, are typically paid for through local sources (fare box revenues, transit-dedicated sales tax, etc.). However, certain funding programs may be used to supplement operating expenses, on a limited basis. The primary federal funding sources used to fund transit include:

Table 6-5 AMATS Transit Funding Programs	
Funding Program	Description
Section 5307	This is the primary source of federal funding for capital and maintenance projects. These funds are typically used to purchase new buses, equipment, and for preventative maintenance and planning.
Section 5310	Also known as the Specialized Transportation Program, these funds may be used for capital or operating expenses tailored to better serving elderly persons and persons with disabilities.
Section 5339	This source is somewhat similar to 5307 in that can also fund capital projects. These funds are also used for new buses or for capital facilities.

There is no funding cap for any of these programs.

The Federal Transit Administration's (FTA) Urbanized Area Formula Program (Section 5307) and the FTA Bus and Bus Facilities Program (Section 5339) are the largest sources of federal transit funding. The 5307 and 5339 programs use a formula to allocate funding to urbanized areas. AMATS receives around \$11 million annually for the Akron Urbanized Area and the portion of the AMATS planning area that lies within the Cleveland Urbanized Area. These funds are split between METRO and PARTA, generally in proportion to their respective county's share of the total regional population.

Two federal sources from the Federal Highway Administration (FHWA)—Congestion Mitigation/Air Quality Program (CMAQ) and Carbon Reduction Program (CRP)— provide funds that may be used on projects demonstrating an improvement in air quality and congestion reduction. Although most of this funding is typically allocated towards regional highway projects, AMATS traditionally obtains a portion of CMAQ for local transit projects. Both CMAQ and CRP are described in Table 6-1 within the Highway Recommendations subsection.

Other sources of transit funding are periodically made available from the federal government or the Ohio Department of Transportation, often in the form of competitive grant programs. Any transit project using federal funding must be consistent with Transportation Outlook 2050, regardless of whether AMATS provided the funding.

General Recommendations

Invest in the Preservation of the Existing Transit Network, Assets, and Supporting Facilities

The majority of federal transit funding will be used to preserve the existing transit network, assets and supporting facilities in the AMATS region. Transit service is not useful unless it is predictable and dependable.

Transportation Outlook 2050 continues AMATS' longstanding policy of working with METRO and PARTA to ensure that they have the resources necessary to maintain their existing levels of service and to serve their existing customer base efficiently. To that end, AMATS will continue to support the preservation and maintenance of METRO and PARTA's bus fleets and other capital assets and facilities.

Ensure That Transit is an Integral Component of Land Use Planning Efforts

Sound land-use decisions and future development can improve the public transportation network, and quality transit services can allow development to occur more responsibly. This can be achieved in several ways:

- Bus rapid transit (BRT) provides dedicated service routes with higher speeds, improved wait times and more reliability. It can take the shape of dedicated bus lanes, additional stop infrastructure such as improved waiting environments, or signal prioritization. Bus rapid transit works particularly well in corridors containing dense employment, attractions and residential areas. In 2023, METRO studied several potential corridors for bus rapid transit and remains interested in building a BRT system. While feasibility of routes is still being fine-tuned, one likely area of focus would primarily run along South Arlington Road and connect into the RKP Transit Center in downtown Akron.
- Transit Oriented Development (TOD) is typically high-density development along a transit line that benefits from having consistent transit presence on the corridor. With the potential of bus rapid transit in the Greater Akron area, the transit agencies should also pursue joint development opportunities with private investors to create transit-oriented development near fixed-route service.
- Advocating for new development in the right places is important because it is important to locate jobs—especially when employees use transit—in areas where service exists or can be provided. Having transit agencies involved in regional employment conversations helps inform the planning process.

Optimize Transit Service

Various technologies, such as scheduling software for service or personnel, can assist transit agencies by making operations more efficient. PARTA recently invested in ITS improvements. Technology can allow for service improvements too. For example, microtransit, a demand response type service with integrated web applications that can provide flexibility for ridership where fixed-route transit service isn't warranted, can provide a nimbler service allowing riders to schedule services on the same day and pay a fixed cost to ride. Both METRO and PARTA will continue to focus on microtransit hubs over the life of Transportation Outlook 2050. Microtransit is expected to potentially replace some fixed-line service and costs associated with changes to the route structure would be absorbed into existing operation costs and be considered revenue/cost-neutral.

Both METRO and PARTA also periodically study current service to adjust to new travel patterns and needs of their riders. METRO did this in 2023 and PARTA is currently doing this.

Continue and Build Upon the Coordination and Collaboration Between Agencies

At the local level, most transit agencies are funded primarily through transit-dedicated sales taxes. Consequently, they face significant political pressure to confine service within their county borders. Philosophically, the primary role of a transit agency should be to transport their ridership to whatever destination is necessary. Northeast Ohio is a region of many counties and overlapping urban areas, and the demand to travel between them is significant. METRO, PARTA and SARTA (the Stark County/Canton public transit agency) currently provide service to limited cross-county destinations. Transportation Outlook 2050 recommends a more integrated, regional transit network – between Summit and Portage counties and beyond.

\$2.4 Billion of Public Transit Investment

Transportation Outlook 2050 recommends just under \$2.5 billion of investment in the region's public transportation system through 2050. Of that investment, \$1.8 billion will be dedicated to general operating expenses of the existing system, \$211 million will be reinvested to preserve the existing bus fleet, and approximately \$109 million will be allocated toward expansion of the regional public transportation system, including capital (facilities) and operating costs. The following table shows the projects recommended in Transportation Outlook 2050. All projects are financially constrained and conform to air quality requirements.

Table 6-6 Transit Recommendations	
METRO	Cumulative Costs
Operating Expenses – Base Service	\$ (1,802,441,948)
Micro-Transit – Demand Response	
Capital Expenditures – Base Service	
Annual Bus Fleet Expenditures	\$ (204,680,000)
Bus Shelter and Stop Enhancements	\$ (5,500,000)
Operating Expenses – Additional Service	
BRT Service Priority Corridor	\$ (13,790,922)

Appendix A | Air Quality Analysis

Introduction

The purpose of this appendix is to document the manner in which transportation conformity is demonstrated for Transportation Outlook 2050.

Summit County and Portage County are part of the U.S. Census-designated eight-county Cleveland-Akron-Lorain Combined Statistical Area (CSA). This area includes the counties of Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, and Summit. Based on air quality readings, the United States Environmental Protection Agency (USEPA) designated this area as serious nonattainment for the 2015 8-hour ozone standard, excluding Ashtabula County. The USEPA designated the entire eight-county area as a maintenance area for the 2008 8-hour ozone standard. “Nonattainment” is a technical term in air quality that means an area has too much of one of the nation’s most widespread and dangerous air pollutants, such as ozone. It means that an area must clean up emissions to reach, or “attain” the official health-based limits for that pollutant.

USEPA also designated six counties as a maintenance area under the 2006 annual PM_{2.5} (particulate matter) standard. These areas include Cuyahoga, Lake, Lorain, Medina, Portage, and Summit Counties. In addition, the USEPA designated Cuyahoga and Lorain counties as a maintenance area under the 2012 annual PM_{2.5} standard.

Two Metropolitan Planning Organizations (MPOs) serve seven of these counties. The Northeast Ohio Areawide Coordinating Agency (NOACA) serves Cuyahoga, Geauga, Lake, Lorain, and Medina counties. The Akron Metropolitan Area Transportation Study (AMATS) serves Summit and Portage counties. The Erie Regional Planning Commission (ERPC) serves the City of Vermilion in Lorain County. Ashtabula County is not part of a Metropolitan Planning Organization.

New United States Department of Transportation (USDOT) conformity determinations are required every time a new Transportation Improvement Program (TIP) or Regional Transportation Plan is completed or updated. New emissions analyses are required to meet the conformity rule requirement of using the latest planning assumptions. AMATS has updated its travel demand model to conduct this analysis considering the latest planning assumptions.

This conformity analysis reflects the aggregate regional mobile emissions generated by vehicles using the transportation system recommended in the Regional Transportation Plan and TIP. Conformity is demonstrated when the forecasted regional emissions are below the applicable State Implementation Plan (SIP) budgets that have been established by Ohio EPA.

Before analysis began, an interagency consultation call (IAC) took place on November 13, 2024. The Minutes from the IAC are included on page A-8.

Methodology

In order for the Cleveland-Akron-Lorain area to complete the regional emissions analysis, the overall level of pollution (both ozone and PM_{2.5}) resulting from mobile sources must be forecasted.

The ozone-related portion of this air quality analysis must demonstrate that daily Volatile organic compounds (VOC) and nitrogen oxides (NO_x) emissions from mobile sources will not exceed those established in the budget contained in the SIP for ozone, which sets the allowable limits for each pollutant in the Cleveland-Akron-Lorain area. The budgets for the 2015 8-hour ozone standard are from the 2008 SIP and were set on January 6, 2017. The budgets for the 2008 8-hour ozone standard are based on the 1997 SIP and were set on March 19, 2013. The ozone analyses are shown in Tables A-1 and A-2.

Similarly, the PM_{2.5}-related portion of the air quality analysis has to demonstrate that annual direct PM_{2.5} and nitrogen oxides (NO_x) emissions from mobile sources will not exceed those found in the budget established by Ohio Environmental Protection Agency (OEPA). The budgets for the 2006 PM_{2.5} standard were set on July 26, 2013. The budgets for the 2012 PM_{2.5} standard are based on the 2012 SIP and were set on December 26, 2018. The PM_{2.5} analyses are shown in Tables A-3 and A-4.

The AMATS and ODOT are jointly responsible for travel demand modeling and air quality analysis for the Akron area. In December 2024, forecasted variables were approved as inputs to the model. The air quality analyses documented in this appendix involve the use of the travel demand and emissions models to analyze future regional mobile source emissions. Trip tables have been created using the latest planning assumptions and are based on the most recent forecasts of land use and socioeconomic data produced by AMATS.

NOACA and ODOT are jointly responsible for travel demand modeling and air quality analysis for its area. Emissions for Ashtabula County are generated using current ODOT traffic volume data and growth rates.

In order to determine mobile source impacts on regional ozone and PM_{2.5} levels, all non-exempt TO2050 (and TIP) projects follow the code of Federal Regulations (CFR) 40 CFR Part 93, as related to EPA's air programs. These projects have been coded into the travel demand model for ozone analysis years of 2027, 2030, 2040, and 2050; and for PM_{2.5} analysis years of 2022, 2027, 2030, 2040, and 2050. The projects coded in each network are listed in Exhibits A-1 through A-4. Once the AMATS travel demand model was run for each of the analysis years described above, the traffic assignment results were post-processed and input into EPA's Motor Vehicle Emission Simulator (MOVES4). The MOVES simulator is an emissions modeling system that estimates air pollution emissions for criteria air pollutants, greenhouse gases and air toxics. MOVES covers on road vehicles such as cars, trucks and buses, and nonroad equipment such as bulldozers and lawnmowers. MOVES does not cover aircraft, locomotives, and commercial marine vessels. The output from MOVES4 includes VOC and NO_x for ozone; and direct PM_{2.5} and NO_x for PM_{2.5}.

The AMATS area results have been combined with the NOACA and Ashtabula County results to complete the conformity analysis for the entire Cleveland-Akron-Lorain ozone and PM_{2.5} nonattainment area. The conformity analysis results for the entire region were available for public comment during the public involvement period from March 11 – April 11, 2025.

Results

The analysis for the ozone standards must show that VOC and NO_x emissions from mobile sources will not exceed those established in the budget contained in the SIP, which sets the allowable limits for each pollutant. Table A-1 shows the results of the MOVES4 analysis for the 2015 8-hour ozone standard for the Cleveland-Akron-Lorain serious non-attainment area.

The data in Table A-1 confirms ozone precursor emissions for the 2015 8-hour ozone standard in the Cleveland-Akron-Lorain serious nonattainment area does not exceed the budgets for either VOC or NO_x.

Table A-1 2015 8-Hour Ozone Test Cleveland-Akron-Lorain Mobile Source Ozone Precursor Emissions Forecasts					
Volatile Organic Compounds (VOC) (tons/day)					
	2027 Emissions	2030 8-Hour Budget	2030 Emissions	2040 Emissions	2050 Emissions

Attainment status: 2015 8-Hour Ozone standard — serious nonattainment area (Federal Register / Vol. 89, No. 242 / Tuesday, December 17, 2024)
 SIP Status: Federal Register /Vol. 82, No. 4 /Friday, January 6, 2017 — direct final rule adequacy finding for the Motor Vehicle Emission Simulator (MOVES) based 2008 ozone standard Motor Vehicle Emission Budget (MVEB). No submittals required under 2008 8-Hour ozone standard until approved budgets are received. The budgets found adequate for 2008 standard will satisfy the 2015 tests, per U.S. EPA.
 8-Hour Geography: Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, Summit Counties, OH
 Conformity Tests: 2008 Standard 8-Hour budget tests
 Analysis Years: 2027 Attainment and 1st Analysis year; 2030 Interim and SIP Budget year; 2040 Interim year; 2050 Plan horizon year

Table A-2 shows the results of the MOVES4 analysis for the 2008 8-hour ozone standard for the Cleveland-Akron-Lorain maintenance area. This analysis must show that VOC and NO_x emissions from mobile sources will not exceed those established in the budget contained in the SIP, which sets the allowable limits for each pollutant. Table A-2 confirms ozone precursor emissions do not exceed the budgets for either VOC or NO_x.

SFY2026-2029 Transportation Improvement Program (TIP)**Air Quality Conformity Interagency Consultation Conference Call Minutes****November 13, 2024, 3:00 p.m., Teams Virtual Meeting****SFY2026-2029 Transportation Improvement Program (TIP)****Air Quality Conformity Interagency Consultation Conference Call Minutes**

Present: Erie County Regional Planning Commission (ERPC)
Akron Metropolitan Areawide Transportation Study (AMATS)
Northeast Ohio Areawide Coordinating Agency (NOACA)
Ohio Department of Transportation, Statewide Planning (ODOT)
Ohio Environmental Protection Agency (Ohio EPA)

Logistics: November 13, 2024, 3:00 p.m., Teams Virtual Meeting

I. Purpose

A formal interagency consultation (IAC) process is required in each nonattainment and maintenance area to address technical and procedural issues related to air quality planning. The Cleveland, Akron, and Erie County, Ohio metropolitan planning organizations (MPOs) (NOACA, AMATS and ERPC) are updating their SFY2026-2029 TIPs. The TIPs are part of the MPOs' existing long-range transportation plans (LRTPs).

II. Discussion

- The IAC call began at 3:00 p.m.
- AQ status reviewed for Northeast Ohio review of PM_{2.5} and Ozone
- Parties discussed the current and future attainment status of Northeast Ohio, but it did not need to be reflected in the upcoming conformity analysis
- OEPA expected the bump up to serious nonattainment for ozone this week
- AMATS asked if this needed to be reflected with the conformity analysis for the TIP
- OEPA stated that the status will change from moderate nonattainment to serious nonattainment for ozone
- NOACA stated that the standard for fine particulate matter will not be reflected on the agenda
- OEPA didn't anticipate an official designation until 2026

- All parties agreed on the geographic scope of the analyses, which includes the five NOACA counties (Cuyahoga, Geauga, Lake, Lorain, and Medina), the two AMATS counties (Portage and Summit) and Ashtabula County
- ODOT recommended removing Geauga County and Ashtabula Township from the 2006 PM_{2.5}
- Parties discussed applicable TIP budgets
- No parties objected to keeping current TIP budgets
- NOACA stated that since the statuses had not changed, the same TIP budget might apply
- Parties discussed analysis years – CY 2024, 2030, 2040, 2045 (AMATS and ERPC), 2050
- Parties discussed whether to retain or remove the 2045 budget
- AMATS did not believe they need to keep analysis year 2045, but that it might be a question for the EPA. AMATS' next plan will be 2050, therefore, unless the budget year includes 2045, it is not needed as an analysis year
- NOACA stated that the future years usually matched with the LRTP
- AMATS stated for the LRTP year we have to have intermediate years no more than 10 years for the air quality calculations for the analysis, but for the budget years they are not sure how they are calculated
- ODOT cited 40 CFR 93.106 for reference
- NOACA will follow up with EPA to determine if 2045 is needed
- AMATS stated that in the last TIP, the budget year for ozone was 2030. For PM_{2.5} it was 2022
- All parties agreed to concur later regarding the budget years
- Parties agreed to use MOVES 4.0
- Parties confirmed the geographic division for the analysis
- NOACA will complete the conformity analysis for Cuyahoga, Geauga, Lake, Lorain, and Medina Counties
- ODOT and AMATS will work together to run the analysis for Portage and Summit Counties
- ODOT will also do the additional analysis for Ashtabula County
- Parties agreed on county representation for conformity analysis
- NOACA will use Lorain County as its model
- ODOT will use Summit County as its model for AMATS
- NOACA will work with ODOT to complete post processing

- NOACA will complete the conformity documentation after post processing
- NOACA stated that the first draft of TIP will be uploaded for USDOT review January 31. Draft STIP and TIP will include all components for review
- All parties agree on dates for conformity analyses that will be provided for consideration by their Technical Advisory and Policy Committees for approval. NOACA will distribute the conformity analyses
- AMATS by January 16, 2025 for their February 6 Technical Advisory Committee and February 13 Policy Committee
- EPRC by January 16, 2025 for their January 23 Policy Committee
- NOACA agreed to complete the conformity documentation and submit it for approval
- ODOT needs final Board resolutions
- The Public Involvement Period takes place March 11-April 11. NOACA explains that the draft TIP will be completed, but Board approval will not take place until March 14th, 2025
- ODOT agreed to speak to NOACA about their options moving forward outside this meeting
- ODOT agreed to assist NOACA with post processing
- ODOT asked for clarification regarding questions concerning TIP budgets
- OEPA will investigate appropriate TIP budgets
- ODOT stated that Columbus, Cincinnati, and Dayton will also inquire about TIP budgets
- OEPA did not anticipate Columbus and Dayton going into nonattainment for PM_{2.5}
- OEPA stated that Canton will be recommended not to be designated as nonattainment under the new standard. An exceptional events demonstration will be submitted for the wildfire smoke influence days of 2023
- NOACA clarified that this will be sent out to partners who were unable to attend the meeting
- NOACA and OEPA agrees to look into budget years
- The IAC call concluded at 3:41pm

Addendum

After the November 13th IAC call, AMATS and NOACA coordinated with the planning partners to get concurrence on the following outstanding issues:

The appropriate analysis and budget years for ozone and PM_{2.5}; and whether to include 2027 (serious area attainment year for ozone) in this year's TIP and remove 2024.

The planning partners concur that the budget and analysis years as input to the SFY 2026-2029 TIP are as follows:

Ozone	2027 Emissions	2030 8-Hour Budget	2030 Emissions	2040 Emissions	2050 Emissions
PM _{2.5}	2027 Emissions	2030 8-Hour Budget	2030 Emissions	2040 Emissions	2050 Emissions

The budget and analysis years apply to all the ozone and PM_{2.5} standards. These include the following:

OZONE 2015 8-hour ozone standard (serious nonattainment area)

2008 8-hour ozone standard (maintenance area)

PM_{2.5} 2006 Annual Standard (maintenance area)

2012 Annual Standard (maintenance area) - this only includes the areas of Cuyahoga and Lorain Counties, OH

Appendix B | AMATS Financial Plan

Transportation Outlook 2050 must provide a vision for the future while also considering the realistic environment for transportation projects costs versus anticipated revenues. The purpose of the Financial Plan is to ensure that TO2050 is in fiscal constraint. Fiscal constraint means that future projects in the plan do not exceed expected revenues.

The Financial Plan forecasts revenues and project costs. Project costs and revenues must be projected in year of expenditure dollars. This means that both costs and revenues needed to be assigned inflation rates.

Overall, AMATS projected \$9,338,826,848 of funds to be available. This analysis ensures Transportation Outlook 2050 is in fiscal constraint.

Highway Recommendation Methodology

To maintain fiscal constraint for future highway projects, AMATS first developed an estimate of highway revenues. The revenues are shown to the right:

The growth rates used to project federal and state funding were based on estimates provided by ODOT. These growth rates were applied to the historical average and compounded to determine the financial forecast projections for short, medium, and long term years of the Plan.

For local funds historical data from the BMV for license plate registration fees and permissive taxes was obtained for 2023 for Summit, Portage, and Wayne Counties. Historic fuel tax data distributed to the counties, municipalities, and townships was obtained for 2023 from the Ohio Department of Taxation. AMATS applied a 2.5 percent growth rate for 2024 and 2025. In 2026 through 2050 a 0% growth rate was applied to that historical average and all years were totaled to determine the 2050 financial forecast.

With revenues established, it was necessary to assign inflation costs to each project recommendation. The table below shows the rates of inflation used to forecast project costs. Highway projects were assigned inflation rates based on the Ohio Department of Transportation's (ODOT) July of 2024 Construction Cost Outlook and Forecast through 2030. AMATS assumed a flat 2.0% per year for the out years. All projects are shown in 2026 costs so the inflation rate is 0.0%.

With inflation rates established, the next step was to estimate what year projects would take place to get an accurate inflated cost. The table on the following page shows project cost in year of expenditure dollar and the time band for which the project is expected to occur.

Table B-1 Highway Revenues Through 2050	
Federal	\$2,786,033,200.25
State	\$1,985,294,868.53
Local	\$2,100,398,008.72
Final Highway:	\$6,871,726,077.50

Table B-2 Inflation rate per year	
2026	0.0%
2027	5.0%
2028	4.0%
2029	3.5%
2030	2.1%
2031-2050	2.0% per year

TRANSPORTATION OUTLOOK 2050

Preservation funds were estimated over the life of the plan and were assumed to be distributed equally over the life of the plan. The AMATS program is included in total and considered to be in year of expenditure dollars. Highway project costs are provided already inflated to year of expenditure dollar by ODOT which is why the expenditures are unchanged in the year of expenditure versus current cost. The plan also shows funds reserved for unspecified safety and operation projects, as well as \$35 million reserved for bicycle and pedestrian enhancements.

The table below demonstrates fiscal constraint for highway recommendations in Transportation Outlook 2050.

Table B-3 Highway Financial Constraint Analysis						
FY2026-2050						
Total Revenue				\$6,871,726,078		
Maintenance Recommendations				Year of Expenditure	Current Cost	Year of Expenditure Cost

Bicycle and Pedestrian Recommendation Methodology

Bicycle and Pedestrian improvements are funded through the estimated highway revenues. AMATS reserved over \$35 million for potential bicycle and pedestrian improvements in the greater Akron area. Bicycle and pedestrian project costs are inflated based on the highway methodology. The table below demonstrates how funds reserved for bicycle and pedestrian projects will be spent and are inflated to year of expenditure. Bicycle and Pedestrian improvements are assumed to be covered mostly through additional local or state funds outside of funding projected by AMATS. These funding sources include Park District sources, Clean Ohio Funds, and local community park funds. According to the AMATS Funding Policy, only \$1,000,000 may be used on bicycle or pedestrian project per round of funding, therefore AMATS assumes that bicycle and pedestrian projects will either receive funds in multiple rounds or local or state funds will cover the remaining construction cost.

TRANSPORTATION OUTLOOK 2050

Transit Recommendation Methodology

Transit funding data for both Metro RTA and PARTA was collected over the last five years to estimate the amount of federal, state and local funding expected to be available. The growth rates used to forecast transit funding assumed 1.25 percent growth in 2026-2028 and then 0 percent through 2050.

Local funds were projected based on past transit financials reported in each agencies' CAFR. The 2023 estimated totals for METRO and PARTA were added together and were used as the baseline for future projections. The growth rates used to forecast local transit funding were assumed the same as the rates for federal funding growth.

Table B-5 | Transit Revenues Through 2050

Federal and State Revenue	\$411,269,494.94
Local Revenue	\$2,055,831,275.47

TRANSPORTATION OUTLOOK 2050

Transit costs were inflated based on ODOT's July of 2024 Construction Cost Outlook and Forecast through 2025. AMATS used ODOT's short term inflation rate for transit projects through 2030. A 2 percent inflation rate was estimated for years 2031-2050. The inflation rate applied to projects is as follows:

With inflation rates established, the next step was to estimate what year projects would take place to get an accurate inflated cost. The following table shows project cost in year of expenditure dollar and the time band for which the project is expected to occur. Operating expenses to maintain the system were projected annually and operation expenses for additional new services were added when service is projected to start.

Table B-6 Inflation rate per year	
2026	0.0%
2027	5.0%
2028	4.0%
2029	3.5%
2030	2.1%
2031-2050	2.0% per year

Appendix C | Demographics

Demographics

AMATS examines different demographics of our region when crafting various local plans.

- Elderly
- Minorities
- Low income
- Carless Households
- Individuals with Disabilities
- Birth Rates
- Marriage Rates

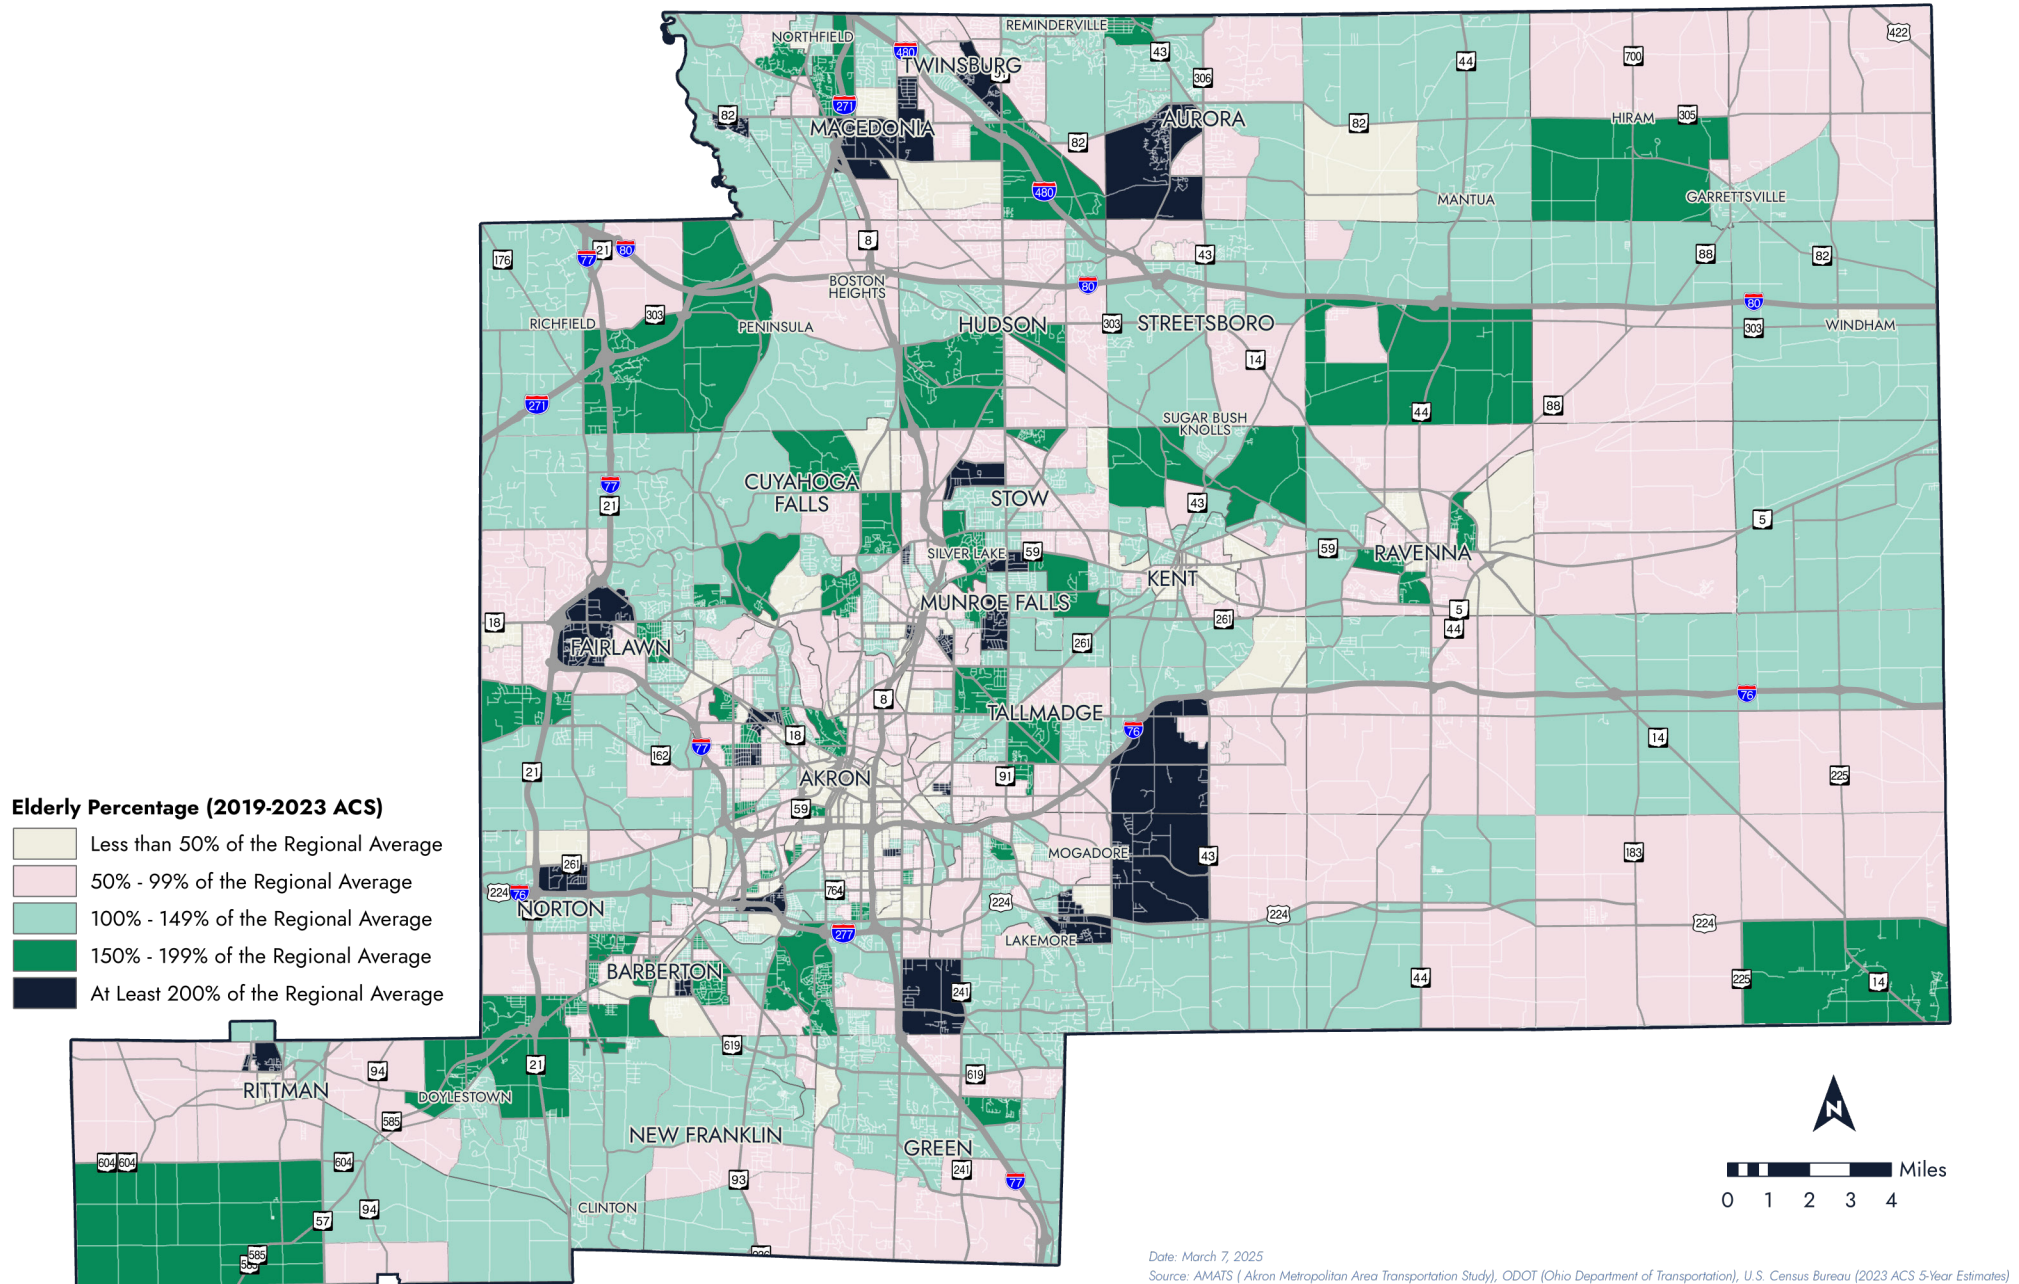

Recently examined demographic groups based on ACS-2019-2023 Data

Elderly populations are defined as being aged 65 and older. Within the AMATS planning area, many of the areas of high elderly populations are outside of the high-density urban core—cities like Akron (South Akron, particularly Firestone Park and Ellet), Fairlawn, Barberton/Norton, Cuyahoga Falls, Aurora and Macedonia —though higher elderly populations can be found throughout the region, even within portions of those cities. High concentrations of the senior population can also be found in more affluent communities such as Silver Lake (27%), Peninsula (24%) and Richfield (24%). Larger percentages of elderly populations are in suburban condominiums or senior-specific apartment developments throughout the AMATS region. This population is expected to increase in the following years as the Baby Boomer generation reaches retirement age, many of which will need some sort of transportation assistance as driving personal vehicles becomes more difficult or impossible for many.

Table C-1 Elderly Population (Cities and Villages)			
Community	Total Population	Elderly Population	% Elderly

Map C-1 | Elderly Population

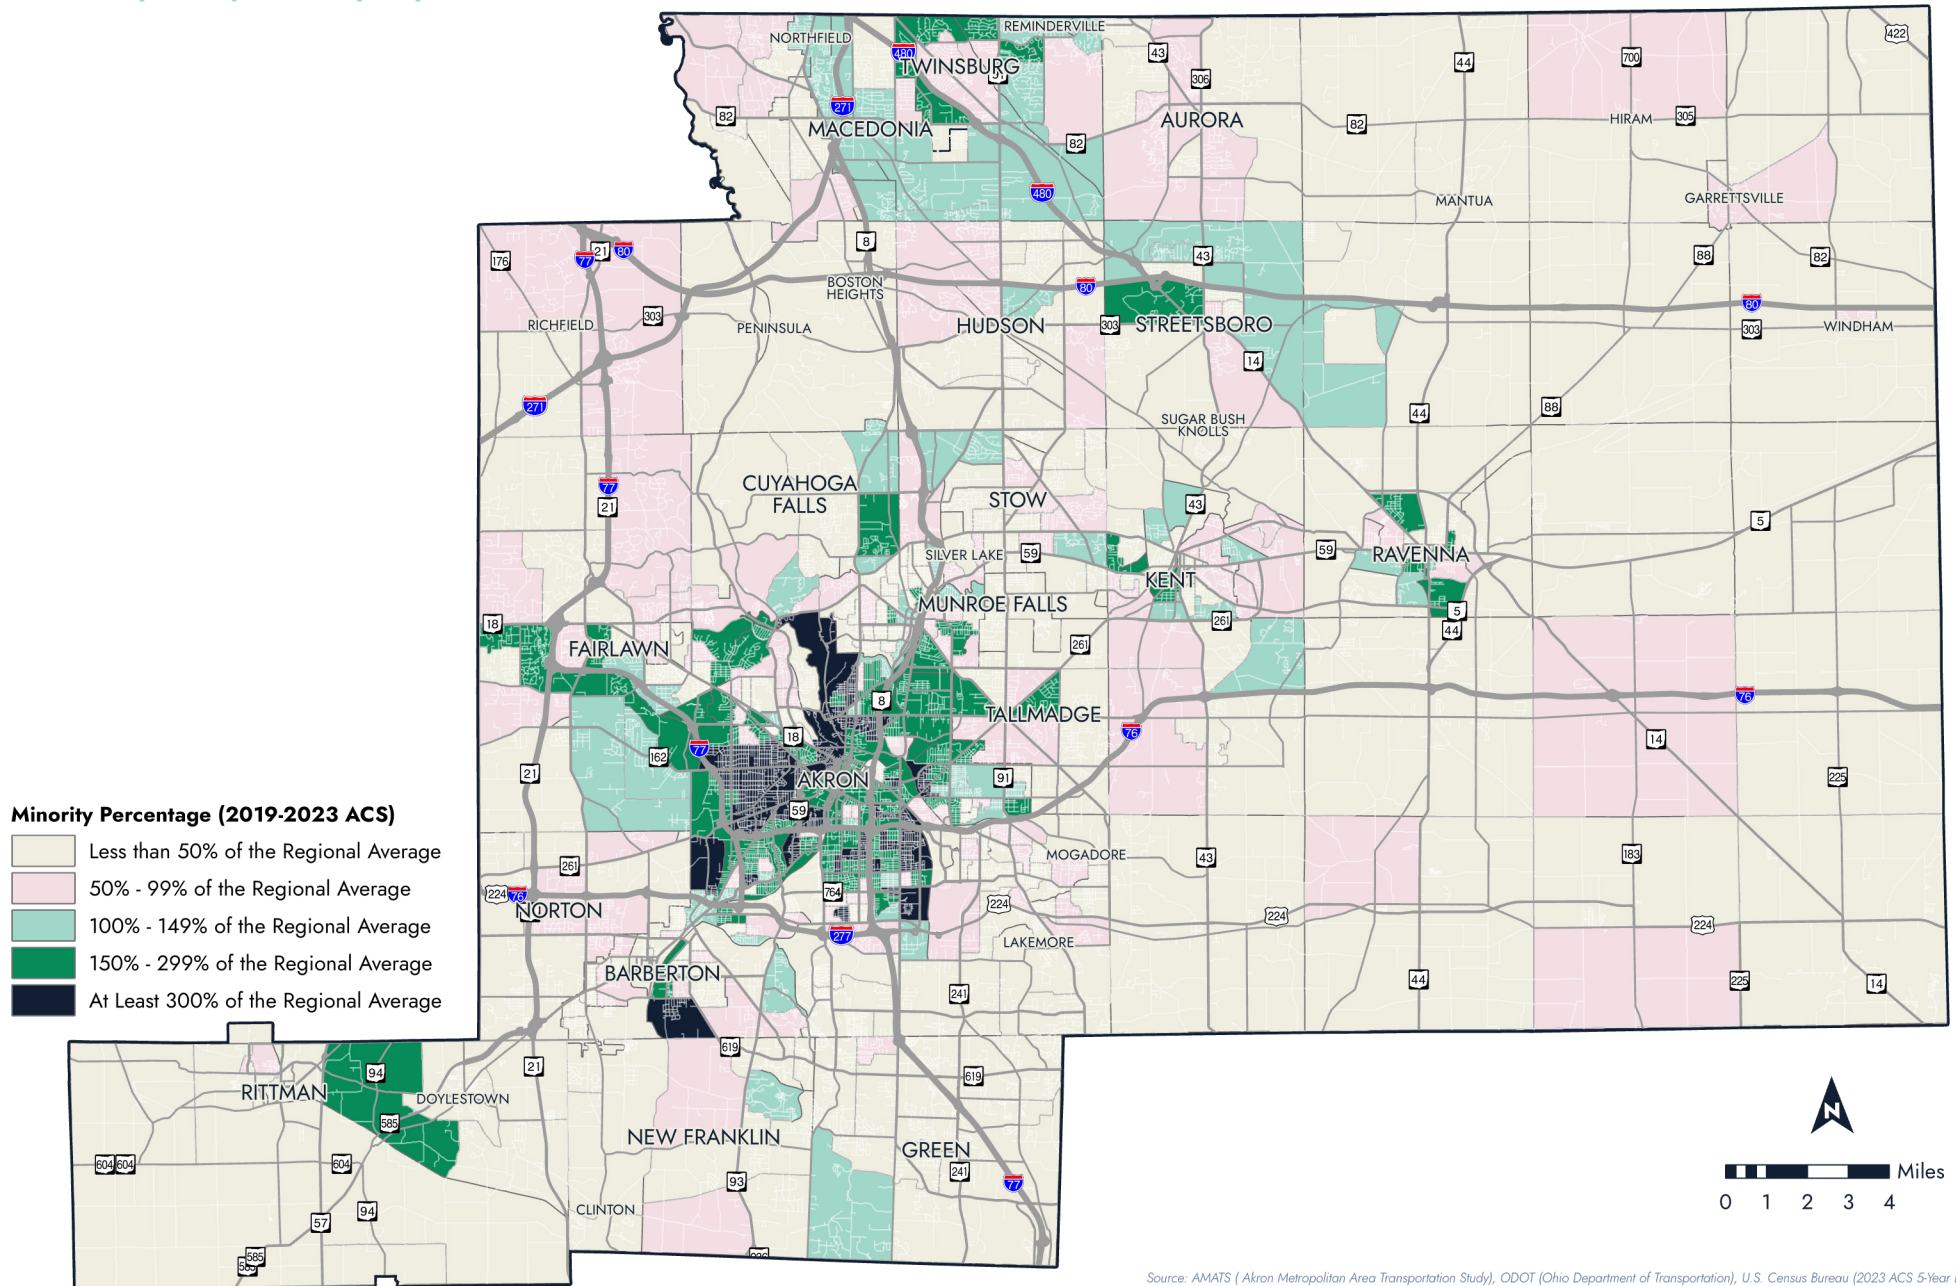

Minorities are defined as non-white populations. Within the Greater Akron area, black populations are by far the most common minority group, though several other minority populations exist throughout the area. The highest concentrations of minority populations are in the Akron (52%), particularly in West Akron and, to a slightly lesser extent, in the Middlebury, East Akron, and North Hill sections of the city. There is also a high minority population in the Twinsburg Heights section of Twinsburg (36%). Other notable concentrations of minority populations can be found in portions of the cities of Fairlawn (30%) Kent (25%), Streetsboro (26%), Ravenna (24%) Barberton (21%), Cuyahoga Falls (21%).

Table C-2 Minority Population (Cities and Villages)

Map C-2 | Minority Population

Source: AMATS (Akron Metropolitan Area Transportation Study), ODOT (Ohio Department of Transportation), U.S. Census Bureau (2023 ACS 5-Year Estimates)

Low-Income is defined as the population receiving less annual income than the regional average. For this plan, individual income averages are presented below in the table and map. In the AMATS region, many of the lowest-income areas are within the City of Akron. Significant low-income populations are spread throughout the city, generally closer to its center. Additionally, some sections of the cities of Kent (30%), Ravenna (34%), Barberton (30%), and the Village of Windham (52%), have significant low-income populations. There are also block groups throughout the region with above-average low-income populations, particularly in rural areas.

Table C-3 Low-Income Population (Cities and Villages)			
Community	Total Population	Elderly Population	% Elderly
Windham	1,807	950	52.6%
Ravenna	11,286	3,882	34.4%
Akron	189,526	64,368	34.0%
Mantua	694	220	31.7%
Barberton	24,977	7,701	30.8%
Kent	27,190	8,193	30.1%
Northfield	3,525	830	23.5%

Source: American Community Survey - 2023 5-Year Estimates

Map C-3 | Low Income Population

Carless Households data is collected at the household level rather than the individual level and represents the percentage of households within each block group without a car. It's important to note that the reasons for this vary, including age, disabilities, lack of affordability, and personal choice. Some individuals may choose alternative transportation options, but still have access to a personal vehicle, while for many others, they're an essential part of life. A strong concentration of the region's carless households can be found within the city of Akron (13%), Kent (15%) and Ravenna (13%). There is a correlation between many of the lower income block groups within the city and carless households. Most of these tend to be in more walkable communities, block groups where large senior housing facilities exist, major universities (Kent State University and University of Akron) or, as in Northeastern Portage County, where Amish populations exist.

Table C-4 Carless Households (Cities and Villages)			
Community	Total Population	Elderly Population	% Elderly
Kent	10,180	1,559	15.3%
Ravenna	5,048	689	13.6%

Map C-4 | Carless Households

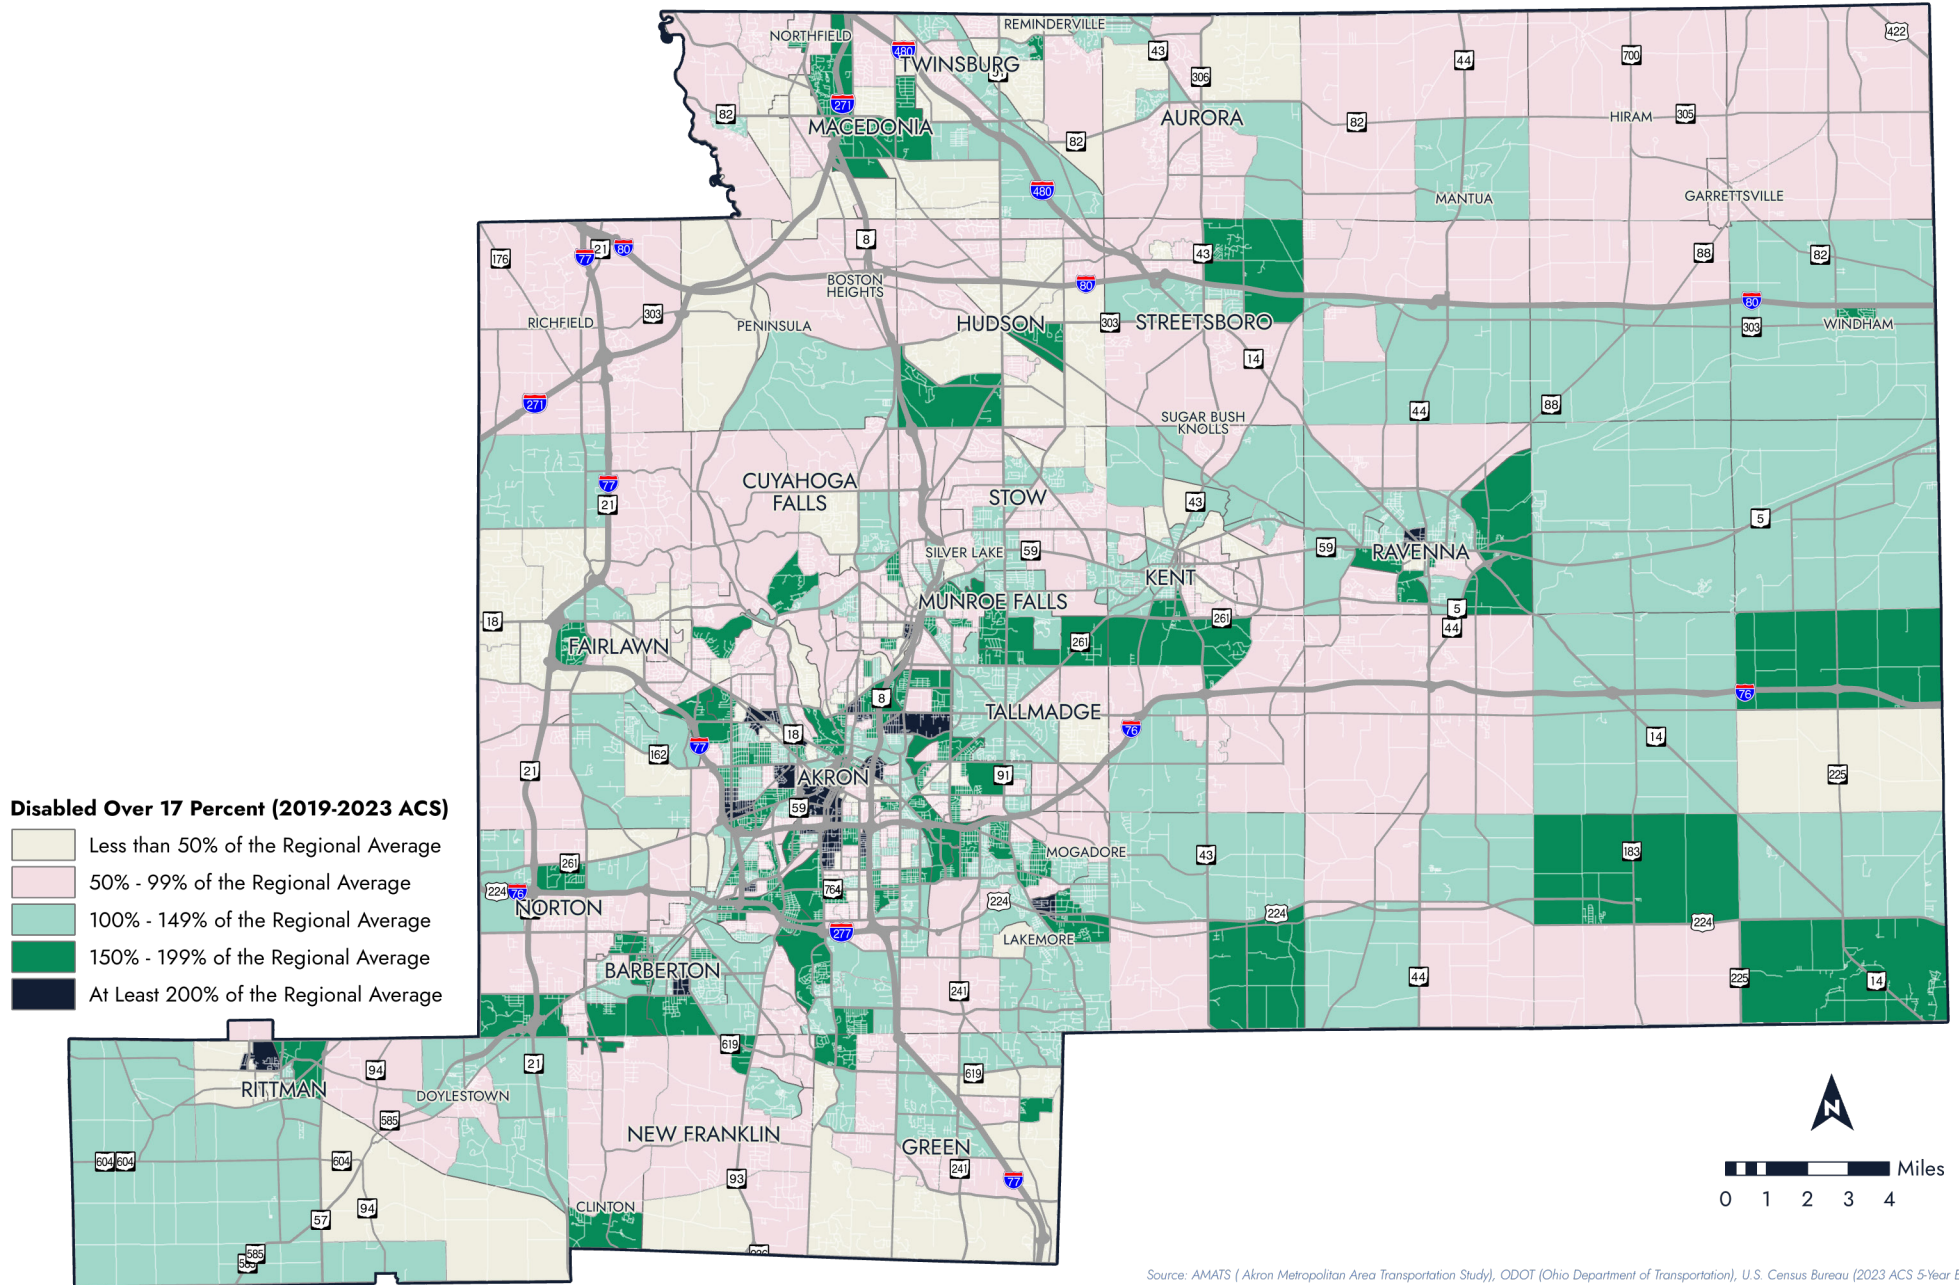

Source: AMATS (Akron Metropolitan Area Transportation Study), ODOT (Ohio Department of Transportation), U.S. Census Bureau (2023 ACS 5-Year Estimates)

Individuals with Disabilities are adults over the age of 17, who have hearing, vision, cognitive, ambulatory, self-care, or independent living difficulties. The disabled population is more geographically scattered than the other groups analyzed. Some of the areas with the highest percentage of disabled population are within the cities of Akron and Barberton, although both have many areas of below-average disabled populations, often in adjoining BGs. Other areas of above-average disabled populations can be found throughout all portions of the planning area.

Table C-5 Adults with Disabilities (Cities and Villages)			
Community	Total Population	Elderly Population	% Elderly
Windham	1,241	394	31.7%
Munroe Falls	3,998	968	24.2%
Clinton	936	192	20.5%
Barberton	18,906	3,740	19.8%

Map C-5 | Disabled Population

Source: AMATS (Akron Metropolitan Area Transportation Study), ODOT (Ohio Department of Transportation), U.S. Census Bureau (2023 ACS 5-Year Estimates)

Birth Rates are the number of individuals born in a population in given amount of time. Variables used for birth rates can be used on the census tract level. However, getting data from all census tracts in the nation is too large of a data set to retrieve so therefore we average births from all 50 states would produce a number that is way too large to compare to the averages at the AMATS census tract level at this moment. Therefore, to get some type of estimate of what the national average would be for census tracts we divided all the states totals by the number of census tracts in the state. This does infer that all the census tracts produced the same number of children for the state, which is known to not be true, but the estimate would give a better guess at what the national average will be based on census tracts. However, there were no differences in the map from regional averages to the estimated national averages implying that the AMATS area regional average is a good representation of the national average. When looking at the regional maps for birth rates throughout the AMATS region we find higher rates in areas of larger population in Akron, Fairlawn, Barberton, Cuyahoga Falls, Stow, Hudson and Tallmadge. Higher concentrations of birth rates are exhibited toward the northern portions of Summit and Portage Counties where the population is larger. Rural areas north of Mantua and near Randolph exhibit a higher concentration of regional and national birth rates.

Map C-6 | Birth Rates

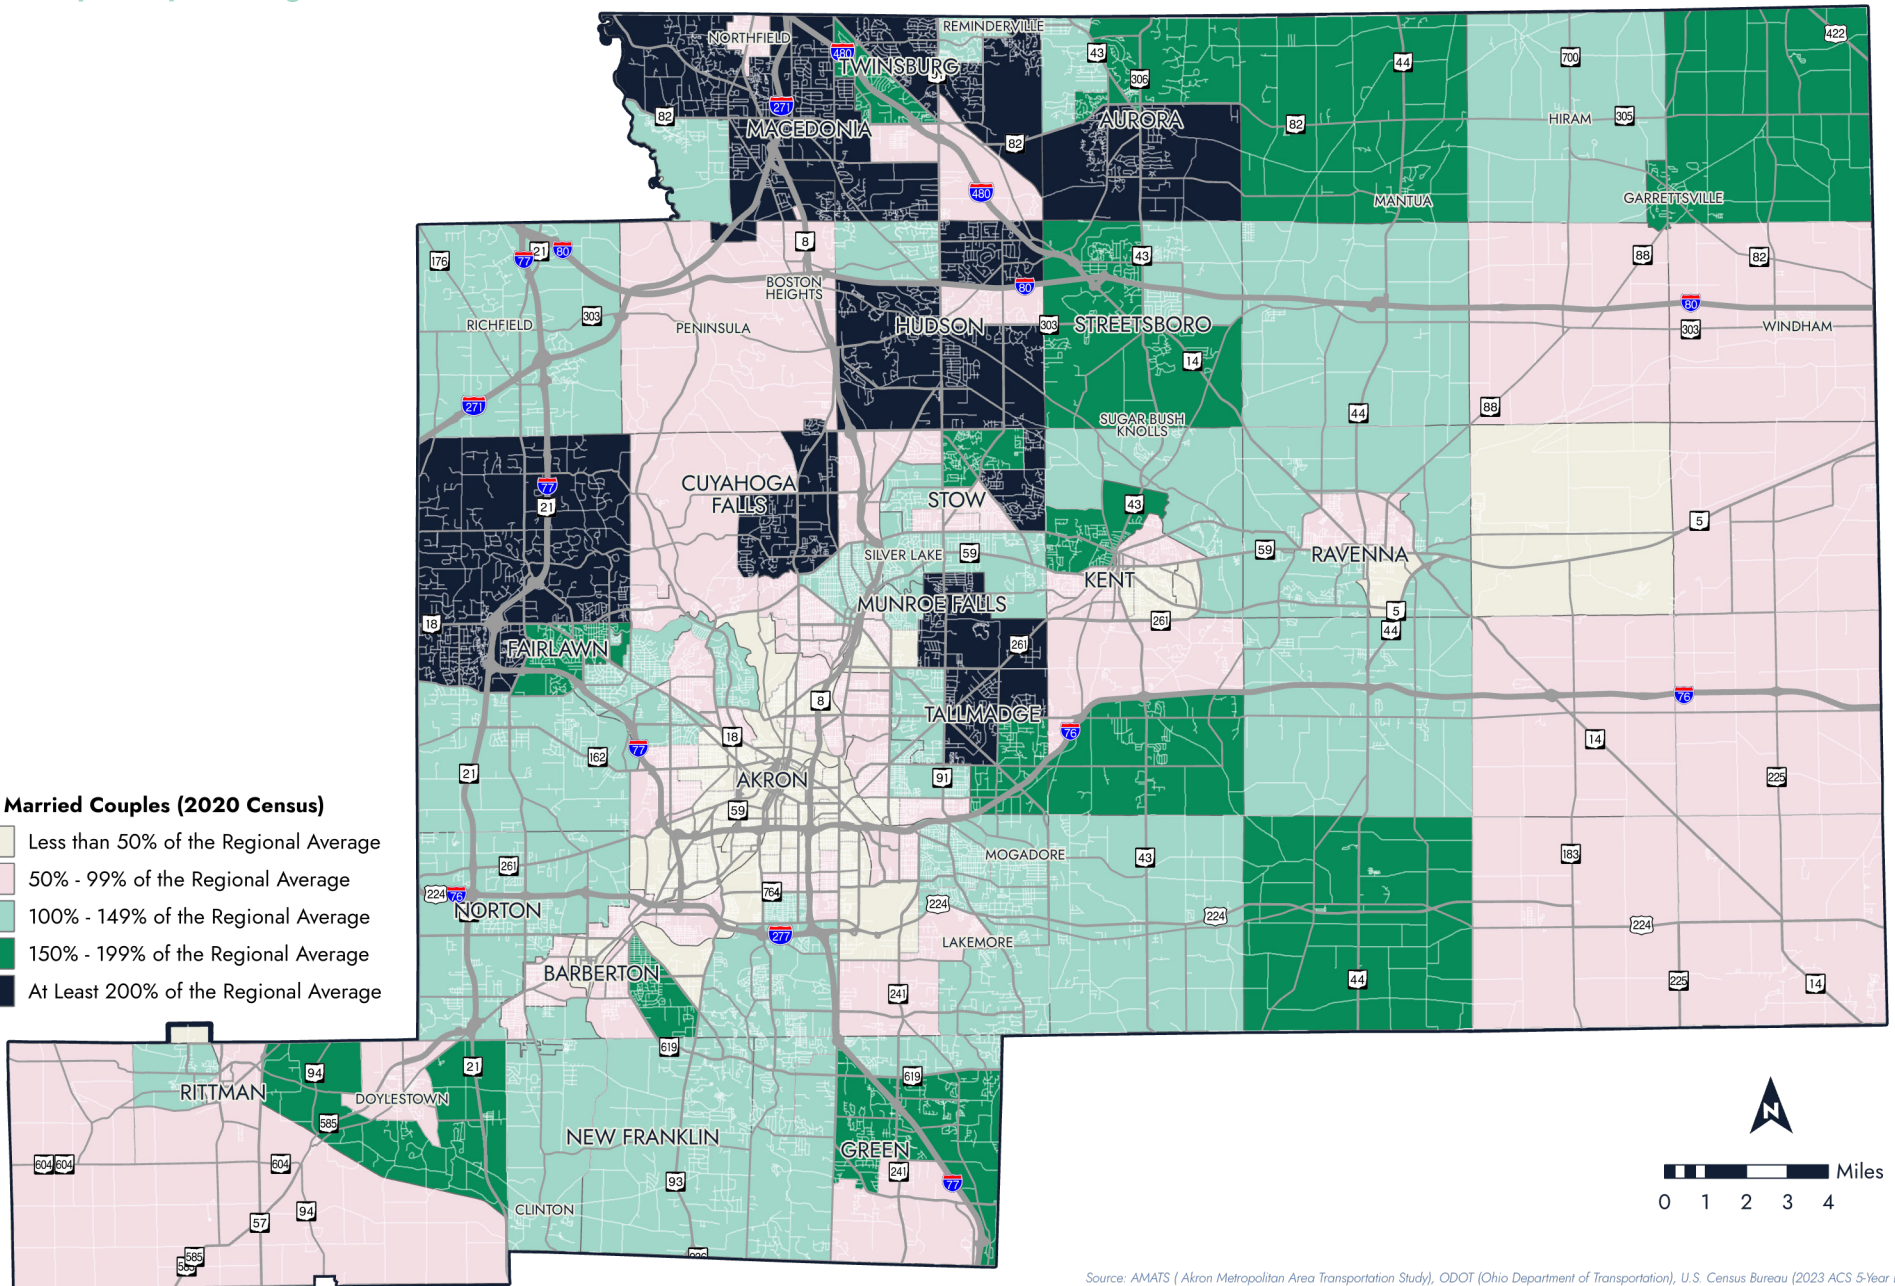

Source: AMATS (Akron Metropolitan Area Transportation Study), ODOT (Ohio Department of Transportation), U.S. Census Bureau (2023 ACS 5-Year Estimates)

Local **Marriage Rates** are defined as the ratio of marriages to the population of a particular area or during a particular period. The data used is from the 2020 Census, which shows a higher concentration of marriages throughout affluent suburban areas of Fairlawn, Bath, Richfield, Hudson, Aurora, Twinsburg and concentrations in Stow, Munroe Falls, Kent and Tallmadge.

Map C-7 | Marriage Rates

Total Married Couples (2020 Census)

- Less than 50% of the Regional Average
- 50% - 99% of the Regional Average
- 100% - 149% of the Regional Average
- 150% - 199% of the Regional Average
- At Least 200% of the Regional Average

Appendix D | Environmental Mitigation

Environmental resources have immeasurable benefits that affect the social well-being and long-term viability of local and regional economies. Transportation improvements generally stimulate new development and therefore can have potential adverse impacts on the natural environment. Transportation planning provides the opportunity to slow negative and costly environmental impacts by making transportation improvements that minimize adverse environmental impacts.

The National Environmental Policy Act (NEPA) and the *Infrastructure Investment and Jobs Act (IIJA)* require that transportation planning agencies like AMATS consider potential impacts to the surrounding natural and social environment, whether for new construction projects or maintenance activities in the greater Akron area. Because the recommendations in Transportation Outlook 2050 are eligible for federal transportation funds, all proposed federally funded projects are subject to federal environmental laws and rules including NEPA, Endangered Species Act, Fish and Wildlife Coordination Act, and the Clean Water Act.

AMATS utilized an environmental consultation process to identify the environmental impacts of TO2050 plan update. The ODOT Office of Environmental Services (OES) takes a lead role in consulting with environmental resource agencies to obtain the data and discuss review of Metropolitan Planning Organization's transportation plans.

It is important to note that environmental studies are very conceptual at the transportation planning stage. To address environmental impacts on transportation projects, AMATS includes a discussion of the types of environmental resources along with maps in the region of the most common environmental features in accord with federal requirements at the policy and/or strategic levels, not at the project-specific level. To advance any project to construction, additional environmental assessment and mitigation practices will need to be completed. For projects that use state or federal funds, this will include a detailed environmental study in compliance and consultation with NEPA, other federal, state and tribal wildlife, land management, regulatory agencies, and ODOT requirements.

Through ODOT's consultation with the environmental resource agencies and AMATS' own data collection activities, the analysis includes a discussion of environmental mitigation strategies as well as an environmental resource agencies contact list.

Environmental resources that have been identified for discussion in this Plan include:

- Air Quality
- Water Resources and Wetlands
- Threatened and Endangered Species
- Section 4(f) Parkland
- Stormwater Management
- Social and Economic Impacts

- Cultural Resources
- Environmental Vulnerability Impacts

The following sections include a brief description of the environmental resources that are regional in scope in the planning stage of development and may require a more thorough and detailed assessment as any project moves closer to construction phase. AMATS analyzed TO2050 projects for potential environmental impacts using GIS overlay techniques. When available, OES databases were enhanced with local or internal data sources.

Air Quality

The effect of vehicle emissions on air quality is a major consideration in transportation planning for the region. Individual vehicle trips may seem insignificant, but their cumulative effect is a major determinant in the region's air quality.

Air quality conformity demonstrates that the transportation programs in the region conform to applicable air quality standards. Individual vehicle trips may seem insignificant, but their cumulative effect is a major determinant in the region's air quality.

The AMATS region is required to participate in air quality conformity to attain the National Ambient Air Quality Standards (NAAQS) for various criteria pollutants. Summit and Portage counties are part of the eight-county Cleveland-Akron-Lorain Combined Statistical Area (CSA). This area includes Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage and Summit counties.

The MPOs and ODOT must reestablish conformity for the ozone standards and fine particulate matter (PM_{2.5}) standards as a result of adopting new TIP and LRP amendments. The conformity analysis demonstrates that emissions from vehicles traveling on the planned transportation system are less than the area's emissions budget (or other emissions target in the absence of an approved budget). AMATS updates its travel demand model periodically to conduct this analysis considering the latest planning assumptions.

As the United States Environmental Protection Agency (USEPA) continues to tighten the current ozone and fine particulate matter (PM_{2.5}) standards, the region may be required to implement more control measures on ozone and PM_{2.5}. While more controls may be necessary, much of the area's pollution originates outside the area and is carried by wind patterns into the region. AMATS provides the work necessary to support the Clean Air Act Amendments of 1990 and to satisfy any changes resulting from the newly proposed air quality standards.

The complete air quality conformity document and the associated results of the transportation conformity analyses for TO2050 are discussed in detail in **Appendix A**.

Water Resources and Wetlands

Lakes, rivers and streams are an integral part of the ecosystem and regional watersheds. They provide a relation between land and water resources, help to curb flooding by slowing down and absorbing excess rainwater, and provide a habitat for numerous plants and animals.

Wetlands are low-lying areas where the water table stands near, at, or above the land surface for at least part of the year. This results in specialized wet soil types and water dependent plants. Wetlands can provide ecosystem

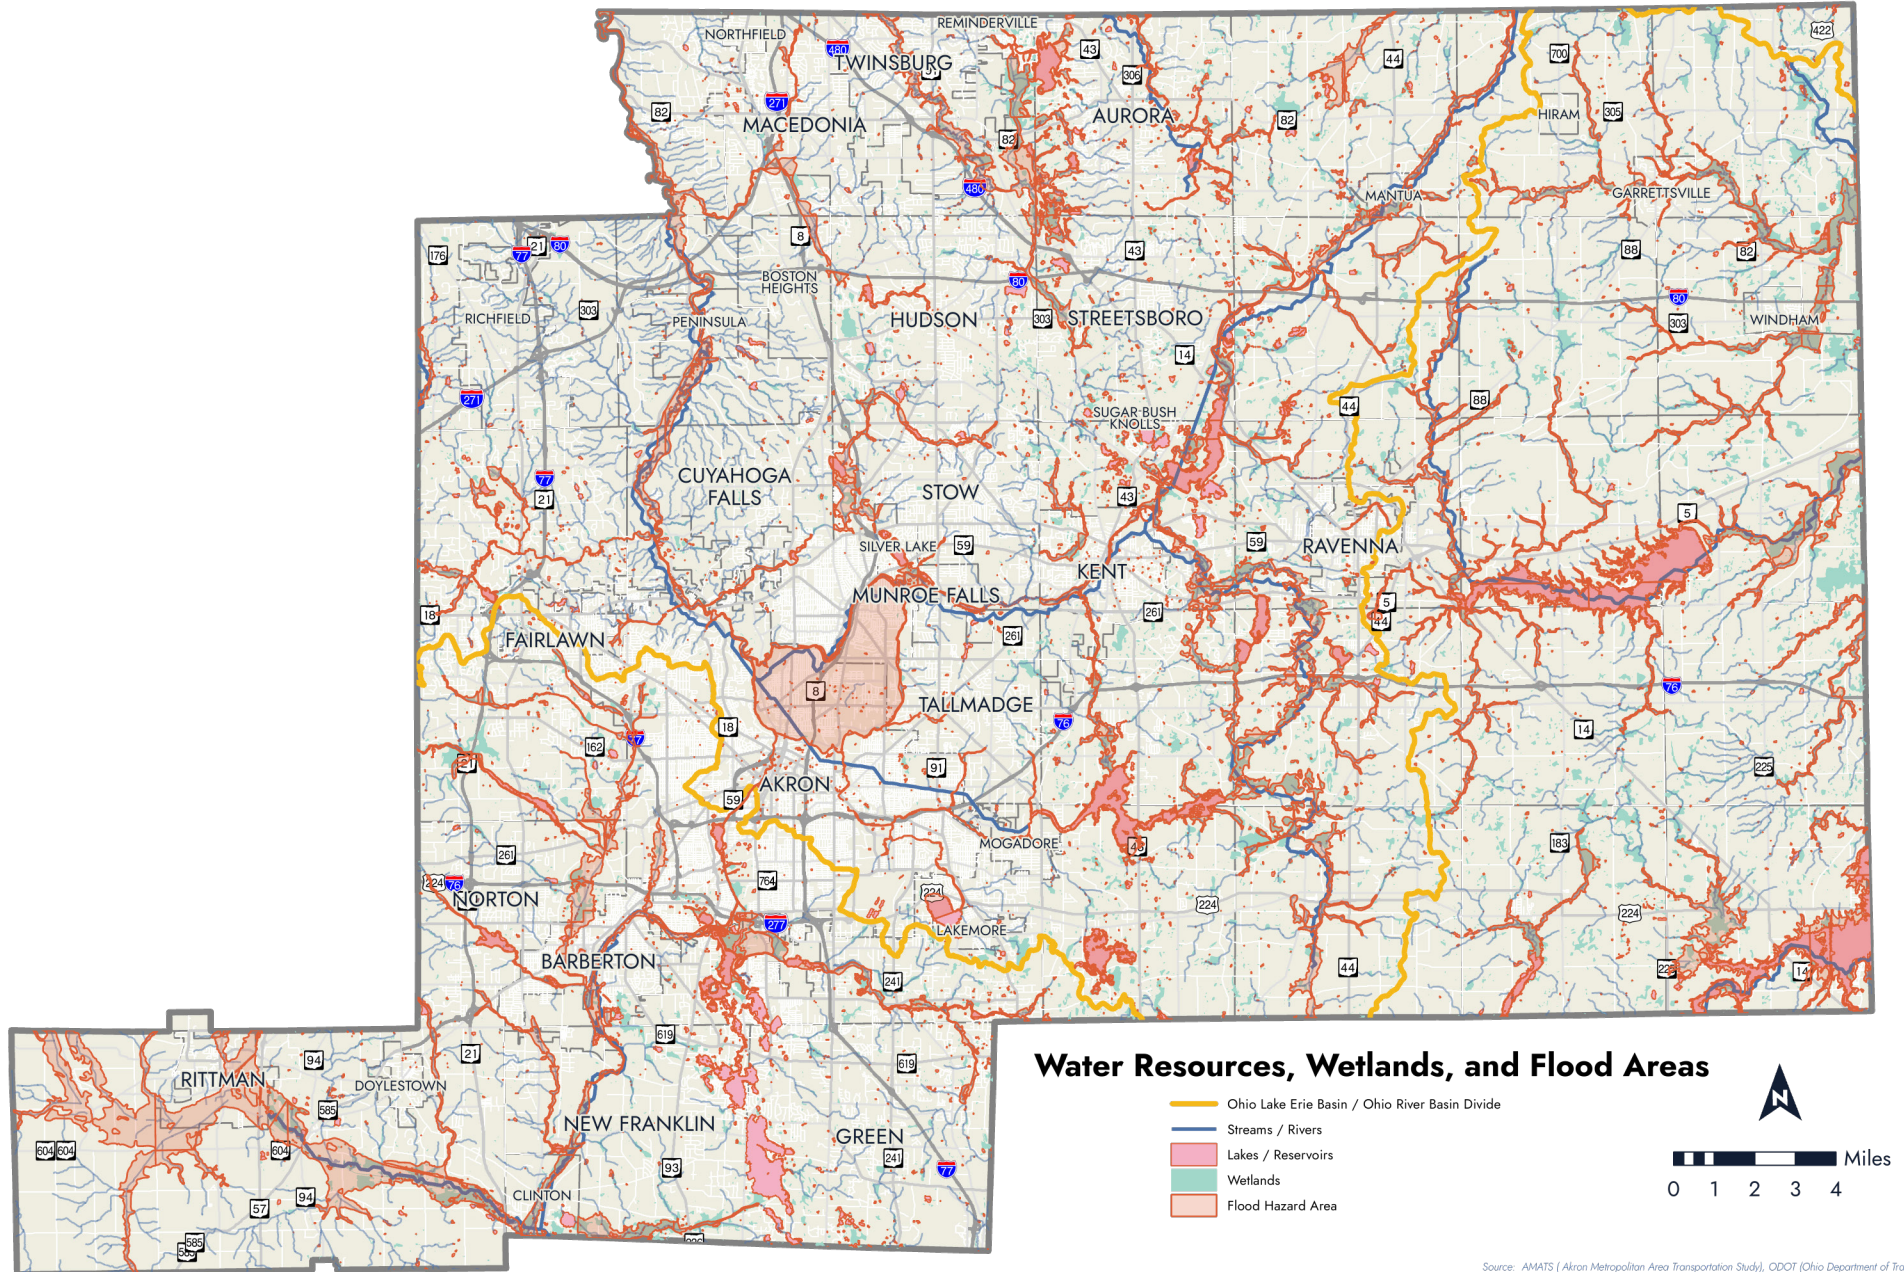

services including essential wildlife habitats for many plants and animals, and water filtration and storage to lessen and prevent storms and flood damage.

The Greater Akron area includes numerous streams and rivers, lakes, reservoirs, and wetlands. The two major rivers in the region are the Cuyahoga and the Tuscarawas. The Upper Cuyahoga River is a designated State Scenic River that runs through the AMATS area and extends from State Route 14 in Portage County to the north end at the Troy-Burton Township line in Geauga County. **Map D-1** includes the Greater Akron area's water resources and wetlands.

The OES along with project consultants coordinate all stream and wetland mitigation projects. This usually begins with a determination of mitigation needs in an Ecological Survey Report (ESR). A final mitigation plan would then be developed for submission to agencies prior to permit authorization.

Wetland mitigation measures may include mitigation banking, stream and wetland creation, restoration, or preservation.

Map D-1 | Water Resources and Wetlands

Threatened and Endangered Species

A great diversity of wildlife and plant communities exists throughout the state of Ohio as well as the Greater Akron area. Many species receiving federal or state protection are tied closely to their habitats. Land use changes have been the most common cause for the decline in species range and diversity. Contamination and degradation of natural waters has also contributed to loss of habitat. Loss of wetlands and forests has contributed largely to the federal and/or state listing of over 500 threatened and endangered plants and animals within Ohio, including a variety of mammals, birds, reptiles and amphibians, mollusks, butterflies, fish, and vascular plants.

The U.S. Fish & Wildlife Service (USFWS) and the Ohio Department of Natural Resources (ODNR) work together to protect endangered and threatened species in Ohio. The USFWS is the only agency in the federal government whose primary responsibility is the conservation and management of fish, wildlife, plants, and their habitats. The USFWS carries out this duty by adding species to the federal lists of endangered and threatened species based on their biological status and threats, as well as developing protective measures for listed species.

Ohio law allows the ODNR Division of Wildlife to adopt rules restricting the taking or possessing of native wildlife threatened with statewide removal, and to periodically update a list of endangered species as required by Ohio Revised Code 1531.25. The rules and regulations associated with these laws dictate that ODOT will build and operate their roadway projects with no, or minimal impacts to protected species and their habitat including potentially unoccupied habitat.

The ODNR uses **six categories: endangered, threatened, species of concern, special interest, extirpated, and extinct**, to further define the status of selected wildlife. This Plan addresses the first two categories of which a specific survey and environmental study is often undertaken during later stages of project development. ODOT coordinates with numerous regulatory agencies to determine if a threatened or endangered species is suspected of existing within a project area.

The Threatened and Endangered categories are defined as:

Threatened (T) – A species or subspecies whose survival in Ohio is not in immediate jeopardy, but to which a threat exists. Continued or increased stress will result in it becoming endangered.

Endangered (E) – A native species or subspecies threatened with extirpation from the state. The danger may result from one or more causes, such as habitat loss, pollution, predation, interspecific competition, or disease.

The Greater Akron area's ecosystem supports a variety of threatened and endangered wildlife and plant species. Portage County includes 114 different threatened and endangered species of wildlife and plants. Summit County includes 94 various threatened and endangered species of wildlife and plants; and the ODNR identifies 18 threatened and endangered species of wildlife and plants county-wide throughout Wayne County.

A complete list of threatened and endangered species for the state of Ohio and by county for the region can be viewed at the U.S. Fish and Wildlife Service and the ODNR Division of Wildlife at:

fws.gov/program/endangered-species/species and ohiodnr.gov/discover-and-learn/safety-conservation/about-ODNR/wildlife/state-listed-species.

A sample list of some of the threatened and endangered species in the Greater Akron area is noted below.

Wildlife Species

- Indiana Bat — E

Portage County

- Northern Harrier — E

Portage County

- Spotted Turtle — T

Portage County

- King Rail — E

Summit County

- Harlequin Darner (Dragonfly) — T

Summit County

- Barn Owl — T

Wayne County

- Riffle Snake Tail (Dragonfly) — E

Wayne County

Plant Species

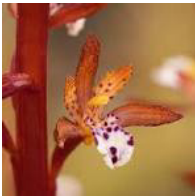

- Dragon's Mouth – E

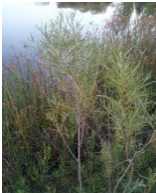

Portage County
- Swamp Birch – T

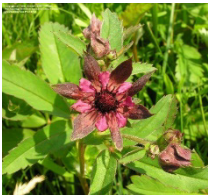

Portage County
- Spotted Coral-Root (Orchid) – E

Summit County
- Slender Willow – T

Summit County
- Marsh Five-finger – T

Wayne County
- Mud Sedge – E

Wayne County

Section 4(f) Parkland

Section 4(f) of the United States Department of Transportation (USDOT) Act protects publicly owned parks, recreation areas, wildlife and waterfowl refuges, and public or privately owned historic sites from adverse impacts resulting from the construction of federally funded transportation projects. Section 4(f) specifies that federally funded transportation projects requiring the use of land from a public park, recreation area, wildlife and waterfowl refuge, or land of historic significance can only occur if there is no feasible and prudent alternative.

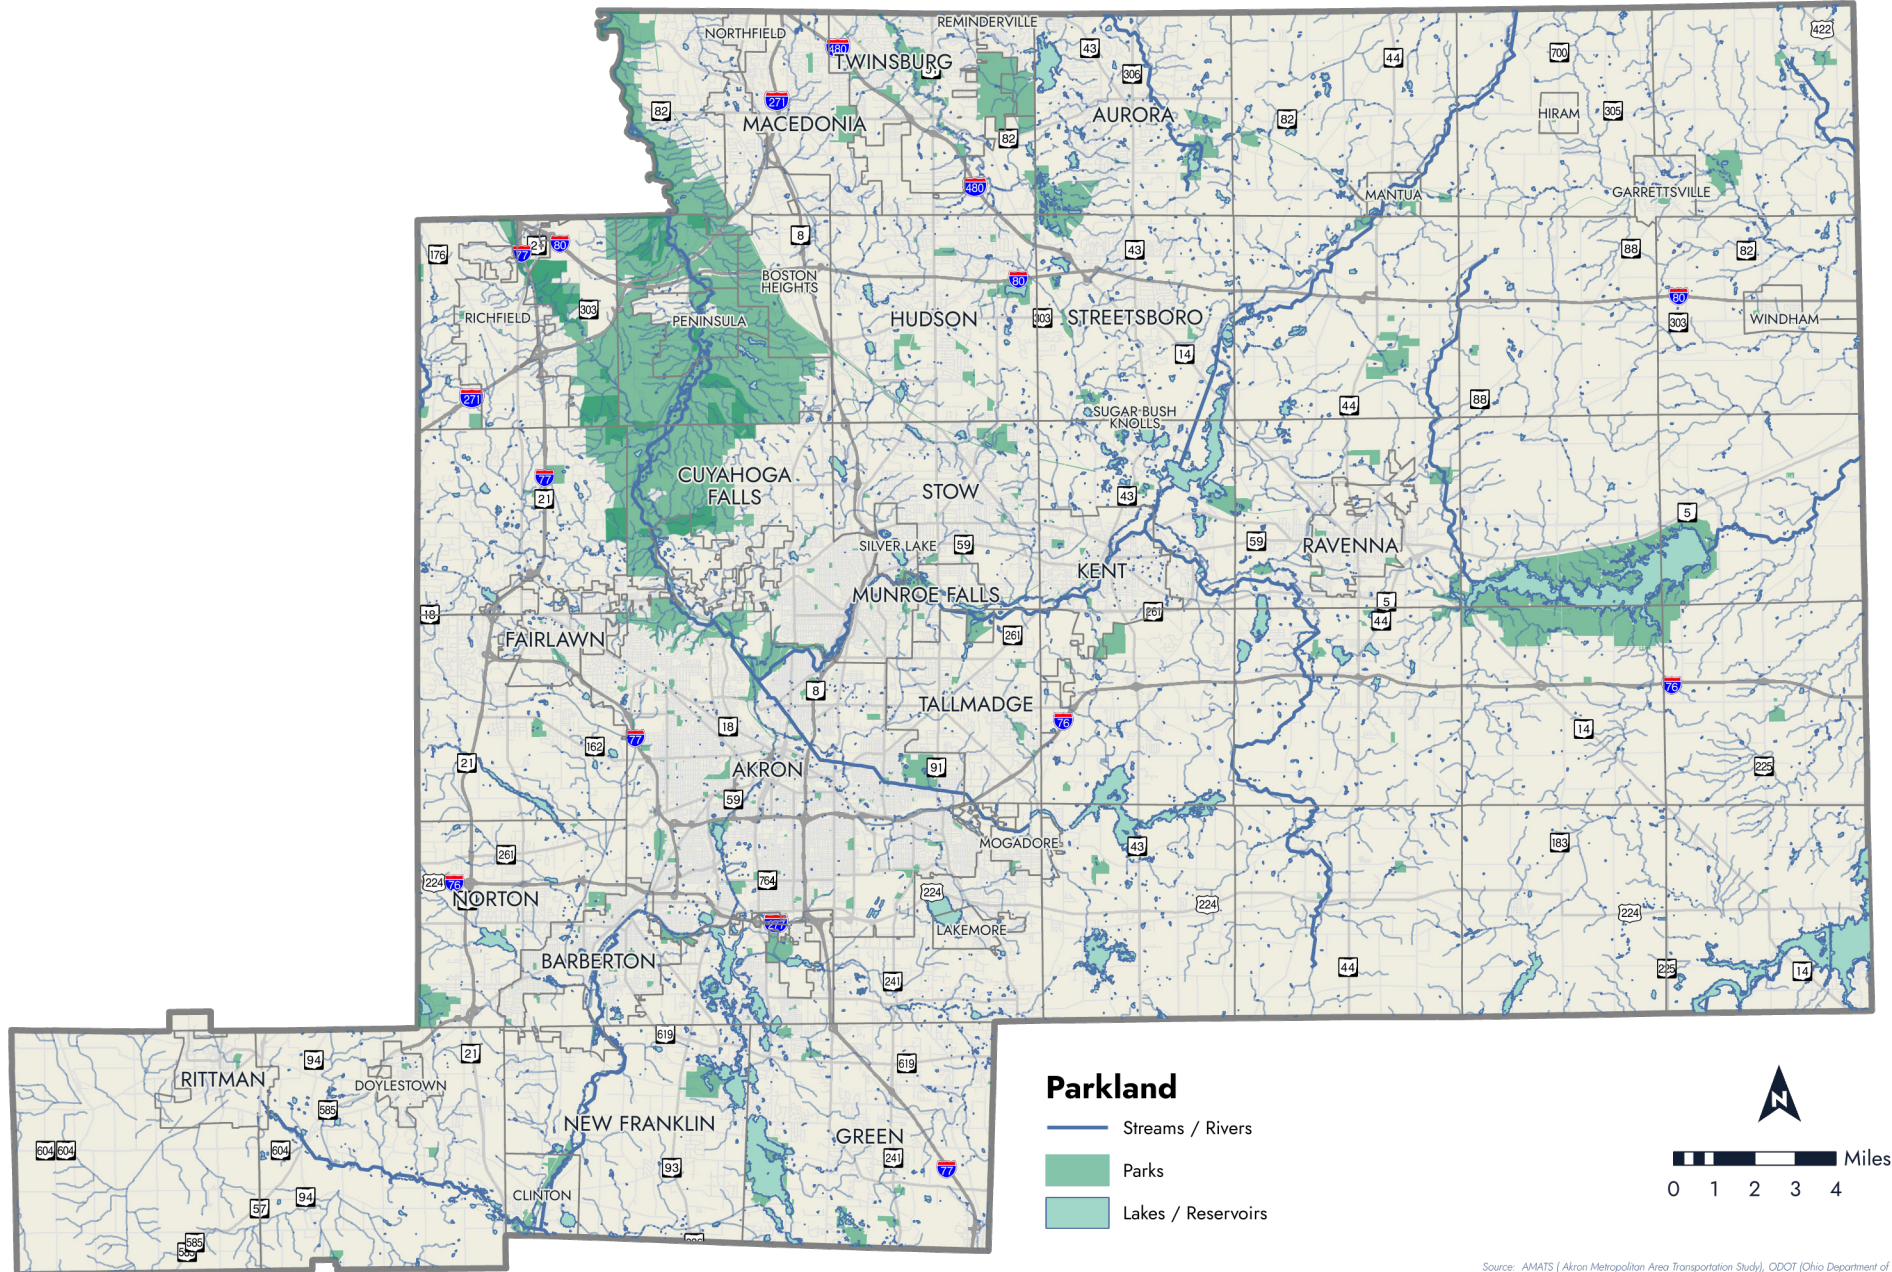

The use of Section 4(f) property can occur in the following circumstances:

1. When land is permanently incorporated into a transportation facility
2. When there is a temporary occupancy of land that is adverse in terms of the statute's preservation purpose
3. When there is a constructive use where a project's proximity impacts are so severe that the protected features of a property are substantially impaired.

The Greater Akron area is home to a number of Section 4(f) resources including the Cuyahoga Valley National Park and Portage Lakes State Park in Summit County, several state and local parks, wildlife and waterfowl preserves, and several nature preserves. The state parks in Portage County include Nelson Ledges, Tinkers Creek, and West Branch. **Map D-2** identifies the many parks, lakes, and other water bodies in the Greater Akron area.

These parkland sites are important to our communities and heritage. However, at times, transportation projects impact Section 4(f) resources and require specific measures to minimize harm or mitigate the impacts. Any potential impact on Section 4(f) land requires all possible planning to minimize harm. For this reason, it is important to consult with the Office of Environmental Services (OES) at ODOT in the early stages of planning and project development in order that complete avoidance or minimal impacts of the protected resource are given full and fair consideration.

Map D-2 | Parkland

Stormwater Management

Hydrological features that include rivers, streams, wetlands, and flood-prone areas are important for both environmental and project development/construction reasons. Rivers, streams, and wetlands are often home to sensitive plant and animal species. Project construction in, over, or near these resources can be costly and have schedule implications related to permitting requirements.

Stormwater is the runoff water that occurs when precipitation from rain or snowmelt flows over the ground that can pick up debris, litter, sand, bacteria, chemicals (like fertilizers) from lawns, and oil and gas from cars, and other pollutants. Stormwater pollution is the number one source of water pollution in the USA. Impervious surfaces like driveways, sidewalks, and streets prevent stormwater runoff from naturally soaking into the ground. Anything that enters a storm sewer system is discharged untreated into the waterbodies we use for swimming, fishing, and for providing drinking water.

The impact of storm water on transportation projects may need to be assessed in future stages of project development. Storm water management should be incorporated into the construction phase of a project to prevent the direct runoff of water containing sediment into waterways and reduce sediment entering the storm drainage system. **Map D-3** includes the AMATS area sewer system that is grouped into five categories:

- **Sewered** – this includes areas that are currently served with sanitary sewers that have been constructed and are currently in operation. There may be undeveloped tracts of land and vacant lots in these areas that are subject to improvement and will be required to connect and/or provide sanitary service.
- **Future Sewered** – these are areas that are programmed for sewers within the next 20 years. All new commercial, industrial, institutional, and residential developments in these areas shall be required to connect to the existing sanitary sewer system for the removal of sanitary wastewater from each new facility within the new development. The developer shall be required to extend new sanitary sewers from the proposed development to an existing publicly owned wastewater treatment facility.
- **On-Site Nondischarging** – these are areas where wastewater is handled and treated on the property where it's generated, rather than being sent to a municipal sewer system. This includes systems like septic tanks and other on-site treatment technologies. "Non-discharging" means that the treated wastewater is not discharged to the environment (e.g., a river or stream) or a larger sewer system. Instead, it's reused or disposed of on the property.
- **On-Site Nondischarging/POTW** – these areas contain a non-discharging sewage disposal system as described above or that will be served by a Publicly Owned Treatment Works (POTW) which includes the collection and treatment of stormwater runoff. The POTW serves as the publicly owned and operated sewage treatment plant that collects, treats, and disposes of wastewater.
- **Undeclared/No Prescription** – these are areas where wastewater or connections to the system are not properly reported or accounted for by the homeowner or property owner. There are no pretreatment programs in place which control the discharge of pollutants from various sources.

There are a number of mitigation techniques that can be used to curb stormwater runoff including grass swales, filter strips, permeable pavement, detention basins, and retention ponds. Mitigation activities are further discussed in the last section of this Appendix.

Map D-3 | Wastewater Prescription Areas

City of Akron Sewer Project

The City of Akron developed an initiative in late 2014 to address combined sewer overflows (CSOs), named *Akron Waterways Renewed! (AWR)*. AWR is a 20-year program that will reduce pollution by 2.4 billion gallons per year and help protect Akron's abundant supply of fresh water. This sewer project is the largest single investment in city infrastructure in Akron's 200-year history. The management of the CSOs, coupled with the updates to the existing sewer infrastructure in Akron, will help the City meet current EPA mandates, as dictated by the Federal Consent Decree, which was issued to the City in 2009.

The Cascade Village Storage Basin, completed in the summer of 2016, was the first project in the new construction initiative that addressed the City's Combined Sewer Overflows (CSOs). The 1.5-million-gallon tank stores overflow from sanitary and storm sewers. The overflow is then released to Akron's wastewater treatment facility.

Cascade Village Storage Basin (CSO Rack 15)

Basin Volume: 1.4 Million Gallons

Project Cost: \$ 11.4 million

Designer: AECOM

Contractor: Kenmore Const.

CM: Black & Veatch

In-Service: October 31, 2015

CD Achieve Full Operation: October 31, 2015

Combined Sewer Overflow Removed (typical year)

11.8 MILLION GALLONS

The City of Akron submitted an Integrated Plan to the EPA in August of 2015. The Integrated Plan is intended to optimize and prioritize the projects that need to be completed to meet the City's Clean Water Act obligations, provide an earlier water quality benefit than provided for in the current Federal Consent Decree, and reduce the need for future rate increases. In the meantime, the city continues to meet milestones mandated in the Federal Consent Decree.

There have been a number of projects completed since the AWR inception. The City of Akron has completed 24 of 26 projects under the Federal Consent Decree as of March 2025. The 25th project is the Northside Interceptor Tunnel that is currently under construction.

On January 23, 2025, the Northside Interceptor Tunnel team in Akron pulled off a massive feat - rotating the 450-ton Tunnel Boring Machine, named "*Elaine*," about 30 degrees to align with the next phase of tunneling. After the boring machine was turned, Elaine was carefully pushed into the starter tunnel, where final assembly is underway.

➤➤➤ A bird's-eye view highlights the Howard Street Baffle Drop Shaft's location near the Main Street Bridge. The excavation has reached 70 feet deep, steadily progressing toward its final depth of 181 feet. Once finished, this drop shaft will capture combined sewer flows from a large drainage area and direct them into the Northside Interceptor Tunnel.

As conditions of Akron's waterways continue to improve, the return of wildlife has been evident as not seen in the area for many years. The most noticeable example of this is the resurgence of the Great Blue Heron along the Cuyahoga River. To learn more about ongoing projects and the AWRs program, visit akronwaterwaysrenewed.com.

Green Infrastructure

Green infrastructure involves a variety of water management practices, such as vegetated rooftops, roadside plantings, absorbent gardens, and other measures that capture, filter, and reduce stormwater runoff. Building green infrastructure cuts down on the amount of flooding and reduces the polluted runoff that reaches sewers, streams, rivers, lakes, and oceans. Green infrastructure captures the rain where it falls. It mimics natural hydrological processes and uses natural elements such as soil and plants to turn rainfall into a resource instead of a waste. It also increases the quality and quantity of local water supplies and provides a myriad of other environmental, and economic, and health benefits. Green infrastructure elements can be incorporated into the design of roadways through various practices like using permeable pavement, bioswales, rain gardens, and street trees to manage stormwater runoff. These elements help capture, retain, and treat stormwater by reducing pollution in waterways and enhancing the overall environmental and aesthetic value of roadways.

AMATS encourages the use of green infrastructure to reduce potential negative impacts of storm water runoff through integrating the various elements mentioned here. Additionally, involving stakeholders, including residents, businesses, and local government in the design and planning process - can help ensure that green infrastructure projects are successful.

Social and Economic Impacts

When developing transportation plans, social impacts like accessibility to jobs, education, healthcare, and community connections are considered as they may change the physical layout, demographics, and sense of place in local communities. Economic impacts like job creation, business development, property values, and overall economic productivity, are all influenced by the ease and efficiency of movement within a region and determine how well a transportation system enables people to access opportunities and contribute to the economy.

Project sponsors should work with local planning agencies and conduct public outreach to determine the impacts a proposed project may have on communities and identify methods to avoid, minimize, and mitigate impacts. Specific impacts may include physical and psychological barriers, changes in land use patterns, substantial displacement of businesses and individuals, disruption of business activities, circulation patterns and access to services, changes in population densities, effects on neighborhood cohesiveness, and influence on regional construction costs.

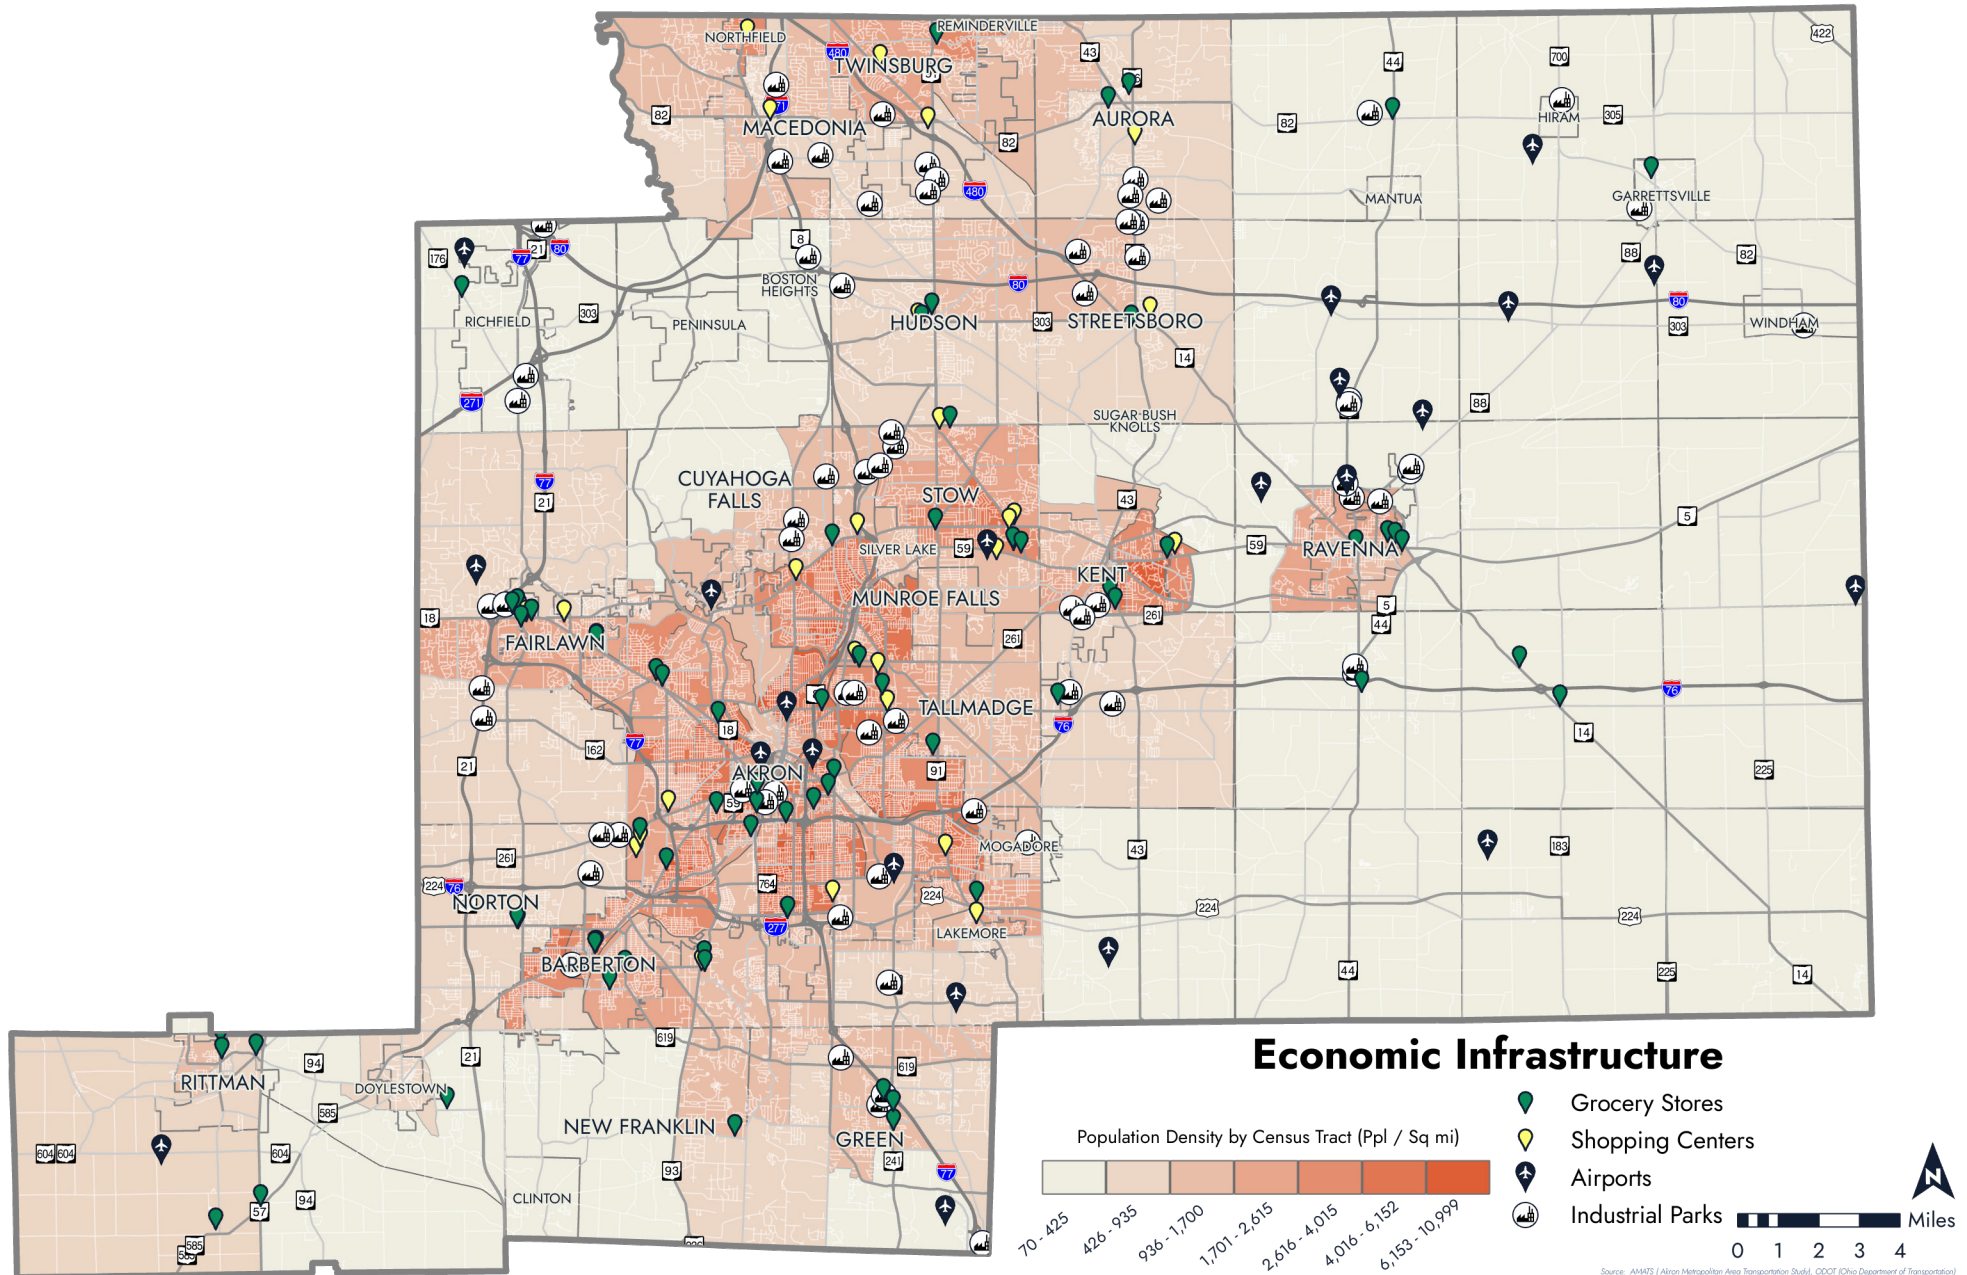

These types of community impacts should be addressed in detail through environmental assessments at later stages of planning development.

Community impacts to consider include hospitals, places of worship, nursing homes, public housing, schools, libraries, airports, industrial areas and shopping centers. These services can be viewed on the **Safety Infrastructure, Economic Infrastructure, and Social Infrastructure maps D-4, D-5, and D-6** on the following pages.

Map D-4 | Safety Infrastructure

Map D-5 | Economic Infrastructure

Cultural Resources

Cultural resources review is another requirement along the project development path for all federal and state funded projects in the AMATS area. Procedures for evaluating cultural resources for transportation projects include the Section 106 process as part of the National Historic Preservation Act and Section 4(f) of the Department of Transportation Act. The requirements under Section 106 involve following procedural guidelines to determine the number and significance of historic properties that might be affected. The requirements under Section 4(f) include the avoidance of certain protected resources, where possible, and the minimization of impacts to protected resources, where avoidance is not possible.

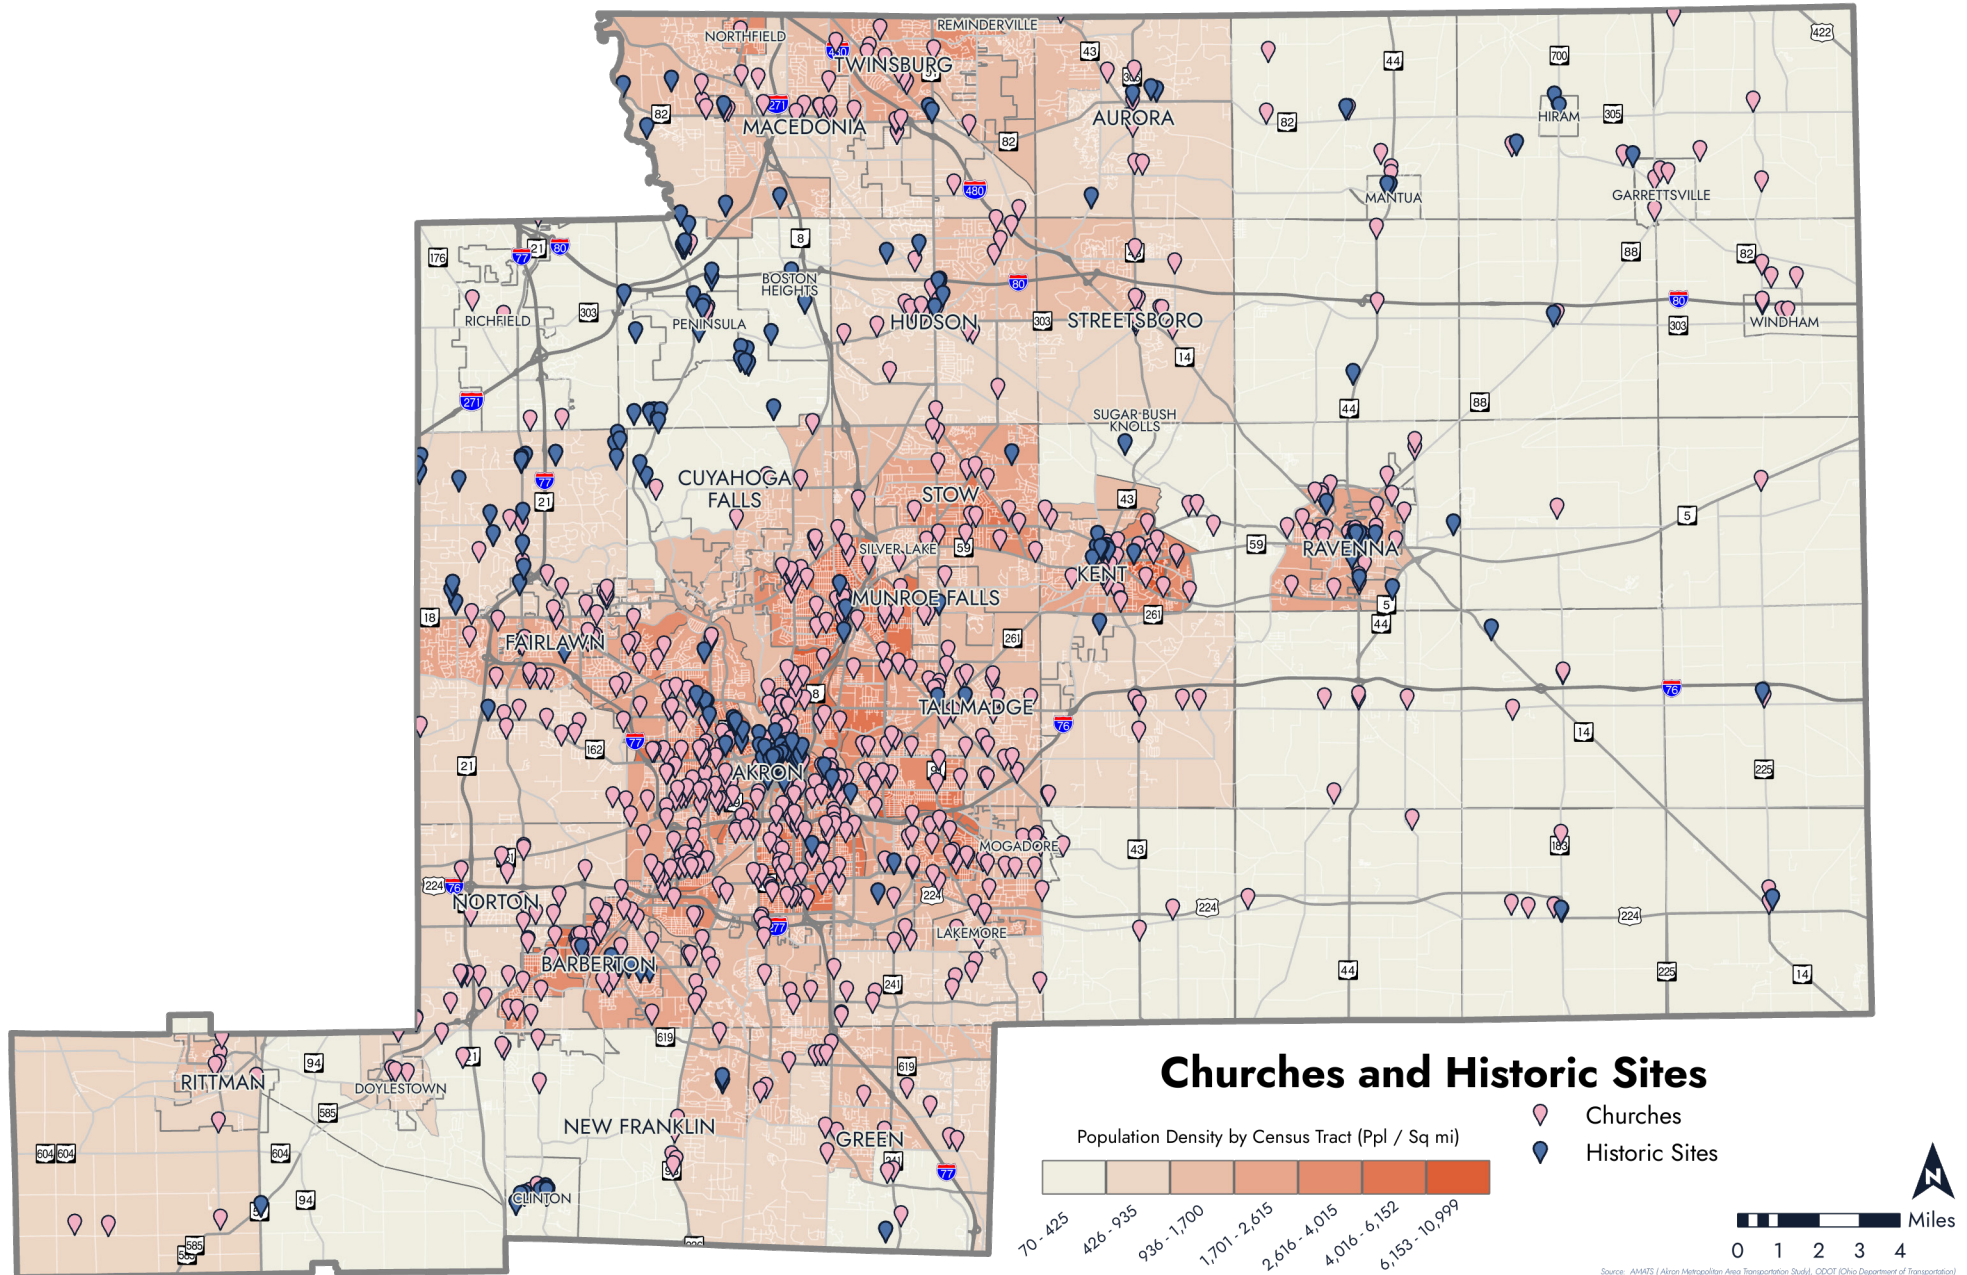

Cultural resources evaluations are planned and designed to comply with the National Environmental Policy Act (NEPA), the National Historic Preservation Act, Section 4(f) of the Department of Transportation Act, the Ohio Revised Code, and 36 CFR Part 800 - the implementing regulations for Section 106 of the National Historic Preservation Act.

The level of documentation required for processing cultural resources depends upon the type and magnitude of the project, as reflected in the Project Development Process (PDP) path for a project. The PDP defines the steps when cultural resource concurrence documents must be prepared to ensure the timely completion of the NEPA documentation and initiation of project construction.

When initiating a Section 106 review, consultation should be made with various entities, including the Federal Highway Administration (FHWA), the State Historic Preservation Office (SHPO), and the Advisory Council on Historic Preservation (ACHP), City Historic Preservation Offices, local public officials, local organizations, and the public.

The types of resources to review include National Register historic sites, cultural and archaeological sites, and cemeteries. Historic sites are spread throughout the region with the greatest concentration in the urban areas of Akron, Barberton, Cuyahoga Falls, Hudson, Kent, Village of Peninsula, Ravenna, and Twinsburg. There are 182 properties and districts listed on the National Register of Historic Places (NRHP) in Summit County, including three National Historic Landmarks. The City of Akron is the location of 60 of these properties and districts, including 2 on the National Historic Landmarks. Portage County includes 50 places on the NRHP including one place of National significance and seven places of Statewide significance. The portions of Wayne County in the AMATS area include Chippewa and Milton Townships, which includes one property listed on the NRHP. The region's churches and historic sites are shown on **Map D-6, Cultural Infrastructure**.

Map D-6 | Cultural Infrastructure

Map D-7 | Public Housing and Nursing Homes

Map D-8 | Social Infrastructure

Environmental Vulnerability Impacts

The impact of climate and weather conditions on the environment cannot be overlooked when planning for transportation projects in the Greater Akron area. AMATS developed a *Climate Resiliency Assessment* in August 2022, as a means to integrate climate adaptation considerations into the transportation decision making process. The report identifies critical roadway infrastructure that is threatened by extreme weather and outlines recommendations for integrating climate resiliency into the transportation planning process.

Extreme weather issues such as increased precipitation and temperatures may change the road network that can have devastating effects on the region's roads and bridges. Critical infrastructure damage can lead to economic disruptions, delayed emergency response times, and costly emergency repairs. Because the primary extreme weather threat in the region is precipitation that results in flooding, the majority focus on transportation infrastructure is mostly in areas adjacent to the region's floodplains. Research and best practices from around the country illustrate that storm water management upgrades such as green infrastructure and other improvements can lower the risk of costly damage from flooding.

Increased suburban sprawl would also be a cause for concern regarding increases in flooding damage. New developments that fail to implement effective storm water management practices will increase the likelihood of flash floods and costly damage to area infrastructure. Development increases flooding when more impervious surfaces (e.g., pavements, buildings) are built.

Stormwater runoff causes flooding with both peak flow and total volume of stormwater runoff and can also affect water quality by increasing the temperature of receiving water, as well as sediment, pathogens, and nutrient loads. Urban flooding can occur due to overbank flooding or when stormwater overwhelms drainage systems and ends up in basements, backyards, and streets.

In order to address design flaws before any infrastructure is replaced, local governments may want to consider **updating design guidelines** to better manage stormwater flows. Some areas may even need **stabilization projects** to prevent further damage to the hardest hit areas. Further, **installing green infrastructure** is one of the best ways to combat problems with runoff, erosion, and flooding. The **Flood Hazard Area map (Map D-9)** below identifies flood zone areas in the AMATS area.

AMATS recommends multiple strategies to incorporate resiliency planning into the transportation planning process. The strategies include prioritizing projects that are at high risk from extreme weather events and supporting roadway design changes to ensure transportation infrastructure is capable of withstanding extreme weather events.

Map D-9 | Flood Hazard Areas

Environmental Mitigation

Environmental mitigation guidelines and activities are required for projects that use federal funds and that may have adverse impacts on certain natural resources or environmental functions. Impacts are to be avoided, minimized or, as a last resort, reduced, eliminated or compensated for by replacing or providing substitute resources. AMATS is responsible for developing a discussion of environmental mitigation as part of its regional transportation planning process and the regulations of 23 CFR 450. Furthermore, the I/JA requires that the Regional Transportation Plan identifies types of potential environmental mitigation activities and potential areas to carry out these activities.

Mitigation measures are intended to help public officials make decisions about the environmental consequences with their transportation projects and related planning and to take actions that protect, restore and enhance the environment. The section below discusses general mitigation strategies for transportation plans during the Project Development Process (PDP).

Early review and analysis of project alternatives by regulatory and resource agencies combined with effective inter-office coordination are required to develop successful transportation projects. The ODOT Office of Environmental Services (OES) in cooperation with ODOT Districts, the ODOT Office of Real Estate, the ODOT Aerial Imagery Archive, and project consultants coordinate to develop mitigation projects.

A detailed assessment of individual projects in future stages of development may emphasize the importance of certain mitigation efforts, where needed. Potential environmental impacts and mitigation activities are considered for projects recommended in TO2050 through consultation with state agencies. It is the policy of AMATS to require that all federally funded projects comply with applicable environmental rules as a condition to receiving funding.

Mitigation activities should involve the five measures below:

- **Avoid** the impact altogether by not taking a certain action or parts of an action.
- **Minimize** impacts by limiting the degree or magnitude of the action and its implementation.
- **Rectify** the impact by repairing, rehabilitating, or restoring the affected environment.
- **Reduce or eliminate** the impact over time by preservation and maintenance operations during the life of the action.
- **Compensate** for the impact by replacing or providing substitute resources or environments.

Additional information about guidance in preparing compliance documentation and mitigation measures to ensure the environment is protected during transportation projects, is available at ODOT's OES website:

www.transportation.ohio.gov/wps/portal/gov/odot/programs/environmental-services

Regional Mitigation and Consultation Resources

Various mitigation resources and local environmental conservation organizations are provided in the following section. These agencies were notified of the availability of the Draft **Transportation Outlook 2050** and are encouraged to review The Plan recommendations.

Oscar

Continued from Page 1A

Who was nominated for an Oscar in costume design in 2023?

For the 2023 Oscars, Thawell was up against costume designers Atlanta Phillips for "A Complete Unknown," Larry Charney for "Cocaine Bear," Nancy Weiss and Tracey Oxman for "Gladiator II" and Linda Muir for "The Brutalist."

Who was the first Black person to win an Oscar for costume design?

Thawell is just the second Black person to win an Academy Award in the costume design category, according to Variety. The first was Ruth E. Carter who won the award in 2020 for her work on "Black Panther." She was again in 2023 for her work on the Black sequel, "Black Panther: Wakanda Forever."

Did Paul Thawell win other awards for costume design?

In 2018, Thawell was honored in Los Angeles with the American Costume Designers Award for his "Black Panther" costume designs. He also won a 2024 BIFA Academy Film Award for best costume design for "Wicked."

Home designs for "Wicked" as well as other films and television series.

Paul Thawell's other costume design accolades

Among his awards, Thawell won the 2020 Tony Award for Best Costume Design of a Musical for "Wicked" and an Emmy the same year for "The White Lotus" on HBO. He is most recently nominated on Broadway for costume design for "Death Becomes Her" and "Sonic."

Thawell's 19th Academy Award took place at the Dolby Theatre in Hollywood, hosted by Chris O'Keefe.

Known as being credited to his report.

AMATS presents two views of the area's transportation future

If you're interested in what the future holds for transportation in the Greater Akron area, then highlight March 11 through April 11 on your calendar. That's when the Akron Metropolitan Area Transportation Study (AMATS) will present the area's long-range Draft Transportation Outlook 2050 for public review and comment.

The TIP is the four-year program of highway, public transit, and active transportation projects within the Greater Akron area scheduled to receive federal funds from Fiscal Year 2026 through Fiscal Year 2029. Transportation Outlook 2050 (TO2050) is the area's long-range plan that identifies regional transportation needs and presents recommendations for projects to meet identified needs over the next 25 years. The TIP and TO2050 are key elements of the regional transportation planning process within Portage and Summit counties and northeastern Wayne County.

The Draft TIP and Draft TO2050 will be available for public comment from March 11 through April 11 at amatsplanning.org, the AMATS X and Facebook pages @AMATSPlanning, and the AMATS office in downtown Akron. The March 20 virtual meeting of the AMATS Citizens Involvement Committee will present these draft items at 6:30 p.m. To join this meeting, please visit amatsplanning.org/cic/meeting/registration or call 330-375-2436 for more information.

AMATS is committed to ensuring that individuals with disabilities are able to participate fully in public programs, services, and activities. Anyone who needs an accommodation from AMATS is invited to contact AMATS Public Information Coordinator Kerry Pate at 1 Cascade Place, Suite 1300, Akron, OH 44301. Email: (330) 375-2436 or as soon as possible. If you require TDD phone service call Ohio Relay at 800-562-0255 and they will make a connecting AMATS at (330) 375-2436.

Akron Beacon Journal - 03/09/2025

Shopping

Continued from Page 2B

heating inflation. In 2025, those finding ways to cut year spending by roughly 22.5%. That's the cumulative inflation on consumer prices since July 2020, according to the personal inflation index.

Shoppers have ample evidence that consumers are attempting to do exactly that. Discount chains such as Costco, Walmart and T.J. Maxx have seen sales rise, high-end stores, including Macy's and Nordstrom, have seen sales slide. A 2024 survey by KPMG found that 65% of consumers plan to do more discount shopping.

What you're describing is basically "downsizing," said Jeff Galt, an assistant professor of marketing at Cuyahoga Valley Community College.

But it's not just about saving money. It's about feeling good. "People are looking for ways to feel good about their purchases," said Galt.

Other shoppers are rotating through part of their list at one chain, part

package to get annual raising the price. But as a result, consumers are spending less time in each store. "Shoppers may also be gravitating to 'experience' shops," said Williams and Calkins, searching for value beyond mere brands and the most popular volume discount.

Mary Calkins, a professor and director of graduate studies in applied economics at the University of Minnesota, is studying that phenomenon, although he does not yet have hard data to prove it. Calkins notes another consumer trend, which he calls "haughtiness," meaning demand for value-priced goods to push up their prices. Consequently, and paradoxically, price is an important factor for low-price products than for higher-price alternatives. Thus, a shopper who switches stores might snag a lot of savings now than in a year or two.

Switching stores isn't the only way to save. "People are looking for the best value in private-label brands. Another might be buying private-label brands. A third might be the perfect destination for 'cheap' products. This is all about saving money. It's a good way to fight inflation when prices are fluctuating so much," said Kimberly Peltier, a personal finance expert at NextAdvisor.

had products made up 20.7% of all grocery sales in 2023 in terms of units sold, a record high. "If you switch to store brands, you're going to save 20% to 25%," Calkins said. "There's no downside."

When he said price isn't the only way to save, Calkins was talking about the best value in private-label brands. Another might be buying private-label brands. A third might be the perfect destination for "cheap" products. This is all about saving money. It's a good way to fight inflation when prices are fluctuating so much," said Kimberly Peltier, a personal finance expert at NextAdvisor.

NEWS RELEASE

FOR IMMEDIATE RELEASE: March 3, 2025

AMATS presents two views of the future

If you're interested in what the future holds for transportation in the Greater Akron area, then highlight **March 11** through **April 11** on your calendar. That's when the Akron Metropolitan Area Transportation Study (AMATS) will present the area's four-year Draft *Transportation Improvement Program* (TIP) and long-range Draft *Transportation Outlook 2050* for public review and comment.

The TIP is the four-year program of highway, public transit, and active transportation projects within the Greater Akron area scheduled to receive federal funds from Fiscal Year 2026 through Fiscal Year 2029. *Transportation Outlook 2050* (TO2050) is the area's long-range plan that identifies regional transportation needs and presents recommendations for projects to meet identified needs over the next 25 years. The TIP and TO2050 are key elements of the regional transportation planning process within Portage and Summit counties and northeastern Wayne County.

TRANSPORTATION OUTLOOK 2050

The Draft TIP and Draft *TO2050* will be available for public comment from **March 11** through **April 11** at amatsplanning.org, the AMATS X and Facebook pages - @AMATSPPlanning, and the AMATS office in downtown Akron. The **March 20** virtual meeting of the **AMATS Citizens Involvement Committee** will present these draft items at **6:30 p.m.** To participate in this meeting, please visit amatsplanning.org/cic-meeting-registration or call **330-375-2436** for more information.

Public meetings regarding the Draft *TO2050* are also scheduled at the following dates, times and locations:

Wednesday, April 2, 2025: 5:30-6:30 p.m.

Akron-Summit County Public Library, Main Library, Meeting Room 1

60 S High St, Akron, OH 44326

Thursday, April 3, 2025: 5:30-6:30 p.m.

Kent Free Library, 2nd Floor Meeting Room

312 W Main St, Kent, OH 44240

For more information about the TIP, *TO2050* and the regional transportation planning process, please click [here](#).

Public Comments

Note: The comments below are those officially received by AMATS during the Public Comment period between March 11 and April 11, 2025. Full comments are retained on file within AMATS offices.

Received 3/20:

I profess that I'm a republican. Pre COVID I was CIC quasi activist for decades. Of all government agencies interactions, AMATS was most responsive to citizen comments/concerns.

You, as the agency gave us the impression that this was our money's being responsibly returned to us as priorities dictate. In reading Signal's story I was 'disgusted' that we should aquestist [sic] to outsider's priorities, many now being challenged in law. The methodology behind past justification of priorities of expenditures have a long consensus history. We should not deviate. I respectfully challenge those outside forces to bully what we find most meritorious. If they penalize us by withholding our funds, our principles remain intact and they may be unceremoniously removed. I understand that overall planning may temporarily slow down but we should eventually recover when pendulum swings. We are the heartland of America and I would not think retribution would put back to mid nineteenth century transportation.

Received 3/28:

Dear AMATS Staff,

Thank you for your hard work compiling a mountain of data and trying to bring it to the public cohesively and clearly. Transportation planning is fraught with challenges, the least of which is the fickle nature of the people who live in our region. I am one of those fickle folks and offer the following summary of my thoughts on the matter:

What's the point,
Of trying to know,
What makes some folks,
Go to and fro?
They drive too fast,
Find walking slow,
But we've built the world,
For vehicles, you know!
We go too far,
In too little time,
That we miss the world,
And its speech sublime,
It is all about speed,
And rewarding the rich,
And pushing poor folks,
To the "unimproved" ditch.

If you can't drive a car,
And the grocery stores moved,
An occasional bus,
Ain't no disabled folk's groove.
We try to keep thinking,
That we can tweak our big system,
But the power's not there
To make the shakers and movers listen.
We've put our freight on the trucks,
Built wider roads, taller bridges,
But we've not considered the cost,
Of our fully stocked fridges.
(and all of these bridges can't span the divides
All of this road building has created- our socio-economics aside.)
Now the bill has come due,
We've raised the earth's temperature,
"But don't make us make changes."
Especially if it takes the legislature.
We are moving too slowly,
On the things that matter,
We are stuck on the former,
And we will pay for it later.

A FEW OBSERVATIONS

1. An appendix with some highlights from Outlook 2025 might be insightful.
2. There is no mention of the parking and zoning policies that incentivize private automobiles and drive development to auto-dependent, spread-out areas on the periphery of our urban areas.
3. The emphasis on maintenance is excellent, but not much thought about decommissioning the over-built areas we will not be able to maintain in the long run.
4. This general report does not seem to put much emphasis on our CLIMATE EMERGENCY. Just more of the same with a few better places to walk and ride bikes for middle-class folks. A 25-year plan must consider mitigation and avoidance of climate impacts.
5. Safe Streets for All is a huge step forward- thank you.
6. The accident, injury, and fatality data is staggering. Most of this has to do with speed. The underlying assumption is that for those highways eligible for state and federal funding, we want to maintain speeds when most drivers exceed the speed limits. Speed kills, and we seem to have baked in acceptance of 40,000 highway fatalities per year in our country. Not acceptable. (section 4)

7. No mention of “Modal Filters,” which can be used to discourage some modes of transport through walkable downtown neighborhoods. Neighborhoods are destroyed by traffic and can only be rebuilt, made more desirable, by reducing the traffic flow and speeds. (the traffic calming section is excellent)
8. The graphic on Page 28 of section 4 estimates that system preservation costs are gut-wrenching. When I see all the money being spent on bridges to “improve” the central interchange, it is simply unsustainable financially and ecologically.
9. I commend efforts to involve citizens in the planning process. Our city engineers in Kent have done an excellent job of this. I would like to suggest that a unit for high school civics classes be developed about transportation and community planning.
10. A reference to your land-use work would help. Sadly, more development continues to pave acres of land to accommodate cars for peak loads that rarely occur, only serving to induce traffic and lead to less active lifestyles.
11. The Congestion Mitigation Table on page 32 is excellent. The sad news is that expanding transit services is not likely to happen because we are spending all of our money on bridges, and none of our legislators walk or take a bus to work. (see below)
12. The most effective congestion management technique, telecommuting, has come under attack by reactionary politicians. This should be a priority of our transportation planning.
13. Too much money has been spent on safety improvements so trucks and cars can move rapidly through and between urban areas. Hundreds of millions are being spent on the central interchange, the route 8 corridor, etc, so much that this outlook assumes that transportation improvements should maintain high speeds instead of uniformly lowering them. (it is apparently un-American or even “socialistic” to think saving lives and the planet has merit.)
14. Freight needs to be on rail... Less on trucks. Truck Freight does not pay its share for the damage it does. (But their lobby is bigger than mine.)
15. Along this line, job hubs are not near where most people live. Ut-oH. Who pays? The poor people who spend inordinate amounts of their paychecks and time on simple transportation. (section 4 page 35)
16. Active Transportation is politically more neutral than sustainable transportation....I get it. Sustainable is a ONE WORLD GOVERNMENT threat..... LOL.
17. Having worked to create the Portage in Kent/Ravenna, this asset is priceless. We appreciate the support all of these multi-user paths have gotten and the difference they have made to our community’s well-being.
18. By the way, there is no such thing as “alternate” transportation. There is only transportation that is less important to lazy Americans and politically less important to the automobile industrial political complex.
19. Page 41- Great things are being done on the pedestrian network in many of our communities. I am even seeing people start to stop for pedestrians on North Water Street in Kent now that that street has had the attention of Safe Streets trained engineers. (imagine what we could do if we built one less lane of bridge, or perhaps didn’t replace every bridge for the convenience of people that want to live as far out of town as possible.)
20. Sidewalks are still the sideshow and most of our communities are clueless on getting residence to keep them walkable in the winter. It is demoralizing and Inequitable, and reduces inclusion.
21. Distracted driving makes riding bikes on many roads life-threatening.
22. E-Scooters and E-Bikes can be a menace. Uggh. I get their appeal though, and if they reduce cars, can be helpful.
23. Transit....Never enough, and it never will be. Excellent observation that the incomplete and unmaintained...all year sidewalk network also discourages use. Long headways make even the best transit in Portage County ineffective for anyone who isn’t transit-dependent. Time is Life, and if you have enough money, your life is apparently worth more.
24. Rail....Trains are nice....but so much freight isn’t shipped on them from a local basis that we have a river of truck on our interstates... What is the long-term thinking about the ecological and safety differences between rail and trucking? Unfortunately both of these industries have lobbyists that seem to own our legislatures.
25. Context Sensitive Design.... Is a good way to think about streets. I think making the distinction between a street, where many different types of users are accommodated in the design as opposed to limited access highways. Unfortunately, many people think that state routes are not streets and that anyone on or near them is a nuisance. Efforts to reduce traffic speeds by design are good; I have been a proponent of traffic calming for decades, but with the rise of distracted driving and the prevalence of speeding, I do not see us gaining ground on a fair and sustainable road network.
26. I am sobered by the targets for improving the safety of our road network. (page 62) Speed kills but we are not seriously reducing the speeds of our roadways.
27. Travel Time Reliability and Congestion Mitigation as benchmarks both encourage more Vehicle Miles Traveled. People make decisions about where to live based on the magical 30-minute average commute, which impacts land use patterns. Creating a sustainable region and reducing death by transport will require us to stop encouraging single occupancy vehicle utilization.

28. Active Transportation Section is encouraging. (page 80-84) These types of projects need to receive a much greater portion of the regional transportation spending.
29. Why are we widening roads (Exhibit A-1)? We are in a climate crisis. We need to reduce consumption of oil, steel, rubber, and every other material.
30. Map C-4 Carless Households. Observation. It is the poor people or retired people who are carless. We need to focus our energies on making every community be as car-less as possible.
31. Water quality....Cities around the country are dealing with the impact of road salt on not only the biome but also the drinking water supplies. We need to be thinking about mitigating this threat in our planning.

In conclusion, I understand the complexity of the planning process and am always impressed with the amount of work that goes into these comprehensive outlooks. While I see positive steps in the right direction, I do not think that the Climate Emergency we are in allows for business as usual. I understand the political implications of being more forthright about this matter, but we fail to respect the future by fiddling while Rome burns.

Received 3/31:

Thanks to you and the AMATS team for the great work on the Transportation Outlook 2050 document. It was well written.

I reviewed the document, focusing in particular on the sections on Active Transportation. Please see my comments below:

1. Editorial - page 7 - "Jane's Walk — Jane's Walk is a global walking initiative held annually on the first weekend in May. The initiative began in Toronto in 2007 to honor the legacy and ideas of urban planner Transportation Outlook 2045 and writer, Jane Jacobs. Every year, cities around the world participate in the Jane's Walk festival of free walking tours that get people to explore their cities, tell stories about their neighborhood and connect with neighbors." (Remove extra text "Transportation Outlook 2045")
2. Editorial - page 9 - "Reporting on Progress - AMATS kept each of its committees—including the Citizens Advisory Committee—apprised of TO2050s progress at each scheduled meeting during the Plan's development." Comment: Should "Advisory" be changed to "Involvement"?
3. Question - page 81 - Safe Routes to School - There is a reference to the five E's: Engineering, Education, Enforcement, Encouragement, and Evaluation. In 2023, the League of American Bicyclists updated the five E evaluation categories for the Bicycle Friendly America program, replacing "Enforcement" with "Equity and Accessibility". Do you know if the Safe Routes to School categories were also updated at that time? I realize the organizations may be using a different set of 5 E's now, but I wanted to point out this change in case it is relevant.

I plan to stop by the public meeting in Akron on Wednesday, so I hope to see you there.

Thank you.

Received 4/3:

Hello Matt, Matt, and Curtis,

It was great to meet you all at the TO 2025 public meeting yesterday. I would like to formally submit a comment that the Veterans Trail project (MAP ID 3 in Bicycle and Pedestrian Recommendations) currently lists the Freedom Trail as the southern terminus. It would be great to extend the Veterans Trail to Northside Station for a connection between the Veterans Trail and the Freedom Trail to the Towpath Trail. Would it be possible to include this extension in the Transportation Outlook 2025 plan?

Thank you very much.

Follow-up comment #1 related to initial request and AMATS replies (Received 4/4):

Hello Matt,

Thank you for following up on the Veterans Trail extension and to Amelia for updating the map. The route map you sent appears to be the route that I was proposing. On Summit County Parcel Viewer, METRO RTA owns parcels 6859808 and 6761684, which seem to align with the pink line on the graphic. This will be a convenient connection between three major regional trails just outside of Downtown Akron.

Do you have access to the Akron Secondary Line Trail Plan from 2005? This section is listed on pages 1-3 of Appendix C - Concept Plan in that document. Things may have changed since 2005, but that could be another good resource to cross-reference.

Thank you again for considering this connection. I appreciate your help. Have a great weekend!

Follow-up comment #2 related to initial request and AMATS replies (Received 4/4):

On the east end of that connection, the track from North Side goes about 30 ft beneath the CSX / Akron Secondary Line elevated railway. The 2005 study routed the trail up to North Ave, and connected to the Veterans Trail on Eastwood Ave. Please see attached. I think that route was chosen both for its connection to Arlington Street and a more favorable grade for the trail.

Follow-up comment #3 related to initial request and AMATS replies (Received 4/4):

First, congrats to Austen for getting AMATS to recognize this connection in their plans. That is a HUGE accomplishment! TASCforce has been advocating for the connection to Northside station forever and getting a fair amount of pushback from SMP, Metro RTA, CVSR, and City of Akron. By AMATS including it in their plan, it now has some credibility. That's great! And, not only does this connect the Veterans Trail and Freedom Trail to the Northside Station - and thus the Tow Path Trail - it also connects both of these trails to the RCHT by virtue of existing bike lanes on North Arlington Avenue.

The trick is, how does the ASL connect to Northside Station? It took us a long time to figure out, it doesn't. The southern end of the ASL was actually connected to the CSX tracks that are still active just east of N Arlington. (See first link below.) But, as Mike has pointed out, the 2005 proposed routing the trail down to Home Ave, across N Arlington, and then through the parcel owned by City of Akron to connect to the Sandyville Line leading to NS station. Bill and I had a meeting in 2021 where the City of Akron agreed to "flag" that parcel as a potential trail before it could be sold. I hope that flag is still in place. The purpose of that meeting with COA was to discuss bike lanes on North Arlington Ave. (See second link below.)

But in another meeting with Environmental Design Group in 2024, we learned of a 2011 study they did that considered other options for connecting the Veterans Trail to the Freedom Trail and the NS station. (See third link below.) My personal preference is shown on slide 3.

Admittedly, this all gets a little complicated. But the exciting thing here is that there is an opportunity to connect the Veterans Trail to the Freedom Trail, the Northside Station, downtown Akron, the TowPath Trail, and the Rubber City Heritage Trail. It also provides the opportunity to open views of and access to the Little Cuyahoga River and create a trail loop around downtown Akron. I get goose bumps just thinking about it!

It would be great if we could arrange a meeting with AMATS, City of Akron, Cuyahoga Valley Scenic Railway, Summit MetroParks, and Metro RTA to discuss this tremendous opportunity.

Appendix F | Resolution of Approval

AKRON METROPOLITAN AREA TRANSPORTATION STUDY

RE: Resolution 2025-07 - Reaffirming the Approval of the Regional Transportation Plan and the Transportation Improvement Program, and Affirming the Consistency between the Regional Transportation Plan, the Transportation Improvement Program, and the State Implementation Plan

DATE: May 1, 2025

In order to remain certified as a Metropolitan Planning Organization (MPO), AMATS must satisfy various requirements each year. These requirements include:

1. Reaffirming the approval of *Transportation Outlook*, the area's 2050 Regional Transportation Plan.
2. Reaffirming the approval of the Transportation Improvement Program (TIP).
3. Affirming the consistency between *Transportation Outlook*, the Transportation Improvement Program, and the State Implementation Plan (SIP) for improving air quality.

Transportation Outlook, the AMATS area's current Regional Transportation Plan is scheduled for adoption by the AMATS Policy Committee on May 15, 2025. Federal planning requirements under the *Infrastructure Investment and Jobs Act (IIJA)* state that the regional transportation plan must be reviewed and updated every four years in air quality non-attainment or maintenance areas. Consequently, the area's next regional transportation plan update is scheduled for adoption by the Policy Committee in 2029.

The AMATS Policy Committee anticipates approving the FY 2026-2029 TIP on May 15, 2025. The TIP is typically updated every two years and is comprised of projects drawn from *Transportation Outlook*, the area's Regional Transportation Plan.

Because AMATS is part of the eight-county Cleveland-Akron-Lorain air quality non-attainment area, its Regional Transportation Plan and TIP must also contain an air quality analysis that shows that emissions from mobile sources will not exceed the allowable limits for ozone and fine particulate matter (PM_{2.5}) that have been established by the Ohio Environmental Protection Agency (OEPA) in the State Implementation Plan (SIP). To that end, an air quality analysis

entitled, *Ozone and PM2.5 Conformity Analyses for Transportation Plans, Programs, and Projects in the Cleveland-Akron-Lorain, Ohio Metropolitan Area* was completed. This air quality document demonstrates that *Transportation Outlook* and the TIP are in compliance with the applicable air quality standards.

ODOT requests that AMATS annually reaffirm its approval of the area's Regional Transportation Plan and TIP, and that AMATS affirm the consistency of both documents with the SIP, in a single resolution. Resolution 2025-07 meets this objective.

The Staff recommends that Resolution 2025-07 be approved.

RESOLUTION NUMBER 2025-07

**OF THE METROPOLITAN TRANSPORTATION POLICY COMMITTEE
OF THE AKRON METROPOLITAN AREA TRANSPORTATION STUDY**

**REAFFIRMING THE APPROVAL OF THE REGIONAL TRANSPORTATION PLAN
AND THE TRANSPORTATION IMPROVEMENT PROGRAM, AND AFFIRMING
THE CONSISTENCY BETWEEN THE REGIONAL TRANSPORTATION PLAN, THE
TRANSPORTATION IMPROVEMENT PROGRAM, AND THE STATE
IMPLEMENTATION PLAN**

WHEREAS, the Akron Metropolitan Area Transportation Study (AMATS) is designated as the Metropolitan Planning Organization (MPO) by the Governor, acting through the Ohio Department of Transportation (ODOT) and in cooperation with locally elected officials in Summit and Portage Counties, and the Chippewa Township and Milton Township areas of Wayne County; and

WHEREAS, AMATS has, pursuant to 23 United States Code 134 and 49 United States Code 5303, prepared *Transportation Outlook*, the area's 2050 Regional Transportation Plan, which was approved on May 15, 2025; and

WHEREAS, AMATS has, pursuant to Title 23 United States Code Section 134 prepared the Transportation Improvement Program for Fiscal Years 2026 through 2029, which was approved on May 15, 2025; and

WHEREAS, the Transportation Improvement Program for Fiscal Years 2026-2029 is consistent with *Transportation Outlook*, the area's 2050 Regional Transportation Plan; and

WHEREAS, Section 176(c)(3) of the Clean Air Act Amendments of 1990, requires that the MPO make a determination that the Regional Transportation Plan and the Transportation Improvement Program are in conformity with respect to the State Implementation Plan for attainment of the National Ambient Air Quality Standards (NAAQS); and

WHEREAS, a quantitative air quality analysis of *Transportation Outlook* and the Transportation Improvement Program for Fiscal Years 2026 through 2029 was completed for both ozone and fine particulate matter (PM_{2.5}), in accordance with the requirements specified by the *Infrastructure Investment and Jobs Act (IIJA)* and the Clean Air Act Amendments of 1990; and

WHEREAS, this quantitative air quality analysis entitled, *Ozone and PM_{2.5} Conformity Analyses for Transportation Plans, Programs, and Projects in the Cleveland-Akron-Lorain, Ohio Metropolitan Area SFY 2026 – 2029 Transportation Improvement Programs* demonstrates that *Transportation Outlook* and the Transportation Improvement Program for Fiscal Years 2026 through 2029 are in conformity with the applicable air quality standards of the State Implementation Plan.

RESOLUTION NUMBER 2025-07 - Continued

NOW THEREFORE BE IT RESOLVED:

1. That this Committee reaffirms its approval of *Transportation Outlook* as the Regional Transportation Plan for Summit and Portage Counties and the Chippewa and Milton Township areas of Wayne County.
2. That this Committee reaffirms its approval of the Transportation Improvement Program (TIP) for Fiscal Years 2026 and 2029 as the program of projects being implemented with federal transportation funds in Summit and Portage counties and the Chippewa and Milton Township areas of Wayne County.
3. That this Committee affirms the consistency between the Transportation Improvement Program (TIP) for Fiscal Years 2026 through 2029 and *Transportation Outlook*.
4. That this Committee affirms the consistency between *Transportation Outlook* and the State Implementation Plan (SIP) for air quality.
5. That this Committee authorizes the Staff to provide copies of this Resolution to the appropriate agencies as evidence of action by the Metropolitan Transportation Policy Committee.

RE: Resolution 2025-08 - Certification of the Urban Transportation Planning Process

DATE: May 1, 2025

In order to remain a Metropolitan Planning Organization (MPO), AMATS must satisfy various requirements each year. One requirement is for the Policy Committee to certify that the urban transportation planning process is being carried out in compliance with all applicable federal requirements.

Every four years, the US DOT certifies whether AMATS is operating the planning process according to federal guidelines. Four years ago, AMATS underwent its federal certification review. At that time, US DOT certified that AMATS conduct the planning process for the ensuing four years. Presently, the US DOT has now returned for another certification review.

One federal requirement pertaining to Title VI of the Civil Rights Act of 1964, requires that AMATS shall not, on the basis of race, color, religion, national origin or sex, exclude anyone from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving federal financial assistance. Consequently, it is the policy of AMATS to provide an environment of nondiscrimination and equal opportunity in employment. The area's regional transportation policies, plans, and programs contained in the Regional Transportation Plan (*Transportation Outlook*) and the Transportation Improvement Program are also compliant with Title VI of the Civil Rights Act of 1964.

The Staff recommends that Resolution 2025-08 be approved.

RESOLUTION NUMBER 2025-08

OF THE METROPOLITAN TRANSPORTATION POLICY COMMITTEE OF THE AKRON METROPOLITAN AREA TRANSPORTATION STUDY

CERTIFICATION OF THE URBAN TRANSPORTATION PLANNING PROCESS

WHEREAS, the Akron Metropolitan Area Transportation Study (AMATS) is designated as the Metropolitan Planning Organization (MPO) by the Governor, acting through the Ohio Department of Transportation (ODOT) and in cooperation with locally elected officials in Summit and Portage Counties, and the Chippewa Township and Milton Township areas of Wayne County, as evidenced in the Agreement of Cooperation, Number 32963, between ODOT and the City of Akron finalized on April 5, 2019; and

WHEREAS, the federal regulations pertaining to Urban Transportation Planning, published as 23 CFR 450.334, require the MPO to certify that the cooperative metropolitan transportation planning process is in conformance with these regulations; and

WHEREAS, the federal regulations published as 23 CFR 450 require that the metropolitan transportation planning process shall include activities to support the development and implementation of a regional transportation plan and a transportation improvement program and subsequent transportation planning activities to the degree appropriate for the area; and

WHEREAS, these activities have been acted upon by the MPO by separate Resolution Number 2025-07, signed and dated May 15, 2025; and

WHEREAS, the federal regulations published as 23 CFR 450.334 also require that the planning process be carried out in accordance with:

- a. Title 23 United States Code (U.S.C.) Section 134 and Title 49 U.S.C. 5303 concerning metropolitan planning for Highways and Transit, respectively;
- b. Sections 174 and 176 (c) and (d) of the Clean Air Act, as amended (42 U.S.C. 7504, 7506 (c) and (d)) and Title 40 Code of Federal Regulations (CFR) part 93 in non-attainment areas;
- c. Title VI of the Civil Rights Act of 1964, as amended (42 U.S.C. 2000d-1) and 49 CFR part 21;
- d. 49 U.S.C 5332, prohibiting discrimination on the basis of race, color, creed, national origin, sex, or age in employment or business opportunity;
- e. Section 1101(b) of the *Infrastructure Investment and Jobs Act* (Pub. L. 117-58) and 49 CFR part 26 regarding the involvement of disadvantaged business enterprises in USDOT-funded projects;
- f. 23 CFR part 230, regarding the implementation of an equal employment opportunity program on federal and federal-aid highway construction contracts;
- g. The provisions of the Americans with Disabilities Act of 1990 (42 U.S.C. 12101 *et seq.*) and 49 CFR parts 27, 37, and 38;
- h. The Older Americans Act, as amended (42 U.S.C. 6101), prohibiting discrimination on the basis of age in programs or activities receiving federal financial assistance;

RESOLUTION NUMBER 2025-08 - Continued

- i. Section 324 of Title 23 U.S.C. regarding the prohibition of discrimination based on gender; and
- j. Section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) and 49 CFR part 27 regarding discrimination against individuals with disabilities.

WHEREAS, Title VI of the Civil Rights Act of 1964 requires that AMATS shall not, on the basis of race, color, religion, national origin or sex, exclude anyone from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving federal financial assistance; and

WHEREAS, in accordance with the *Infrastructure Investment and Jobs Act (P.L. 117-58)*, AMATS, as a Transportation Management Area, is carrying out its planning responsibilities under the applicable provisions of federal law.

NOW THEREFORE BE IT RESOLVED:

1. That this Committee certifies, in consideration of the requirements listed herein and to the degree appropriate for the size of the area and the complexity of its transportation system, that the urban transportation planning process is being carried out in compliance with all applicable federal requirements.
2. That this Committee authorizes the Staff to implement and provide copies of the AMATS Title VI Civil Rights Program Procedures and Documentation, as amended.
3. That this Committee authorizes the Staff to provide copies of this Resolution to the appropriate agencies as evidence of action by the Metropolitan Transportation Policy Committee.

AKRON METROPOLITAN AREA TRANSPORTATION STUDY

MEMORANDUM

TO: Policy Committee Members
Technical Advisory Committee Members
Citizens Involvement Committee Members

FROM: AMATS Staff

RE: Resolution 2025-09 – Approving the FY 2026 Transportation Planning Work Program and Budget

DATE: May 1, 2025

Executive Summary

This memorandum discusses the activities and budget for transportation planning in the Akron Metropolitan Area for the state fiscal year beginning July 1, 2025. The purpose of this resolution is to approve the Transportation Planning Work Program and Budget.

Annually, the AMATS Policy Committee adopts a Transportation Planning Work Program and Budget (Work Program) for the upcoming fiscal year. A draft of the Fiscal Year 2026 Work Program was approved by the Policy Committee at its meeting on February 13, 2025, and it was subsequently submitted to ODOT for review and comment. ODOT and the Federal Highway Administration (FHWA) have reviewed the draft Work Program. The major elements of the Work Program remain the same as the version presented to, and approved by, the Policy Committee in February.

The major work products that are to be completed during FY 2026 include the following:

- **Maintain the new FY 2026-2029 Transportation Improvement Program**
- **Traffic Counting Program** – The staff is expected to complete over 200 counts on regional roadways and provide this data to the public. Counts are also completed by member request.
- **Participate in the Statewide CMAQ Discretionary Funds Program** - AMATS will continue to work with ODOT and the other Metropolitan Planning Organizations (MPOs) to select projects for the CMAQ Program.
- **Continue implementation of the Infrastructure Investment and Jobs Act (IIJA)**
- **Provide the Annual Report on Roadway Congestion**
- **Direct the Gohio Commute and Air Quality Advocacy Programs** – The staff will utilize a multimodal approach to promote modes of travel that reduce the use of single-occupancy vehicles.

- **Pavement Condition Data Collection and Analysis Program** – continue the development and analysis of pavement conditions.
- **Begin work on the next round of Connecting Communities Planning Grants**
- **Develop an update to the SS4A Action Plan**

AMATS member communities receive approximately \$20 million annually in several funding categories to be used for highway, transit and enhancement improvements. AMATS is the federally mandated conduit for these funds.

It has been estimated that \$1,471,777 in federal Consolidated Planning Grant (CPG) funds will be available to AMATS for planning activities in FY 2026. CPG funds must be matched by state and local funds at a percentage rate of 80/10/10, yielding an initial budget of \$1,839,722. Any remaining funds from this fiscal year (FY 2025) will be carried over on July 1 and may be used through December 31, 2025.

The following table (Table 1) entitled *AMATS FY 2026 Work Program – Funding by Source* summarizes the budget that is to be included in the FY 2026 Work Program. This budget includes an expenditure of \$2,719,722 to support the AMATS staff and its activities. Along with METRO RTA and PARTA, the budget for regional transportation planning totals \$3,609,722.

In addition, total annual dues for FY 2026 will be \$191,331. The attached *AMATS Local Share Calculation* table (Table 2) shows each member's dues for the upcoming fiscal year. Local share dues are used to match CPG funding as well as cover delayed expenses and reimbursements not immediately paid by ODOT. Local share amounts for individual members reflect the US Census 2020 population figures, charged per capita, by previous agreement of the Policy Committee.

Congestion Mitigation and Air Quality Improvement (CMAQ) Program funds for staff air quality planning activities must be matched with appropriate funding where applicable. Per ODOT's instructions, Toll Revenue Credit (TRC) is applied to portions of the staff CMAQ air quality planning activities.

Staff Recommendation

Attached is Resolution 2025-09 for your review and consideration. This resolution approves the final FY 2026 Transportation Planning Work Program and Budget and authorizes the staff to collect annual dues. The staff will adjust the FY 2026 budget once the final carryover balances from FY 2025 are known in July. The Policy Committee's approval is requested.

RESOLUTION NUMBER 2025-09

**OF THE METROPOLITAN TRANSPORTATION POLICY COMMITTEE
OF THE AKRON METROPOLITAN AREA TRANSPORTATION STUDY**

**APPROVING THE FISCAL YEAR 2026 TRANSPORTATION PLANNING WORK
PROGRAM AND BUDGET**

WHEREAS, the Akron Metropolitan Area Transportation Study (AMATS) is designated as the Metropolitan Planning Organization (MPO) by the Governor, acting through the Ohio Department of Transportation (ODOT) and in cooperation with locally elected officials in Summit and Portage Counties and the Chippewa Township and Milton Township areas of Wayne County; and

WHEREAS, this Committee annually reviews and approves a Work Program and Budget for the continuation of the transportation planning process; and

WHEREAS, this Committee has reviewed the Transportation Planning Work Program for Fiscal Year 2026 and has found it to be consistent with local, State and Federal transportation planning priorities.

WHEREAS, this Committee authorizes staff to make changes to the Transportation Planning Work Program work elements, when necessary, that will not change the intent of the activity of the Transportation Planning Work Program and Budget.

NOW THEREFORE BE IT RESOLVED:

1. That this Committee approves the Fiscal Year 2026 Transportation Planning Work Program.
2. That this Committee approves the provisional Fiscal Year 2026 regional transportation planning budget totaling \$3,609,722 as contained in the Fiscal Year 2026 Work Program.
3. That this Committee approves a FY 2026 local share of \$191,331 in order to match the federal funds in support of the AMATS budget, as discussed in the attached memorandum.
4. That this Committee approves the collection of \$191,331 in annual dues from member communities as shown in the attached table entitled *AMATS Local Share Calculation SFY 2026 Work Program*.
5. That this Committee authorizes the Staff, without further action by this Committee, to adjust the provisional FY 2026 Budget as necessary to reflect the final carryover balances from FY 2025.
6. That this Committee authorizes the AMATS staff to adjust the FY 2026 Transportation Planning Work Program as previously specified to make such changes to the work element budgets as are needed to satisfy clarifying comments from the Ohio and U.S. Departments of Transportation, or to make such changes to fully utilize funds and minimize carryover, but which do not change the intent of the activity.

7. That this Committee authorizes the Staff to provide copies of this Resolution to the appropriate agencies as evidence of action by the Metropolitan Planning Organization.

Larry D. Jenkins, Jr., P.E., P.S., 2025 Chairman
Metropolitan Transportation Policy Committee
